INSPECTION STATUS

ENFORCEMENT STATUS

ON 1/10/80, UNSEALED PENETRATIONS THROUGH FIRE BARRIER WALLS WERE OBSERVED IN THE DIESEL GENERATOR ROOM AND IN THE CONTROL ROOM WITHOUT THE BENEFIT OF FIRE WATCH IN THE AFFECTED AREAS.
(8002 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

MANAGERIAL ITEMS:

+ A group of National Security Agency members toured the facility on March 19, 1980.

+ Curtis J. Cowgill, III, Reactor Resident Inspector, has been designated to relieve E. G. Greenman as Senior Resident Inspector.

PLANT STATUS:

+ The reactor operated at a nominal 100 percent power during the month. A 4-day outage was commenced on 3/7/80 for a recirculation pump seal replacement. The unit was shutdown on 3/21/80 for a planned 104 day refueling outage. Representative offgas and combined Unit 2 and Unit 3 stack gas release rates were 12,100 microcuries per second and 1010 microcuries per second, respectively.

+ LAST IE SITE INSPECTION DATE: 3/31/80

+ INSPECTION REPORT NO: 50-277/80-05

SUMMARY

INSPECTION SUMMARY

+ 50-277/79-21 - Sep 17-21: Routine unannounced inspection by a region-based inspector of radiation protection including licensee action on IE Circulars, supplies and equipment, training, exposure control, respiratory protection, posting and control, surveys, and radioactive material control. Upon arrival a tour of the radiation control area was conducted to observe radiation safety practices. Noncompliance: One (Failure to evaluate exposures to airborne activity).

+ 50-277/80-04 - Feb 23, 25-28: Special onsite regular and backshift inspection by the resident inspectors (26 hours). Areas inspected included circumstances of the valving out of a seismically qualified air supply to five Unit 3 containment ventilation valves, a blocking error which resulted in valving out the air supply to the valve disc seals for two valves, valve modifications, and followup on prior associated LERs. Noncompliances: Three (Failure to establish adequate approved procedures to assure seismically qualified air supply systems for five containment isolation valves; Failure to take adequate and timely corrective action to assure that containment ventilation valves would not be opened beyond the point whereby closure against post-LOCA conditions could be assured; and, Failure to follow procedures - four examples related to modifications and the blocking and permit system).

+ 15000039/80-01 - Jan 31-Feb 1: Chem-Nuclear Waste disposal site, Barnwell, South Carolina for unannounced inspections of licensee-shippers. Areas inspected included each licensee-shipper vehicle inspection for compliance with Department of Transportation (DOT) and NRC regulations as follows: (1) shipping paper requirements; (2) DOT Placarding requirements; (3) radiation levels; (4) removable contamination; (5) DOT marking and labeling requirements for packages; (6) DOT and NRC requirements for external package features; and, (7) prohibited articles or contents. Noncompliances: None.

+ 15000039/80-2A - Feb 6-8: Chem-Nuclear Waste disposal site, Barnwell, South Carolina for unannounced inspections of licensee-shippers. Areas inspected included each licensee-shipper vehicle for compliance with Department of Transportation (DOT) and NRC regulations as follows: (1) shipping paper requirements; (2) DOT Placarding requirements; (3) radiation levels; (4) removable contamination; (5) DOT marking and labeling requirements for packages; (6) DOT and NRC requirements for external package features; and, (7) prohibited articles or contents. Noncompliances: None.

REPORTS RECEIVED FROM LICENSEE

INSPECTION STATUS

ENFORCEMENT STATUS

INTAKES IN EXCESS OF THOSE WHICH WOULD RESULT FROM INHALATION FOR 2 HOURS IN A DAY AT UNIFORM CONCENTRATIONS SPECIFIED IN APPENDIX B, TABLE I, COLUMN 1 OF 10 CFR 20 WERE NOT MADE FOR 3 INDIVIDUALS EXPOSED ON 9/18/79.
(7923 INFRACTION)

ON 1/10/80, UNSEALED PENETRATIONS THROUGH FIRE BARRIER WALLS WERE OBSERVED IN THE DIESEL GENERATOR ROOM AND IN THE CONTROL ROOM WITHOUT THE BENEFIT OF FIRE WATCH IN THE AFFECTED AREAS.
(8002 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

+ A startup transformer tripped on 3/5/80 due to spurious initiation of a fire protection deluge system. Failure of one of the loads to shift to a backup power supply resulted in a containment isolation signal. During resetting of the signal, main steam isolation valve began to drift shut due to isolation of the instrument nitrogen supply and a reactor trip resulted.

MANAGERIAL ITEMS:

+ A group of National Security Agency members toured the facility on March 19, 1980.

+ Curtis J. Cowgill, III, Resident Reactor Inspector, has been designated to relieve E. G. Greenman as Senior Resident Inspecter.

PLANT STATUS:

+ The reactor operated at a nominal 100 percent power during the month. One reactor shutdown occurred on 3/5/80 following loss of a transformer. The planned outage continued until 3/116/80 as repairs to isolation valves in the RHR and RCIC system were accomplished. Representative offgas and combined Unit 2 and Unit 3 stack gas release rates were 3920 microcuries per second and 1010 microcuries per second, respectively.

+ LAST IE SITE INSPECTION DATE: 3/31/80

+ INSPECTION REPORT NO: 50-278/80-05

SUMMARY

INSPECTION SUMMARY

+ 50-278/79-23 - Sep 17-21: Routine, unannounced inspection by a region-based inspector of radiation protection during refueling including licensee action on IE Circulars, supplies and equipment, training, exposure control, respiratory protection, posting and control, surveys, and radioactive material control. Upon arrival a tour of the radiation control area was conducted to observe radiation safety practices (20 Hours). Noncompliances: One (Failure to evaluate exposures to airborne activity).

+ 50-278/80-04 - Feb 23, 25-28: Special onsite regular and backshift inspection by the resident inspectors: (37.5 hours). Areas inspected included circumstances of the valving out of a seismically qualified air supply to five Unit 3 containment ventilation valves, a blocking error which resulted in valving out the air supply to the valve disc seals for two valves, valve modifications and followup on prior associated LERs. Noncompliances: Three (Failure to establish adequate approved procedures to assure seismically qualified air supply system for five containment isolation valves; Failure to take adequate and timely corrective actions to assure that containment ventilation valves would not be opened beyond the point whereby closure against post-LOCA conditions could be assured; and Failure to follow procedures -- four examples related to modification and the blocking and permit system).

+ 15000039/80-01 - Jan 31-Feb 1: Chem-Nuclear Waste disposal site, Barnwell, South Carolina for unannounced inspections of licensee-shippers. Areas inspected included each licensee-shipper vehicle for compliance with Department of Transportation (DOT) and NRC regulations as follows: (1) shipping paper requirements; (2) DOT Placarding requirements; (3) radiation levels; (4) removable contamination; (5) DOT marking and labeling requirements for packages; (6) DOT and NRC requirements for external package features; and, (7) prohibited articles or contents. Noncompliances: None.

INSPECTION STATUS

ENFORCEMENT STATUS

A SHIPMENT OF LICENSED RADIOACTIVE MATERIAL WAS MADE BY THE LICENSEE TO BARNWELL, SOUTH CAROLINA ON 12/14/79, IN AN EXCLUSIVE USE VEHICLE, IN WHICH THE DOSE RATE AS MEASURED FROM THE LICENSED MATERIAL WAS 15-17 MILLIREM PER HOUR AT 2 METERS (6 FEET) FROM THE VERTICAL PLANES PROJECTED BY THE OUTER LATERAL SURFACES OF THE VEHICLE. UPON RECEIPT OF THE MATERIAL AT BARNWELL, SOUTH CAROLINA ON 12/17/79. (7923 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- Indication of cracks on three jet pump holddown bars. Bars to be replaced during existing refueling outage.

PLANT STATUS:

- Shutdown for refueling until early May.

- LAST IE SITE INSPECTION DATE: 4/1/80
- INSPECTION REPORT NO: 50-293/80-13

SUMMARY

INSPECTION SUMMARY

- 50-293/80-02 - Jan 17-18: Special announced inspection by one region-based inspector of the licensees shipment of radioactive waste to Barnwell, South Carolina. The inspection involved 15 hours onsite. No items of noncompliance were identified.
- 50-293/80-03 - Jan 22-24: Routine, unannounced inspection of the torus modification and the inservice inspection program. The inspection involved 20 hours onsite by two region-based inspectors. No items of noncompliance were identified.
- 50-293/80-06 - Feb 2: Management meeting held at NRC request to discuss details of establishing the NRC Resident Office at Pilgrim Nuclear Power Station.
- 50-293/80-07 - Feb 20-22: Routine, unannounced inspection of the torus modification and inservice inspection. The inspection involved 36 hours onsite by two region-based inspectors. No items of noncompliance were identified.

PLANT STATUS

Unit operating routinely.

+LAST IE SITE INSPECTION DATE: January 15-16 and February 11, 1980

+ INSPECTION REPORT NO: 80-03

SUMMARY

INSPECTION SUMMARY

+ Inspection on January 2 through February 1, (80-01): Routine, unannounced resident inspection of licensee actions on previous inspection findings, maintenance, plant operations, physical protection-security organization; physical barriers; access control (identification, authorization, badging, search and escorting); and communications, review and followup on licensee event reports, review and followup on IE Bulletins, surveillance of core power distribution limits, and thermal power evaluation. The inspection involved 175 inspector hours onsite by one NRC inspector. Of the 12 areas inspected, no apparent items of noncompliance were identified.

+ Inspection on January 15-16 and February 11, (80-03): Torus support modification QA/QC program, implementing procedures, work activities, and review and evaluation of welding and nondestructive examination (NDE) data and reports; interpret radiographs of welds in feedwater system. The inspection involved 19 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

PLANT STATUS:

Plant refueling outage.

LAST IE SITE INSPECTION DATE: 04/07-11/80+

INSPECTION REPORT NO. 50-312/80-09+

SUMMARY

INSPECTION SUMMARY

+ Inspection on January 17-26, 1980 (Report No. 50-312/80-01)
Areas Inspected: Routine, unannounced inspection of progress in completion of required fire protection modifications, major surveillance performed during a refueling outage; major maintenance performed during a refueling outage; followup of unresolved items; and followup of IE Bulletins and Circulars. The inspection involved 64 inspector hours on site by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

+ Inspection on February 12-15, 28-29 & March 3-7, 1980 (Report No. 50-312/80-04)
Areas Inspected: Routine, unannounced inspection of the status of completion of selected fire protection modifications; status of completion of other required modifications; maintenance during a refueling outage; followup on IE Bulletins; and followup on previous inspection findings. The inspection involved 65 inspector hours on site by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

+ Inspection on February 1-29, 1980 (Report No. 50-312/80-06)
Areas Inspected: Routine inspections of preparation for refueling activities; refueling activities; LER followup; facility modifications; and independent inspection effort. The inspection involved 100 inspector hours by three NRC Region V based inspectors.

Results: No items of noncompliance were identified in four areas. Three items of noncompliance were identified in one area (LER followup). Assessment of a civil penalty in the amount of $25,000 is proposed.

+ Inspection on March 17-21, 1980 (Report No. 50-312/80-07)
Inspection cancelled.

+ Inspection on March 4-5, 1980 (Report No. 50-312/80-08)
Areas Inspected: Routine, unannounced inspection by Regional based inspectors of the licensee's activities performed in response to IE Bulletin 79-02, "Pipe Support Base Plate Design Using Concrete Expansion Anchor Bolts." The inspection involved 16 inspector hours onsite by one NRC inspector.

Results: No items of noncompliance of deviations were identified.

+ Inspection on April 7-11, 1980 (Report No. 50-312/80-09)
Report being prepared; to be reported next month.

+ Inspection on March 1-31, 1980 (Report No. 50-312/80-10)
Report being prepared; to be reported next month.

NRC POWER RESTRICTIONS: None

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1, WRITTEN PROCEDURES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED THAT MEET OR EXCEED THE REQUIREMENTS AND RECOMMENDATIONS OF SECTIONS 5.1 AND 5.3 OF ANSI N18.7-1972 AND APPENDIX "A" OF USNRC REGULATORY GUIDE 1.33 DATED NOVEMBER 3, 1972 ANSI N18.7-1972, SECTION 5.3.7, STATES IN PART THAT PROCEDURES SHALL BE PROVIDED FOR THE CONTROL, TREATMENT, AND MANAGEMENT OF RADIOACTIVE WASTES. R.G. 1.33 (1972).APPENDIX A, SECTION G, INCLUDES SPENT RESIN AND FILTER SLUDGE HANDLING, BALING MACHINE OPERATION, AND DRUM HANDLING AND STORAGE AS TYPICAL SAFETY-RELATED ACTIVITIES WHICH SHOULD BE COVERED BY WRITTEN PROCEDURES. THERE WERE NO LICENSEE-APPROVED WRITTEN PROCEDURES FOR THE METHODS AND TECHNIQUES ROUTINELY USED TO TRANSFER AND DEWATER SPENT RESIN OR TO SOLIDIFY EVAPORATOR BOTTOMS.
(7922 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1, WRITTEN PROCEDURES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED THAT MEET OR EXCEED THE REQUIREMENTS AND RECOMMENDATIONS OF SECTION 5.1 AND 5.3 OF ANSI N18.7-1972 AND APPENDIX A OF USNRC REGULATORY GUIDE 1.33 DATED NOVEMBER 3, 1972. REGULATORY GUIDE 1.33 STATES IN PART THAT CHEMICAL AND RADIOCHEMICAL CONTROL PROCEDURES SHOULD BE WRITTEN TO PRESCRIBE THE NATURE AND FREQUENCY OF SAMPLING AND ANALYSES AND THAT THESE PROCEDURES SHOULD SPECIFY LABORATORY INSTRUCTIONS AND CALIBRATION OF LABORATORY EQUIPMENT. ON FEBRUARY 5, 1980 THERE WERE NO APPROVED WRITTEN PROCEDURES FOR OPERATION OF THE GE(LI) GAMMA RAY SPECTROSCOPY SYSTEM AND APPROVED WRITTEN PROCEDURES WERE NOT USED FOR RADIOCHEMICAL ANALYSIS OF SAMPLES FOR MONITORING EFFLUENT RELEASES.
(8001 INFRACTION)

FAILURE TO MAINTAIN PROTECTED AREA AS REQUIRED BY SECURITY PLAN.
(8002 INFRACTION)

FAILURE TO SEARCH VISITORS AS REQUIRED BY SECURITY PLAN.
(8002 INFRACTION)

CONTRARY TO THE REQUIREMENTS OF 10CFR20.203(F), CONTAINERS CALCULATED TO CONTAIN LICENSED MATERIAL IN THE CONTAMINATED WAREHOUSE AND IN 55-GALLON DRUMS OUTSIDE THE BIT ROOM WERE NOT LABELED PROPERLY.
(8003 DEFICIENCY)

CONTRARY TO THE REQUIREMENTS OF T.S. 6.11, HP-20 WAS NOT ADHERED TO IN FULL IN THAT ITEM 3 IN ANSWER TO QUESTION 0 REQUIRING COMPLIANCE WITH CNSI RADIOACTIVE MATERIAL LICENSES WAS NOT MET. CONDITION 29 OF CNSI LICENSE 097 (AMENDMENT 26) STATES THAT WASTE CONTAINING BOTH TOXI CHEMICALS AND RADIOACTIVE MATERIALS SHALL REQUIRE AN INDEPENDENT EVALUATION OF BOTH HAZARDS. ON FEBRUARY 5, 1980, AN LSA CONTAINER PREPARED FOR SHIPMENT TO BARNWELL CONTAINED SULFURIC ACID WITHOUT ANY PREVIOUS EVALUATION OF THE CHEMICAL VERSUS RADIOACTIVE HAZARDS.
(8003 INFRACTION)

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TS 6.8.1, AN INDIVIDUAL NOT AUTHORIZED OR FAMILIAR WITH TS REQUIREMENTS APPROVED A TAGGING REQUEST WITHOUT THE KNOWLEDGE OF THE RESPONSIBLE SHIFT SUPERVISOR THAT RESULTED IN ALL THREE EMERGENCY DIESELS BEING TAGGED & LOCKED OUT INSTANTANEOUSLY.
(7932 INFRACTION)

CONTRARY TO FSAR DESCRIPTION, AUXILIARY FEEDWATER STORAGE TANK AS-BUILT WAS NOT SEISMIC I.
(7933 DEVIATION)

CONTRARY TO TS 6.8.1 & PERFORMANCE DEPARTMENT MANUAL, PARAGRAPHS 3.4.5.5 & 3.4.5.7, QUALITY CONTROL & SUPERVISORY REVIEW DID NOT OBSERVE OR CORRECT IMPROPER RECORDED DATA IN 2 T.S. CALIBRATION PROCEDURES.
(8001 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

Leakage from the spent fuel pool liner of between 500-1000 cc/hr. Repairs are in progress on the suspected leak area.

PLANT STATUS:

Operating at full power.

LAST IE SITE INSPECTION DATE: 3/12/80

INSPECTION REPORT NO: 50-272/80-08

SUMMARY

INSPECTION SUMMARY

50-272/79-32 - Nov 18 - Dec 15, 1979 & Jan 9, 1980: Routine inspections by the resident inspector of plant operations including: tours of the facility; log and record reviews; review of licensee events; IE Bulletins and Circulars; implementation of licensing commitments; and, followup on previous inspection items. The inspections involved 49 hours by the NRC resident inspector and 6 hours by one region-based inspector. Noncompliances: One (failure to follow procedures).

50-272/79-33 - Dec 16, 1979 - Feb 2, 1980: Routine inspections by the NRC resident inspector (40 hours) of plant operations including: tours of the facility; log and record reviews, review of licensee events; IE Bulletins; Immediate Action Letter followup; observations in the control room; and followup on previous inspection items. Noncompliances: None. Deviation: One (change made to the facility as described in the FSAR).

50-272/80-01 - Jan 22-25: Routine, unannounced inspection by a region-based inspector (29 hours) of licensee action on previous inspections findings; administrative control of safety related calibrations; surveillance calibrations of safety related components and equipment required by Technical Specifications; calibrations required by Technical Specifications of components and equipment association with safety related systems and/or functions; calibration and control of test equipment; witnessing of calibrations; technician qualifications; and facility tour. Noncompliances: One (failure to properly review calibration data).

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO THE REQUIREMENTS OF 10 CFR 50, APPENDIX B, CRITERION V, THE LICENSEE'S QUALITY ASSURANCE PROGRAM AND IMPLEMENTING PROCEDURE WPP 19.20, WELD FILLER MATERIAL WAS FOUND TO BE IMPROPERLY CONTROLLED. UNAUTHORIZED FILLER MATERIAL, UNPROTECTED LOW HYDROGEN MATERIAL, AND IMPROPERLY DISCARDED FILLER MATERIAL WERE FOUND IN THE IMMEDIATE AREA OF WORK ON SAFETY-RELATED PIPING.
(8003 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST (CITE RO REPORT NUMBER, IF APP.)

SYSTEMS AND COMPONENT PROBLEMS:

+ Pressure relief tank overfilled. Shutdown to replace rupture diaphragm.

FACILITY ITEMS (PLANS AND PROCEDURES):

+ Refueling planned for April.

MANAGERIAL ITEMS

None.

PLANT STATUS:

+ Plant operating routinely until refueling in early April.

LAST IE SITE INSPECTION DATE: 03/31-04/04/80+

INSPECTION REPORT NO: 50-206/80-10+

SUMMARY

INSPECTION SUMMARY

+ Inspection on January 29, February 1 & 6-7, 1980
(Report No. 50-206/80-03)
Areas Inspected: Routine, unannounced inspection of plant modifications required as a result of the Three Mile Island Lesson Learned Task Force recommendations (NUREG-0578). The inspection included selective examinations of procedures and representative records, interviews with personnel, observation of work activities, and review of licensee action on unresolved and open items from previous inspections. The inspection involved 37 inspector hours on site by two NRC inspectors.

Results: One item of noncompliance was identified in the area of control of weld filler material.

+ Inspection on January 28 - February 29, 1980
(Report No. 50-206/80-04)
Areas Inspected: Routine, resident inspection of plant operations, surveillance, maintenance, receipt of new fuel, charging pump mini-flow line repair, design changes and modifications, licensee event reports, and onsite review committee activities. The inspection involved 121 inspector hours on site by two NRC inspectors.

Results: Of the eight areas inspected, no items of noncompliance were identified in five areas; one apparent item of noncompliance was identified in the design changes and modifications area (Deficiency - Failure to report reactor protection system setpoints less conservative than those established by the Technical Specifications); two apparent items of noncompliance were identified in the charging pump mini-flow line repair area (Infractions - Use of a nonstandard fitting and failure to dispose of unused welding filler material by bending).

+ Inspection on March 10-13, 1980 (Report No. 50-206/80-05)
Report being prepared; to be reported next month.

+ Inspection on March 3-7, 1980 (Report No. 50-206/80-06)
Areas Inspected: Routine, unannounced inspection of the quality control and confirmatory measurements aspects of the radioactive waste/effluent monitoring program; followup of licensee response to IE Circulars 79-15, 79-21 and Bulletin 80-03; investigation of conditions and licensee action related to LER 80-05 (temperature differential across the circulating cooling water condenser in excess of ETS limits); and independent inspection effort in the areas of spent fuel shipment operations and qualified escort refresher training. The inspection involved a total of 24.5 hours on site by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

+ Inspection on March 18-21, 1980 (Report No. 50-206/80-07)
Areas Inspected: Security Program Audit. The inspection involved 16 inspector hours on site by one NRC inspector.

Results: The licensee was found to be in compliance with NRC requirements and the approved physical security plan.

+ Inspection on January 21-March 28, 1980 (Report No. 50-206/80-08)
Areas Inspected: Physical protection of irradiated fuel shipments. The inspection involved 26 inspector hours on site by four different NRC inspectors.

Results: The licensee was found to be in compliance with NRC requirements.

+ Inspection on March 3-31, 1980 (Report No. 50-206/09)
Report being prepared; to be reported next month.

+ Inspection on March 31-April 4, 1980 (Report No. 50-206/80-10)
Report being prepared; to be reported next month.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY CRITERION III OF APPENDIX B TO 10 CFR 50 AND SECTION 3 OF THE VEPCO QA MANUAL FOR DESIGN CONTROL, MEASURES AND PROCEDURES WERE ESTABLISHED FOR CONTROLLING THE SUITABILITY OF APPLICATION OF MATERIALS, PARTS, EQUIPMENT, AND PROCESSES THAT ARE ESSENTIAL TO THE SAFETY-RELATED FUNCTIONS OF SYSTEMS AND COMPONENTS, AND FOR ASSURING THAT DESIGN CHANGES, INCLUDING FIELD CHANGES, ARE SUBJECT TO REVIEW AND CONTROL MEASURES COMMENSURATE WITH THOSE APPLIED TO THE ORIGINAL DESIGNS. CONTRARY TO THE ABOVE, WHEN THE UNIT 1 PRESSURIZER POWER-OPERATED RELIEF VALVES (PORV'S) POV-1455C AND -1456 WERE REBUILT ON DECEMBER 28, 1979, THROUGH JANUARY 4, 1980, FLEXITALLIC GASKETS WITH DESIGN RATINGS BELOW THE SPECIFIED REPLACEMENT GASKET RATINGS WERE APPARENTLY INSTALLED IN THE SAFETY-RELATED PORV'S WHEN THE SPECIFIED STOCK WAS DEPLETED. THE SUITABILITY OF THE GASKETS IN THIS APPLICATION WAS NOT REVIEWED AS REQUIRED BY THE APPROPRIATE PLANT MANAGEMENT OR ENGINEERING PERSONNEL.
(8001 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4.A.7, DETAILED WRITTEN PROCEDURES WITH APPROPRIATE CHECK-OFF LISTS AND INSTRUCTIONS SHALL BE PROVIDED FOR PREVENTIVE OR CORRECTIVE MAINTENANCE OPERATIONS WHICH WOULD HAVE AN EFFECT ON THE SAFETY OF THE REACTOR. CONTRARY TO THE ABOVE, THE PLANT MAINTENANCE OPERATING PROCEDURES (MOP 5.6 SERIES) FOR FILLING THE REACTOR COOLANT LOOPS WITH WATER DID NOT CONTAIN AN APPROPRIATE CHECK-OFF STEP OR INSTRUCTION TO CLOSE DRAIN VALVE 1-RC-107 FOLLOWING REPLACEMENT OF RC PUMP "A" MOTOR, AND CONSEQUENTLY WAS FOUND OPEN.
(8001 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

RE-ANALYSIS AND REVIEW OF SEISMIC DESIGN DEFICIENCIES ARE CONTINUING.

FACILITY ITEMS (PLANS AND PROCEDURES):

NONE.

MANAGERIAL ITEMS:

NONE.

PLANT STATUS:

UNIT IS CURRENTLY SHUTDOWN FOR MAIN TURBINE INSPECTION AND CORRECTION OF SEISMIC DESIGN ERRORS.

◆ LAST IE SITE INSPECTION DATE: MARCH 13, 1980

◆ INSPECTION REPORT NO: 50-280/80-07

SUMMARY

INSPECTION SUMMARY

◆ INSPECTION DECEMBER 17 - FEBRUARY 4 (80-01): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 180 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS AND OPERATING RECORDS, PLANT MODIFICATION AND MAINTENANCE, FOLLOWUP OF LER'S AND PLANT SECURITY. OF THE FOUR AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE FOUND IN THREE AREAS; TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN THE PLANT MAINTENANCE AREA (INFRACTION - INADEQUATE MAINTENANCE PROCEDURES FOR VALVE 1-RC-107 CONTROL, AND INFRACTION - INADEQUATE REVIEW OF SUBSTITUTE GASKETS USED DURING MAINTENANCE OF UNIT 1 PRESSURIZER POWER OPERATED RELIEF VALVES).

INSPECTION FEBRUARY 13-15 (80-03): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED NINETEEN INSPECTOR-HOURS ON SITE IN THE AREA OF SURVEILLANCE TESTING PROGRAM REVIEW. OF THE ONE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-043/ 03L-0	12/20/79	01/17/80	30 DAY LER	RADIATION RECORDER RR-175 STOPPED PRINTING FOR ABOUT 13 MINUTES DUE TO A CONTROL STRING ON DRIVE WHEEL.
79-044/ 03L-0	12/30/79	01/17/80	30 DAY LER	AN OPERABILITY CHECK OF #3 EMERGENCY DIESEL GENERATOR DETECTED A NOISE IN THE TURBO-CHARGER AREA.
80-04/ 01T-0	01/08/80	01/21/80	14 DAY LER	AUXILIARY FEEDWATER PUMP DISCHARGE CHECK VALVE 1-FW-89 STUCK OPEN.

PLANT STATUS

* The plant operated at power throughout the month of March.

LAST IE SITE INSPECTION DATE: 03/03-31/80*

INSPECTION REPORT NO: 50-344/80-06*

SUMMARY

INSPECTION SUMMARY:

* Inspection on February 15, 1980 (Report No. 50-344/80-03) Areas Inspected: Headquarters and region review of the licensee's approved security plan. The inspection involved six hours by two NRC inspectors.

Results: The licensee was found to be in compliance with NRC requirements.

* Inspection on February 1-29, 1980 (Report No. 50-344/80-04) Areas Inspected: Routine inspections of plant operations, maintenance, physical security, training, refueling preparations, and procedures. The inspection involved 137 inspector hours by the NRC Resident Inspectors.

Results: No items of noncompliance or deviations were identified.

* Inspection on March 17-21, 1980 (Report No. 50-344/80-05) Report being prepared; to be reported next month.

* Inspection on March 3-31, 1980 (Report No. 50-344/80-06) Report being prepared; to be reported next month.

INSPECTION STATUS

ENFORCEMENT STATUS

NRC LETTER OF FEBRUARY 5, 1978, "FIRE PROTECTION GUIDELINES", ATTACHMENT 6; FLORIDA POWER AND LIGHT COMPANY 'S (FP&L) RESPONSE LETTER L-78-197. FIRE PROTECTION GUIDELINES, ENCLOSURE 1, ATTACHMENT 6 AND NRC CONFIRMING LETTER OF JUNE 30, 1978, "FIRE PROTECTION GUIDELINES" COMPRISE A COMMITMENT MADE AND ACCEPTED THAT FP&L ESTABLISH A FIRE PROTECTION QUALITY ASSURANCE (FPQA) PROGRAM BASED ON DRAFT REGULATORY GUIDE 1.120, JUNE, 1976 WITH A "LEVELS OF QUALITY" APPROACH. DURING THE WEEK OF JANUARY 7-11, 1980, THE LICENSEE COULD FURNISH NO EVIDENCE OF COMPLETED FPQA PROGRAM DEVELOPMENT OR IMPLEMENTATION.
(8003 DEVIATION)

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION XVII, AND TOPICAL QUALITY REQUIREMENT 17.0 OF THE TOPICAL QUALITY ASSURANCE REPORT NO. FPLTQAR 1-76, AS IMPLEMENTED IN PART BY PARAGRAPH 8.4.5 OF ADMINISTRATIVE PROCEDURE A.P. 190.14, INCORRECT ENTRIES ON QA RECORDS SHALL BE CORRECTED BY DRAWING A SINGLE LINE THROUGH THE INCORRECT ENTRY AND THEN ADDING THE CORRECT ITEM. THE PERSON MAKING THE CORRECTION SHALL INITIAL AND DATE THE CORRECTION. CONTRARY TO THE ABOVE, CORRECTIONS ON UNIT 3 CLEARANCE ORDERS 12-57 AND 1-261 ISSUED 12-1-79 AND 1-29-80 RESPECTIVELY WERE MADE WITHOUT THE REQUIRED INITIALS AND/OR DATES BEING INDICATED.
(8004 DEFICIENCY)

AS REQUIRED BY SECTION 6.8.1 OF THE TECHNICAL SPECIFICATIONS, WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES THAT MEET OR EXCEED THE REQUIREMENTS AND RECOMMENDATIONS OF SECTION 5.1 AND 5.3 OF ANSI N18.7-1972 AND APPENDIX A OF USNRC REGULATORY GUIDE 1.33 SHALL BE IMPLEMENTED. CONTRARY TO THE ABOVE, THE FOLLOWING REPRESENTS FAILURE TO IMPLEMENT EXISTING PROCEDURES: EQUIPMENT CLEARANCE ORDER FORMS 1-259, 1-225, 1-192, 1-267 AND 1-268 ISSUED DURING JANUARY 1980 WERE NOT FILLED OUT IN THE MANNER REQUIRED BY A.P. 0103.4, "IN-PLANT EQUIPMENT CLEARANCE ORDERS."

◆ INSPECTION REPORT NO: 50-250/80-08

SUMMARY

INSPECTION SUMMARY

◆ INSPECTION JANUARY 7-31 (80-04): THIS ROUTINE INSPECTION INVOLVED 60 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS; MAINTENANCE ACTIVITIES; REACTOR COOLANT PUMP SEAL REPLACEMENT; EQUIPMENT CLEARANCE ORDERS; QUALITY ASSURANCE RECORDS; LICENSEE ACTION ON IE BULLETINS. OF THE SIX AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FOUR AREAS; TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (INFRACTION - FAILURE TO FOLLOW PROCEDURES; DEFICIENCY - FAILURE TO FOLLOW TOPICAL QUALITY REQUIREMENT 17.0 AS IMPLEMENTED BY AP 190.14).

INSPECTION FEBRUARY 4-7 (80-06): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 34 INSPECTOR-HOURS ON SITE IN THE AREAS OF SMALL BREAK LOSS OF COOLANT PROCEDURES AND TRAINING. WITHIN THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 19-22 (80-07): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 12 INSPECTOR-HOURS ON SITE IN THE AREAS OF STEAM GENERATOR REPAIR FOR TURKEY POINT STATION. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS (PLANS AND PROCEDURES):

- Unit was shutdown April 1st and 2nd for a preplanned outage to facilitate a rod program change, startup transformer tap change as identified in LER 80-11/1T, and for routine maintenance.
- Next scheduled outage is for refueling operations in September.

PLANT STATUS:

- Routine operations at full power. SJAE offgas release rate is 3330 microcuries per second. Stack release rate is below 100 microcuries per second.

- LAST IE SITE INSPECTION DATE: 3/14/80
- INSPECTION REPORT NO: 50-271/80-04

SUMMARY

INSPECTION SUMMARY

- 50-271/79-14 - Oct 1-4: Routine, unannounced inspection by a region-based inspecter of radiation protection during refueling, including licensee action on IE Circulars, procedures, advance planning and preparation, training, exposure control, respiratory protection, posting and control, surveys, and radioactive material contro. Upon arrival, a tour was conducted of the radiation control area to observe radiation safety practices on jobs in progress. The inspection involved 33 inspector-hours onsite by one NRC region-based inspector. Of the nine areas inspected, one item of noncompliance was found in each of two areas: (Failure to adhere to RWP procedure; and, Failure to perform surveys).
- 50-271/79-20 - Nov 19-21: Routine, unannounced inspection by a region-based inspecter of pipe support and restraint system surveillance and the Inservice Inspection Program for class 1 and 2 restraints. The inspection involved 21 inspecter-hours onsite by one NRC region-based inspecter. No items of noncompliance were identified.
- 50-271/80-01 - Jan 18: Management meeting held at NRC request to discuss details related to the establishment of an onsite office for the purpose of placing two full time NRC inspectors at the facility. All parties concurred on administrative and operational considerations needed to establish an onsite NRC resident office.

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
80-007/03L	01/28/80	02/27/80	30 Day LER	HPCI system declared inoperable during surveillance testing when steam turbine governor valve failed to automatically open following turbine shutdown
80-008/03L	02/03/80	03/03/80	30 Day LER	Snubber RR-2 found inoperable during routine inspections
80-009/03L	02/23/80	03/17/80	30 Day LER	RHR service water pump failed to start during surveillance due to faulty circuit breaker
80-011/01T	03/12/80	03/26/80	24 Hours	Possible degradation of voltage to safeguards equipment

- 50-271/80-02 - Feb 5-8: Routine, unannounced inspection by a region-based inspector of Licensee Actions for IEB 80-01; plant modifications resulting from NUREG 0578; Plant Operations; Emergency Procedure conformance to NEDO-24708 - Small Break LOCA; Operator Guidelines; and submitted LER information. The inspection involved 16 inspector-hours onsite. No items of noncompliance were identified.
- 50-271/80-03 - Feb 21: Special, unannounced inspection by a region-based inspector of the circumstances surrounding a shipment of low specific activity (LSA) radioactive waste on a tractor-trailer which had radiation levels above the DOT limits given in 49 CFR 173.393(j), when the tractor-trailer arrived at the Nuclear Engineering Company (NECO), Richland, Washington, burial site. Another region-based inspector discussed the reporting of significant events with the licensee. The inspection involved 8 inspector-hours onsite by two NRC region-based inspectors. One apparent item of noncompliance was identified in the transportation of waste (Violation - Failure to maintain radiation levels at the underneath surface of an exclusive use trailer within the limits given in 49 CFR 173.393(j)(2)).

ENFORCEMENT STATUS

FAILURE TO FOLLOW PACKAGE SEARCH REQUIREMENTS.
(8001 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- The LP Turbine has failed (thrown blades and damaged inner casing).

FACILITY ITEMS (PLANS AND PROCEDURES):

- Discussions with Plant Superintendent indicate that the Turbine is repairable and the plant should be able to recommence power operations in about six months.

MANAGERIAL ITEMS:

- NRR Lessons Learned Task Force met with Yankee Atomic Electric Co. representatives on April 2, 1980 to discuss Yankee Rowe's implementation of Category "A" items.

PLANT STATUS:

- Plant shutdown/cooled down while repairing LP turbine.

- LAST IE SITE INSPECTION DATE: 3/17/80

- INSPECTION REPORT NO: 50-29/80-07

SUMMARY

INSPECTION SUMMARY

- 50-29/79-15 - Dec 13-14: Special unannounced inspection by a NRC region-based inspector of licensee's response to IE Bulletin 79-19 including a review of copies of DOT and NRC regulations maintained onsite, procedures, training of personnel, records, audits, and Quality Assurance relating to the transfer, packaging and shipping of low level radioactive waste material. The inspection involved 16 hours onsite by one NRC region0based inspector. No items of noncompliance were identified.

- 50-29/80-01 - Jan 15-17: Routine, unannounced inspection of the environmental monitoring programs for operation. Areas inspected included: The management controls for these programs, quality controls of analytical measurements, implementation of radiological environmental monitoring programs, security-package search, and a followup on licensee action on previous environmental inspection findings. This inspection involved 48 inspector-hours onsite by 2 region-based NRC inspectors. Of the 5 areas inspected, no items of noncompliance were found in 4 areas. One apparent item of noncompliance was identified in 1 area (Infraction - Failure to observe search requirements).

50-29/80-05 - Feb 19-20: Special unannounced inspection by a region-based inspector of circumstances surrounding a transport trailer carrying Yankee Atomic Electric Company LSA radioactive waste having surface radiation levels greater than 200 mR/hr, when the trailer was received at the Chem-Nuclear Systems, Inc. burial facility near Barnwell, South Carolina. The inspection involved 9 inspector-hours onsite by one region-based inspector. No items of noncompliance or deviations were identified.

50-29/80-06 - Mar 4-6: Facility Organization and Operation, Measurement and Controls, Shipping and Receiving, Storage and Internal Controls, Inventory, Records and Reports and Management and Material Control. The inspection involved 32 inspector-hours onsite by two NRC inspectors and was begun during the regular hours. The licensee was found to be in compliance with NRC requirements in all areas examined during the inspection.

+ INSPECTION REPORT NO: 80-01

SUMMARY

INSPECTION SUMMARY

+ Inspection on January 3 through February 6, (80-01): Routine, resident inspection of maintenance, plant operations, security, review of licensee events, IE bulletin and circular review, surveillance, new fuel inspection, reactor power distribution limits, thermal power evaluation, axial flux determination. The inspection involved 159 inspector hours onsite by one NRC inspector. Of the areas inspected, one item of noncompliance was identified, (failure to follow procedures during shift turnover).

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
80-02/03L-0	01/26/80	02/26/80	30 Day LER	With unit at 98% power, it was noted that pressure was increasing on reference channel.
80-04/03L-0	01/28/80	02/28/80	30 Day LER	During normal operation, found S/G Level xmtr 2LT-538 had shifted high by 3.9%.
80-06/03L-0	02/02/80	03/03/80	30 Day LER	Containment vent particulate rad monitor would not respond to its check source nor to manual bugging.
80-08/03L-0	02/06/80	03/07/80	30 Day LER	At 95% power, instrument loop for steam generator pressure was found to be 2.5% out of tolerance.
80-10/03L-0	02/02/80	03/11/80	30 Day LER	No grab sample was drawn from second shift of rad monitor 2 RE-0011 during OOS surveillance.
80-11/03L-0	02/24/80	03/13/80	30 Day LER	While operating at 98% power, monthly surveillance of MSIV was performed 2 days late.

REVIEWED BY OMPA LOEB: Bobe **DATE:** 5/12/80

REVIEWED BY NRR DOR: Ed A. Reeves **DATE:** 5-13-80

III. Independent Spent Fuel Storage Installations (h)							
Morris Operations		750 MTU (j)	315	385 MTU (j)	1490 MTU (j)		
NFS(i)		250 MTU	170 MTU	80 MTU			

(a) At each refueling outage approximately 1/3 of a PWR core and 1/4 of a BWR core is off-loaded.
(b) Some of these dates have been adjusted by staff assumptions.
(c) This is the total for both units.
(d) Plant not in commercial operation.
(e) Some spent fuel stored at Brunswick.
(f) Authorized a total 2088 BWR and 304 PWR assemblies for both pools.
(g) Robinson 2 assemblies being shipped to Brunswick for storage.
(h) Capacity is in metric tons of uranium; 1 MTU = 2 PWR assemblies or 5 BWR assemblies.
(i) No longer accepting spent fuel.
(j) Racked for 700 MTU.
(k) Reserved
(l) This is the station total.

N/S = Not Scheduled

REACTOR-YEARS OF EXPERIENCE

AS OF 03/31/80

The total of Reactor years of experience is as the sum of all calendar days for each unit, from the date that electricity was first generated until a final shutdown date or the status date, whichever comes first, divided by 365.25 days/year.

If a date is unknown, the first day of the first month of operation is substituted. Units which have not yet generated electricity but which are licensed are listed but not included in the computation.

(INFORMATION INCLUDES BOTH LICENSED AND NON–LICENSED ELECTRICAL UNITS).

OPERATING UNITS STATUS REPORT

DATA AS OF 4-30-80

LICENSED OPERATING REACTORS

AUTHORIZATION AND CLEARANCE

THE U.S. NUCLEAR REGULATORY COMMISSION'S OFFICE OF MANAGEMENT AND PROGRAM ANALYSIS PUBLISHES THIS MONTHLY STATUS REPORT "AS PART OF THE REPORTING REQUIREMENTS IN SECTION 50.36 OF 10 CFR PART 50 UNDER GAO CLEARANCE NUMBER B-180225, WITH AN EXPIRATION DATE OF SEPTEMBER 30, 1981," AS STATED IN THE OCTOBER 3, 1978 LETTER FROM JOHN M. LOVELADY, ASSISTANT DIRECTOR, GENERAL GOVERNMENT DIVISION, U. S. GENERAL ACCOUNTING OFFICE, TO J.M. FELTON, DIRECTOR, DIVISION OF RULES AND RECORDS, U.S. NUCLEAR REGULATORY COMMISSION.

STATEMENT OF PURPOSE

The U. S. Nuclear Regulatory Commission's monthly OPERATING UNITS STATUS REPORT – LICENSED OPERATING REACTORS, provides data on the operation of nuclear units as timely and accurately as possible. This information is collected by the Office of Management and Program Analysis from the Headquarters Staff of NRC's Office of Inspection and Enforcement, from NRC's Regional Offices, and from utilities. Since all of the data concerning operation of the units is provided by the utility operators less than two weeks after the end of the month, necessary corrections to published information are shown on the ERRATA page.

This report is divided into three sections: the first contains monthly highlights and statistics for commercial operating units, and errata from previously reported data; the second is a compilation of detailed information on each unit, provided by NRC Regional Offices, IE Headquarters and the Utilities; and the third section is an appendix for miscellaneous information such as spent fuel storage capability, reactor-years of experience and non-power reactors in the United States.

The percentage computations, Items 19 through 24 in Section 2, the vendor capacity factors on page 1-4, and actual vs. potential energy production on Page 1-2 are computed from actual power production from the period of consideration. The percentages listed in power generation on Page 1-2 are computed as an arithmetical average. The factors for the life-span of each unit (the "Cumulative" column) are reported by the utility and are not entirely re-computed by NRC. Utility power production data is checked for consistency with previously submitted statistics.

In some cases, the numbers in the "Cumulative" column may have been totaled from a date that is different from the date of commercial operation. In these cases, the column is noted with an explanation of the nature of the change on each individual plant page in Section 2.

It is hoped this status report proves informative and helpful to all agencies and individuals interested in analyzing trends in the nuclear industry which might have safety implications, or in maintaining an awareness of the U. S. energy situation as a whole.

PHILIP A. ROSS
REVIEW COORDINATOR

TABLE OF CONTENTS

GLOSSARY ii
INDEX TO LICENSED UNITS iii

SECTION 1 – CURRENT DATA SUMMARIES

MONTHLY HIGHLIGHTS OF COMMERCIAL NUCLEAR POWER UNITS 1-2

- Licensed Power Reactors 1-2
- Power Generation 1-2
- Actual vs. Potential Energy Production 1-2
- Outage Data 1-2
- Derated Units 1-2
- Shutdowns - Number and Reasons 1-3
- Unit Availability, Capacity, and Forced Outage Rate 1-3
- Refueling Schedule 1-3

AVERAGE CAPACITY FACTORS BY VENDOR 1-4

AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIAL OPERATING UNITS 1-5

ERRATA 1-7

SECTION 2 – OPERATING POWER REACTORS

ARKANSAS 1 THROUGH ZION 2 PAGES A–2 TO Z–5

- Facility Data
- Inspection and Enforcement Status
- Reports Received from Licensee
- Operating Status
- Average Daily Power Level (MWe)
- Unit Shutdowns/Reductions

SECTION 3 – APPENDIX

STATUS OF SPENT FUEL STORAGE CAPABILITY 3-2
REACTOR-YEARS OF EXPERIENCE 3-3
NON-POWER REACTORS IN THE U.S. 3-4

GLOSSARY

AVERAGE DAILY POWER LEVEL (MWe)	The net electrical energy generated during the day (measured from 0001 to 2400 hours inclusive) in megawatts hours divided by 24 hours.
LICENSED THERMAL POWER (MWt)	The maximum thermal power of the reactor authorized by the NRC, expressed in megawatts.
DATE OF COMMERCIAL OPERATION	Date unit was declared by utility owner to be available for the regular production of electricity; usually related to satisfactory completion of qualification tests as specified in the purchase contract and to accounting policies and practices of utility.
DESIGN ELECTRICAL RATING (DER) (Net MWe)	The nominal net electrical output of the unit specified by the utility and used for the purpose of plant design.
FORCED OUTAGE	An outage required to be initiated no later than the weekend following discovery of an off-normal condition.
FORCED OUTAGE HOURS	The clock hours during the report period that a unit is unavailable due to forced outages.
GROSS ELECTRICAL ENERGY GENERATED (MWH)	Electrical output of the unit during the report period as measured at the output terminals of the turbine generator, in megawatts hours.
GROSS HOURS	The clock hours from the beginning of a specified situation until its end. For outage durations, the clock hours during which the unit is not in power production.
GROSS THERMAL ENERGY GENERATED (MWH)	The thermal energy produced by the unit during the report period as measured or computed by the licensee in megawatt hours.
HOURS GENERATOR ON-LINE	Also, "Unit Service Hours." The total clock hours in the report period during which the unit operated with breakers closed to the station bus. These hours added to the total outage hours experienced by the unit during the report period, shall equal the hours in the report period.
HOURS IN REPORTING PERIOD	For units in power ascension at the end of the period, the gross hours from the beginning of the period or the first electrical production, whichever comes last, to the end of the period. For units in commercial operation at the end of the period, the gross hours from the beginning of the period or of commercial operation, whichever comes last, to the end of the period or decommissioning, whichever comes first.
HOURS REACTOR CRITICAL	The total clock hours in the report period during which the reactor sustained a controlled chain reaction.
MAXIMUM DEPENDABLE CAPACITY (GROSS) (MDC Gross) (Gross MWe)	Dependable main-unit gross capacity, winter or summer, whichever is smaller. The dependable capacity varies because the unit efficiency varies during the year due to cooling water temperature variations. It is the gross electrical output as measured at the output terminals of the turbine generator during the most restrictive seasonal conditions (usually summer).
MAXIMUM DEPENDABLE CAPACITY (NET) (MDC Net) (Net MWe)	Maximum Dependable Capacity (Gross) less the normal station service loads.
NAMEPLATE RATING (Gross MWe)	The nameplate power designation of the generator in megavolt amperes (MVA) times the nameplate power factor of the generator. NOTE: The nameplate rating of the generator may not be indicative of the maximum or dependable capacity, since some other item of equipment of a lesser rating (e.g., turbine) may limit unit output.
NET ELECTRICAL ENERGY GENERATED	Gross electrical output of the unit measured at the output terminals of the turbine generator during the reporting period, minus the normal station service electrical energy utilization. If this quantity is less than zero, a negative number should be recorded.
OUTAGE	A situation in which no electrical production takes place.
OUTAGE DATE	As reported on Appendix D of Reg. Guide 1.16, the date of the start of the outage. If continued from a previous month, report the same outage date but change "Method of Shutting Down Reactor" to "4 (Other)" and add a note: "Continued from previous month."
OUTAGE DURATION	The total clock hours of the outage measured from the beginning of the report period or the outage, whichever comes last, to the end of the report period or the outage, whichever comes first.
OUTAGE NUMBER	A number unique to the outage assigned by the licensee. The same number is reported each month in which the outage is in progress. One format is "76-05" for the fifth outage to occur in 1976.
PERIOD HOURS	See "Hours in Reporting Period."
POWER REDUCTION	A reduction in the Average Daily Power Level of more than 20% from the previous day. All power reductions are defined as outage of zero hours durations for the purpose of computing unit service and availability factors, and forced outage rate.

REACTOR AVAILABLE HOURS	The total clock hours in the report period during which the reactor was critical or was capable of being made critical. (Reactor Reserve Shutdown Hours + Hours Reactor Critical.)
REACTOR AVAILABILITY FACTOR	$\frac{\text{Reactor Available Hours x 100}}{\text{Period Hours}}$
REACTOR RESERVE SHUTDOWN	The cessation of criticality in the reactor for administrative or other similar reasons when operation could have been continued.
REACTOR RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the reactor is in reserve shutdown mode. NOTE: No credit is given for NRC imposed shutdowns.
REACTOR SERVICE FACTOR	$\frac{\text{Hours Reactor Critical x 100}}{\text{Period Hours}}$
REPORT PERIOD	Usually, the preceding calendar month. Can also be the preceding calendar year, (Year-to-Date), or the life-span of a unit (cumulative).
RESTRICTED POWER LEVEL	Maximum net electrical generation to which the unit is restricted during the report period due to the state of equipment, external conditions, administrative reasons, or a direction by NRC.
SCHEDULED OUTAGE	Planned removal of a unit from service for refueling, inspection, training, or maintenance. Those outages which do not fit the definition of "Forced Outage" perforce are "Scheduled Outages."
STARTUP AND POWER ASCENSION TEST PHASE	Period following initial criticality during which the unit is tested at successively higher levels, culminating with operation at full power for a sustained period and completion of warranty runs. Following this phase, the utility generally considers the unit to be available for commercial operation.
UNIT	The set of equipment uniquely associated with the reactor, including turbine generators, and ancillary equipment, considered as a single electrical energy production facility.
UNIT AVAILABLE HOURS	The total clock hours in the report period during which the unit operated on-line or was capable of such operation. (Unit Reserve Shutdown Hours + Hours Generator On-Line.)
UNIT AVAILABILITY FACTOR•	$\frac{\text{Unit Available Hours x 100}}{\text{Period Hours}}$
UNIT CAPACITY FACTORS	
– Using Licensed Thermal Power	$\frac{\text{Gross Thermal Energy Generated x 100}}{\text{Period Hours x Lic. Thermal Power}}$
– Using Nameplate Rating	$\frac{\text{Gross Electrical Energy Generated x 100}}{\text{Period Hours x Nameplate Rating}}$
– Using DER	$\frac{\text{Net Electrical Energy Generated x 100}}{\text{Period Hours x DER}}$
– Using MDC Gross	$\frac{\text{Gross Electrical Energy Generated x 100}}{\text{Period Hours x MDC Gross}}$
– Using MDC Net	$\frac{\text{Net Electrical Energy Generated x 100}}{\text{Period Hours x MDC Net}}$

NOTE: if MDC Gross and/or MDC Net have not been determined, the DER is substituted for this quantity for Unit Capacity Factor calculations.

UNIT FORCED OUTAGE RATE	$\frac{\text{Forced Outage Hours}}{\text{Unit Service Hours + Forced Outage Hours}}$
UNIT RESERVE SHUTDOWN	The removal of the unit from on-line operation for economic or other similar reasons when operation could have been continued.
UNIT RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the unit was in reserve shutdown mode.
UNIT SERVICE FACTOR	$\frac{\text{Unit Service Hours x 100}}{\text{Period Hours}}$
UNIT SERVICE HOURS	See "Hours Generator On-Line."

	GE BWR's	W PWR's	CE PWR's	B&W PWR's	All PWR's
NET ELECTRICAL PRODUCTION	6,423,608	8,351,820	2,503,204	862,007	11,717,031
MDC NET	17,327	18,428	6,090	6,737	31,255
CFMDC	51.6	63.1	57.2	17.8	52.2

Capacity factor in this page, denoted as CFMDC, is a function of the net maximum dependable capacity. See the corresponding definition in the Glossary. The vendor averages are computed by the formula :

$$\frac{\text{Net Electrical Energy Produced by Vendor}}{\text{Potential Electrical Production By Vendor In This Month.}} \times 100\%$$

Units Excluded	Reason for Exclusion
Indian Point 1 Humboldt Bay Three Mile Island 2	Unit Shutdown Indefinitely
Big Rock Point	Not Representative of Typical BWRs
LaCroise	Not Representative of Typical BWRs and Atypical Vendor
Fort St. Vrain	Atypical Vendor and Reactor Design

AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIALLY OPERATING UNITS

This chart depicts the average daily power level for the units in commercial operation during the month.

The straight line on the graph labelled "SUM OF MAX. DEPEND. CAP." is plotted at the value shown by summing the separate maximum dependable capacities of the commercially operating units (in Net MWe). The plot shown below the line is calculated by summing the separate average daily power levels of the commercially operating units for each day of the month.

The scale on the left vertical axis runs in 1,000 MWe increments from 0 to 55,000 MWe (Net). The right vertical axis shows the percentage in 10% increments, up to 100% of the "SUM OF MAX. DEPEND. CAP."

It should be recognized that the 100% line would be obtainable only if all of the commercially operating units operated at 100% capacity, 24 hours per day, for the entire month. In other words, since any power generator must occasionally shut down to refuel and/or perform needed maintenance, and also since 100% capacity production is not always required by power demands, the 100% line is a theoretical goal and not a practical one.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 50.59B, THE LICENSEE FAILED TO RETAIN WRITTEN SAFETY EVALUATIONS FOR TWO DESIGN CHANGES IN THE FACILITY AS DESCRIBED IN THE FSAR.
(8005 DEFICIENCY)

CONTRARY TO TECH. SPEC. 4.4.1.2.5 THE UNIT 1 REACTOR BUILDING PERSONNEL HATCH DOOR WAS NOT LEAK TESTED AFTER PERSONNEL ENTRIES INTO THE REACTOR BUILDING ON 20,21, AND 22 JUNE AND 20 OCT. 1979.
(8005 INFRACTION)

CONTRARY TO A COMMITMENT MADE BY THE LICENSEE IN A LETTER TO THE COMMISSION DATED SEPTEMBER 24, 1979, IN RESPONSE TO I E BULLETIN 79-21, THE LICENSEE FAILED TO PROVIDE POST ACCIDENT LEVEL INSTRUMENT CORRECTION FACTORS TO THE PLANT OPERATORS.
(8005 DEVIATION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

NUMBER 2 LOW PRESSURE TURBINE HAS DISKS REMOVED DUE TO STRESS CRACKING DISCOVERED DURING THE LAST OUTAGE. GENERATOR OUTPUT IS REDUCED BY ABOUT 10%.

FACILITY ITEMS (PLANS AND PROCEDURES):

MANAGERIAL ITEMS

PLANT STATUS:

ON 4/19/80, THE UNIT WAS SHUT DOWN FOR MODIFICATIONS TO NON NUCLEAR INSTRUMENTATION SYSTEM. +

LAST IE SITE INSPECTION DATE: FEBRUARY 22 - MARCH 21, 1980 +

INSPECTION REPORT NO: 50-313/80-05 +

SUMMARY

INSPECTION SUMMARY

+ INSPECTION CONDUCTED DURING PERIOD OF FEBRUARY 22 - MARCH 21, 1980 (80-05): ROUTINE, ANNOUNCED INSPECTION INCLUDING SURVEILLANCE TESTING, SURVEILLANCE TEST WITNESSING, FOLLOW-UP ON PREVIOUSLY IDENTIFIED ITEMS, AND FOLLOW-UP ON IE BULLETINS. WITHIN THE FOUR AREAS INSPECTED, TWO ITEMS OF NONCOMPLIANCE AND ONE DEVIATION WERE IDENTIFIED (DEFICIENCY - UNREVIEWED SAFETY QUESTION EVALUATION, INFRACTION - LEAK TESTS OF PERSONNEL AIR LOCK, DEVIATION - IE BULLETIN COMMITMENT).

NRC POWER RESTRICTIONS: NONE

80-02	04/07/80	F	20.7	H	3		ZZ	ZZZZZZ	THE CAUSE OF THE OUTAGE WAS THE LOSS OF ALL OFF SITE POWER BECAUSE OF TORNADO DAMAGE TO TRANSMISSION LINES.
80-03	04/19/80	S	264.1	F	1		ZZ	ZZZZZZ	THE OUTAGE WAS ADMINISTRATIVELY AUTHORIZED FOR ECONOMIC REASONS.

SUMMARY

OPERATION WAS ROUTINE UNTIL 04/07/80, WHEN THE UNIT TRIPPED OFF LINE DUE TO LOSS OF ALL 500 KV LINES DUE TO TORNADO DAMAGE. FOLLOWING RETURN TO POWER ON 04/08/80, LOAD WAS LIMITED BECAUSE OF LINE DAMAGE ACROSS THE STATE. THE UNIT WAS TAKEN OFF LINE FOR THE REST OF THE REPORT PERIOD ON 04/19/80, WITH UNIT 2 CARRYING THE LOAD. MAINTENANCE DURING THE OUTAGE INCLUDED CRYSTAL RIVER MODIFICATIONS, HIGH PRESSURE TURBINE STEAM SEAL REPAIR, AND REPAIR OF A LOW PRESSURE TURBINE/CONDENSER EXPANSION JOINT.

80-12	04/25/80	F	4.1	A	3		RB	INSTRU	CEAC ROD POSITION INDICATION WAS INTERMITTANTLY LOST. CEAC'S WERE PUT IN THE INOP. MODE FOLLOWING OUTAGE #80-12.

SUMMARY

A REACTOR TRIP OCCURRED ON 04/02/80 FROM LOSS OF A MAIN FEEDWATER PUMP WHEN A BREAKER IN ONE OF THE BREAKER PANELS WAS CYCLED. WEATHER CONDITIONS CAUSED LOSS OF OFFSITE POWER ON 04/07/80, AND THE UNIT REMAINED SHUTDOWN UNTIL 04/19/80 FOR MAINTENANCE. UNIT TRIPS OCCURRED ON 04/24/80 AND 04/25/80 DUE TO INTERMITTENT LOSS OF CONTROL ELEMENT ASSEMBLY POSITION INDICATION.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 50, APP. B, CRITERION XII; THE BVPS FSAR, APPENDIX A.2.2.12; AND, THE BVPS MAINTENANCE MANUAL, CHAPTER 1, SECTION 8, REV. 4, EIGHT INSTRUMENTS ASSOCIATED WITH BOTH EMERGENCY DIESEL GENERATORS AND TWO INSTRUMENTS ASSOCIATED WITH THE MAIN CARDOX FIRE SUPPRESSION UNIT WERE NOT CALIBRATED ON OR BEFORE THEIR REQUIRED DUE DATES. ADDITIONALLY, ONE INSTRUMENT ASSOCIATED WITH THE CARDOX UNIT WAS NOT INCLUDED ON THE APPROVED CALIBRATION SCHEDULE AND WAS NOT THE SUBJECT OF AN APPROVED CALIBRATION PROCEDURE.
(8001 DEFICIENCY)

CONTRARY TO TS 3.3.3.1, ON JANUARY 23, 1980, RADIATION MONITORS RM-VS-104A, RM-VS-104B, AND RM-215B HAD INCORRECTLY ESTABLISHED ALARM/TRIP SETPOINTS IN THAT THE SETPOINTS FOR OPERATION IN MODE 6 (REFUELING) HAD NOT BEEN ESTABLISHED PRIOR TO ENTERING THAT MODE.
(8001 INFRACTION)

CONTRARY TO TS 6.8.1.A; REGULATORY GUIDE 1.33-1972; AND THE BVPS OPERATING MANUAL, CHAPTER 1.48.D.5, REV. 7, A TEMPORARY JUMPER WAS LEFT INSTALLED ON RCS TEMPERATURE RECORDER NO. T-RC-448B WITHOUT IMPLEMENTING THE CONTROLS REQUIRED BY THE ABOVE.
(8001 DEFICIENCY)

CONTRARY TO TS 6.8.1.C AND THE BVPS CHEMISTRY MANUAL, CHAPTER 3, PART 7, REACTOR PLANT SAMPLE SYSTEM, REVISION 1, A PLANT CHEMIST FAILED TO FOLLOW THE APPROVED CHEMISTRY MANUAL PROCEDURES FOR RETURN TO NORMAL VALVE ALIGNMENTS FOLLOWING THE PROCESSING OF A PRIMARY SAMPLE ON FEBRUARY 7, 1980 IN THAT THE COMPLETE PROCEDURE WAS NOT PROPERLY PERFORMED.
(8001 INFRACTION)

10 CFR 50, APP B, CRITERION V STATES IN PART, "ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS, PROCEDURES...AND SHALL BE ACCOMPLISHED IN ACCORD WITH THESE INSTRUCTIONS, PROCEDURES..." LICENSEE MAINTENANCE MANUAL CHAPTER 1, CONDUCT OF MAINTENANCE, SECTION J, HOUSEKEEPING, REVISION 4 DTD 9/10/79 STATES IN PART, "THE ENTIRE STATION WILL BE TOURED ONCE A MONTH...RESPONSIBLE SUPERVISORS...ENSURE THAT ALL AREAS ARE CLEANED..." CONTRARY TO THE ABOVE, THE LICENSEE DID NOT CONDUCT STATION HOUSEKEEPING TOURS DURING THE MONTHS OF 12/79 & 1/80.
(8003 INFRACTION)

CONTRARY TO TS 6.8.1.A, RG 1.33, APP A, PARAGRAPH H.1, & STATION QA PROCEDURE OP-12, DATA WAS NOT RECORDED FOR CALIBRATION OF A RAMP GENERATOR USED AS A TEST INSTRUMENT IN THE FUNCTIONAL TEST OF A REACTOR COOLANT LOOP FLOW CHANNEL, & DATA WAS OUT OF TOLERANCE FOR CALIBRATION OF DECADE RESISTANCE BOX USED AS A TEST INSTRUMENT IN CALIBRATION OF A DELTA T-TAVG PROTECTION CHANNEL.
(8005 DEFICIENCY)

CONTRARY TO TS 6.8.1.A, RG 1.33, APP A, PARAGRAPH A & BVPS-OM 1.48.3.E.6 & 1.48.9.L, A LOG SHEET WAS IN USE LOGGING METEORLOGICAL INSTRUMENTS WHICH DID NOT HAVE THE LATEST TEMPORARY CHANGE POSTED, & THE LATEST REVISION WAS NOT POSTED TO COPIES OF THE OPERATING MANUALS IN THE CONTROL ROOM & CONTROL ROOM SHIFT SUPERVISORS OFFICE.
(8005 DEFICIENCY)

CONTRARY TO TS 6.8.1.A & RG 1.33, APP A, PARAGRAPH H.1, A PROCEDURE PREPARED FOR CALIBRATION OF REFUELING WATER STORAGE TANK LEVEL INSTRUMENT LOOP "D" DID NOT CONTAIN THE PROPER CALIBRATION INPUT SIGNALS TO REFLECT A MODIFICATION TO THIS LOOP "D" LEVEL RECORDER WAS ACCOMPLISHED W/O USE OF THE EXISTING PROCEDURE FOR THIS CALIBRATION.
(8005 INFRACTION)

CONTRARY TO TS 6.8.1.A & 6.10.1.D & RG 1.33, APP A, PARAGRAPH H.2, CALIBRATIONS OF SEISMIC & METEOROLOGICAL INSTRUMENTATION AS REQUIRED BY TS WERE PERFORMED BY USE OF VENDOR PROCEDURES WHICH WERE UNREVIEWED & UNAPPROVED BY THE LICENSEE & RECORDS OF METEOROLOGICAL CALIBRATIONS WERE NOT MAINTAINED BY THE LICENSEE.
(8005 DEFICIENCY)

INSPECTION STATUS

Current outage expected to last until 7/80.

PLANT STATUS:

Shutdown since 11/79 for refueling, modification, and maintenance.

LAST IE SITE INSPECTION DATE: 4/24/80

INSPECTION REPORT NO: 50-334/80-09

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-001/ 5P	02/26/80	03/05/80	Shut down motor driven fire pump 00S due overheated bearing. Portable diesel pump to be used for water supply for outage activities
80-002/ 5P	02/25/80	04/03/80	False alarms due to the malfunctions of seismic instrumentation
80-007/ 01T	02/21/80	03/04/80	Supplementary leak flow not lined up to main filter as required during portion of refueling operation
80-008/ 01T	02/25/80	03/04/80	Potential SSE overstress of cable spreading room floor beams from horizontal acceleration of conduit and tray supports on lower flange of the steel beams
80-009/ 03L	02/01/80	02/29/80	Emergency diesel load sequencer inop due to improper wiring connections
80-010/ 03L	01/31/80	03/04/80	Refueling core alterations stopped when boric acid transfer pump tripped on thermal overload
80-011/ 03L	02/26/80	03/04/80	Charging system fill to RCS MOV-SI-869A linestarter failure during surveillance, with MOV-CH-1-15C also not closing due to dirty torque switch and MOV-CH-115E used to effect isol
80-012/ 01T	03/12/80	03/31/80	Remote shutdown panel channel checks for aux feed water not done monthly since 8/76 due normal op RDG of zero but TS not changed & alternative testing not instituted
80-013/ 03T	03/02/80	03/20/80	Cooling tower blowdown temp meter 00S high but recalibrated before OPS with blowdown temp above spec (75 degrees F)
80-014/ 04T	03/07/80	03/21/80	Hi-Hi radiation alarm and discharge VLV closure inop due to loose loose relay/solder joints. Recheck of discharges verified no limits exceeded
80-015/ 04T	03/08/80	03/21/80	Component cooling water hi-hi radiation alarm inop due to out of adjustment potentiometer
80-016/ 03L	03/11/80	03/31/80	Remote shutdown panel aux feed flow meters not tested as meter was deleted from data sheet. No affect on public health and safety in future tests. These matters to be checked
80-017/ 01T	03/26/80	04/08/80	Combined main steam safety blowdown, obe, pressure, and dead lead stresses on safety valve header
80-018/ 01T	03/26/80	04/08/80	System pressure failure of fire suppression water system
80-019/ 03L	03/10/80	04/08/80	Stress corrosion crack in a channel head of the liquid waste evaporator bottoms heat exchanger

SUMMARY

INSPECTION SUMMARY

50-334/80-01 - Jan 14 - Feb 8: Routine inspection by the (129 hours). resident inspector and region-based inspectors findings; Inspection areas (8): action on previous inspection operations; plant operations; refueling preparations; refueling of periodic IE Bulletin followup; licensee event review; review security. reports; and review of physical protection/plant administrative Noncompliances (4): Inadequate implementation of setpoints controls for jumpers/lifted leads; Radiation Monitor Chem- set in excess of allowable TS limits; Failure to follow as istry Manual Procedures; Failure to calibrate instruments required.

SUMMARY

INSPECTION SUMMARY

* Inspection on February 28-29 and March 10-14, (80-03): Routine, unannounced inspection of the licensee's training and retraining program; surveillance activities; calibration program; procedure changes and training with regard to Small Break Loss of Coolant Accident (SBLOCA); and followup actions relative to IE Bulletins, IE Circulars, and Licensee Event Reports. The inspection involved 65 inspector hours onsite by two NRC inspectors. No items of noncompliance or deviations were identified.

LAST IE SITE INSPECTION DATE: MARCH 7 - APRIL 4, 1980

INSPECTION REPORT NO: 50-259/80-19

SUMMARY

INSPECTION SUMMARY

+ INSPECTION JANUARY 14 - FEBRUARY 1 (80-06): THIS ROUTINE INSPECTION INVOLVED 28 RESIDENT INSPECTOR-HOURS IN THE AREAS OF PLANT OPERATIONS, PLANT TOURS, REPORTABLE OCCURRENCES, REFUELING, NONCOMPLIANCE FOLLOWUP, IE BULLETIN FOLLOWUP, PLANT PHYSICAL PROTECTION AND RADIATION AREA CONTROLS. OF THE EIGHT AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 26-28 (80-09): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 13 INSPECTOR-HOURS ON SITE IN THE AREAS OF SMALL BREAK LOSS OF COOLANT ACCIDENT PROCEDURES AND TRAINING. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 11-14 (80-12): INCLUDED REVIEW OF THE LICENSEE'S SECURITY PLAN, SECURITY ORGANIZATION, ACCESS CONTROLS TO PROTECTED AND VITAL AREAS, PROTECTED AND VITAL AREA BARRIERS, AND LICENSEE ACTION ON PREVIOUS INSPECTION FINDINGS. THIS SPECIAL INSPECTION WAS IN RESPONSE TO A SERIES OF REPORTED INCIDENTS AT THE BROWNS FERRY NUCLEAR PLANT, BEGINNING IN EARLY FEBRUARY 1980. THE INSPECTION INVOLVED 10 INSPECTOR-HOURS ON SITE. THE INSPECTION WAS BEGUN DURING A REGULAR PERIOD; 3 INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE AREAS EXAMINED DURING THE INSPECTION.

INSPECTION FEBRUARY 4 - MARCH 7 (80-13): THIS ROUTINE INSPECTION INVOLVED 46 RESIDENT INSPECTOR-HOURS IN THE AREAS OF PLANT OPERATIONS, PLANT TOURS, REPORTABLE OCCURRENCES, REFUELING, PLANT PHYSICAL PROTECTION, AND RADIATION AREA CONTROLS. OF THE SIX AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FIVE AREAS. ONE ITEM OF APPARENT NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO DEMONSTRATE HPCI OPERABLE WHEN RCIC WAS INOPERATIVE FOR MAINTENANCE).

INSPECTION MARCH 13-14 (80-14): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 12 INSPECTOR-HOURS ON SITE IN THE AREA OF HPCI SYSTEM PIPING AND RESTRAINT WORK ACTIVITIES. OF THE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 19-20 (80-15): THIS SPECIAL ANNOUNCED INSPECTION INVOLVED 4 INSPECTOR-HOURS IN THE AREA OF SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS (IE BULLETIN 79-14). NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 24-28 AND MARCH 31 - APRIL 4 (80-16): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 28 INSPECTOR-HOURS ON SITE AND 6 INSPECTOR-HOURS OFF SITE IN THE AREAS OF COORDINATION WITH OUTSIDE SUPPORT AGENCIES; EMERGENCY FACILITIES, EQUIPMENT AND PROCEDURES; EMERGENCY TRAINING; EMERGENCY PLANNING AUDITS; EMERGENCY DRILLS; FOLLOWUP ON PREVIOUSLY IDENTIFIED INSPECTION FINDINGS AND FOLLOWUP ON IE BULLETINS. OF THE SEVEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SIX AREAS; TWO ITEMS OF NONCOMPLIANCE WERE FOUND IN ONE AREA (INFRACTION - FAILURE TO PREPARE AND ADHERE TO WRITTEN PROCEDURES; AND INFRACTION - FAILURE TO CONDUCT EMERGENCY TRAINING FOR ALL DESIGNATED EMERGENCY DIRECTORS).

INSPECTION MARCH 7 - APRIL 4 (80-19): THIS ROUTINE INSPECTION INVOLVED 42 RESIDENT INSPECTOR-HOURS IN THE AREAS OF OPERATIONAL SAFETY, MAINTENANCE, REPORTABLE OCCURRENCES, FOLLOWUP ON NONCOMPLIANCE AND UNRESOLVED ITEMS, RADIATION CONTROL, PLANT PHYSICAL PROTECTION AND REACTOR TRIPS. OF THE SEVEN AREAS INSPECTED NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN SIX AREAS. ONE ITEM OF APPARENT NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO FOLLOW PROCEDURES IN HEAT-TREATMENT OF UNIT HPCI 1 STEAM PIPING).

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 6.3.A, DETAILED WRITTEN PROCEDURES SHALL BE PREPARED, APPROVED AND ADHERED TO FOR SURVEILLANCE AND TESTING REQUIREMENTS. CONTRARY TO THE ABOVE, ON DECEMBER 21, 1979 A LEAK TEST OF THE UNIT 2 SOUTHEAST EQUIPMENT HATCH WAS PERFORMED USING AN OUTDATED SECTION, 5.1.6, OF SURVEILLANCE INSTRUCTION 4.7.A.2.G-2, PRIMARY CONTAINMENT TESTABLE PENETRATIONS, WHICH HAD BEEN SUPERCEDED BY AN APPROVED REVISION DATED 11/27/79.

SUMMARY

INSPECTION SUMMARY

INSPECTION JANUARY 14 - FEBRUARY 1 (80-06): THIS ROUTINE INSPECTION INVOLVED 27 RESIDENT INSPECTOR-HOURS IN THE AREAS OF PLANT OPERATIONS, PLANT TOURS, REPORTABLE OCCURRENCES, REFUELING, NONCOMPLIANCE FOLLOWUP, IE BULLETIN FOLLOWUP, PLANT PHYSICAL PROTECTION AND RADIATION AREA CONTROLS. OF THE EIGHT AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 26-28 (80-09): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 13 INSPECTOR-HOURS ON SITE IN THE AREAS OF SMALL BREAK LOSS OF COOLANT ACCIDENT PROCEDURES AND TRAINING. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 11-14 (80-10): INCLUDED REVIEW OF THE LICENSEE'S SECURITY PLAN, SECURITY ORGANIZATION, ACCESS CONTROLS TO PROTECTED AND VITAL AREAS, PROTECTED AND VITAL AREA BARRIERS, AND LICENSEE ACTION ON PREVIOUS INSPECTION FINDINGS. THIS SPECIAL INSPECTION WAS IN RESPONSE TO A SERIES OF REPORTED INCIDENTS AT THE BROWNS FERRY NUCLEAR PLANT, BEGINNING IN EARLY FEBRUARY 1980. THE INSPECTION INVOLVED 10 INSPECTOR-HOURS ON SITE. THE INSPECTION WAS BEGUN DURING A REGULAR PERIOD; 2 INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE AREAS EXAMINED DURING THE INSPECTION.

INSPECTION FEBRUARY 4 - MARCH 7 (80-11): THIS ROUTINE INSPECTION INVOLVED 46 RESIDENT INSPECTOR-HOURS IN THE AREAS OF PLANT OPERATIONS, PLANT TOURS, REPORTABLE OCCURRENCES, REFUELING, PLANT PHYSICAL PROTECTION, AND RADIATION AREA CONTROLS. OF THE SIX AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FIVE AREAS. ONE ITEM OF APPARENT NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO DEMONSTRATE HPCI OPERABLE WHEN RCIC WAS INOPERATIVE FOR MAINTENANCE).

INSPECTION MARCH 19-20 (80-12): THIS SPECIAL ANNOUNCED INSPECTION INVOLVED 4 INSPECTOR-HOURS IN THE AREA OF SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS (IE BULLETIN 79-14). NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 24-28 AND MARCH 31 - APRIL 4 (80-13): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 20 INSPECTOR-HOURS ON SITE AND 6 INSPECTOR-HOURS OFF SITE IN THE AREAS OF COORDINATION WITH OUTSIDE SUPPORT AGENCIES; EMERGENCY FACILITIES, EQUIPMENT AND PROCEDURES; EMERGENCY TRAINING; EMERGENCY PLANNING AUDITS; EMERGENCY DRILLS; FOLLOWUP ON PREVIOUSLY IDENTIFIED INSPECTION FINDINGS AND FOLLOWUP ON IE BULLETINS. OF THE SEVEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SIX AREAS; TWO ITEMS OF NONCOMPLIANCE WERE FOUND IN ONE AREA (INFRACTION - FAILURE TO PREPARE AND ADHERE TO WRITTEN PROCEDURES; AND INFRACTION - FAILURE TO CONDUCT EMERGENCY TRAINING FOR ALL DESIGNATED EMERGENCY DIRECTORS).

INSPECTION MARCH 7 - APRIL 4 (80-14): THIS ROUTINE INSPECTION INVOLVED 42 RESIDENT INSPECTOR-HOURS IN THE AREAS OF OPERATIONAL SAFETY, MAINTENANCE, REPORTABLE OCCURRENCES, FOLLOWUP ON NONCOMPLIANCE AND UNRESOLVED ITEMS, RADIATION CONTROL, PLANT PHYSICAL PROTECTION AND REACTOR TRIPS. OF THE SEVEN AREAS INSPECTED NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN SIX AREAS. ONE ITEM OF APPARENT NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO FOLLOW PROCEDURES IN HEAT-TREATMENT OF UNIT 1 STEAM PIPING).

NRC POWER RESTRICTIONS: NONE

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
132	04/15/80	F	8.0	G	3				LOW RX WATER LEVEL SIGNAL DUE TO INADVERTANT OPENING OF MAIN STEAM FLOW CONTROL CIRCUIT.
133	04/19/80	F	.0	B	5				DERATED TO TAKE "C" HP STRING HEATERS OUT OF SERVICE FOR TESTING.
134	04/22/80	F	75.0	G	3				HI RX WATER LEVEL SIGNAL DUE TO PERSONNEL ERROR DURING S.I.
135	04/27/80	F	.0	B	5				DERATED TO TAKE "C" STRING L. P. HEATERS OUT OF SERVICE FOR MAINTENANCE.

SUMMARY

OPERATION WAS AT NEAR FULL POWER UNTIL 04/15/80 WHEN THE INADVERTENT OPENING OF THE MAIN STEAM FLOW CONTROL CIRCUIT CAUSED LOW REACTOR WATER LEVEL. THE UNIT WAS TAKEN OFF LINE ON 04/22/80 WHEN HIGH REACTOR WATER LEVEL RESULTED FROM PERSONNEL ERROR DURING A SAFETY INJECTION.

INSPECTION STATUS

ENFORCEMENT STATUS

THE PLANT NUCLEAR SAFETY COMMITTEE DID NOT PERFORM THE REQUIRED INVESTIGATION OF THE MISSING TEST DATA FOR THE MAY 1979 TESTS OF THE FIRE ALARM SYSTEMS FOR THE SERVICE WATER INTAKE STRUCTURE AND CONTROL BUILDINGS AS REQUIRED BY SECTION 6.5.1.6.E OF THE TECHNICAL SPECIFICATION.
(8011 INFRACTION)

SURVEILLANCE TEST PROCEDURES DO NOT REQUIRE INSPECTION OF ALL FIRE PROTECTION CONTROL VALVES, DIESEL ENGINE FOR DIESEL DRIVEN FIRE PUMP AND ALL OF THE FIRE BARRIER PENETRATIONS AS REQUIRED BY SECTIONS 6.8.1.C, 6.8.1.F, 4.7.7.1.1.C AND 4.7.7.1.2.C OF THE TECHNICAL SPECIFICATIONS.
(8011 INFRACTION)

THE ARRANGEMENT OF THE WATER FLOW ALARM DEVICES FOR THE STANDBY GAS TREATMENT DELUGE SYSTEMS DO NOT COMPLY WITH THE CRITERIA OF NFPA-13 AS REQUIRED BY SECTION IV.C.3.C OF THE FIRE PROTECTION PROGRAM REVIEW.
(8011 DEVIATION)

SUMMARY

INSPECTION SUMMARY

+ INSPECTION MARCH 17-20 (80-10): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 12 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSERVICE INSPECTION WORK OBSERVATION AND DATA REVIEW, INSERVICE INSPECTION PROGRAM REVIEW, TORUS MODIFICATION WORK OBSERVATION. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 31 AND APRIL 1-3 (80-11): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 15 INSPECTOR-HOURS ON SITE IN THE AREAS OF FIRE PROTECTION/PREVENTION. OF THE AREAS INSPECTED, TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND (INFRACTION-INADEQUATE SURVEILLANCE PROCEDURES FOR FIRE PROTECTION SYSTEMS REQUIRED BY TECHNICAL SPECIFICATIONS; AND INFRACTION-INADEQUATE REVIEW OF FIRE PROTECTION TECHNICAL SPECIFICATION VIOLATIONS), AND ONE DEVIATION WAS FOUND (DEVIATION-INADEQUATE WATER FLOW ALARMS FOR STANDBY GAS TREATMENT DELUGE VALVES).

INSPECTION FEBRUARY 29 - MARCH 29, 1980 (80-12): THIS ROUTINE INSPECTION INVOLVED 31.5 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONTROL ROOM OBSERVATIONS, REVIEWS OF OPERATOR LOGS, TAGOUT OF SYSTEMS, TOURS OF VITAL AREAS, PHYSICAL SECURITY, RADIATION PROTECTION, HOUSEKEEPING AND CLEANLINESS, FIRE PROTECTION, AND FOLLOWUP ON PLANT TRIPS. THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED 35 MANHOURS OF INSPECTION IN THE NINE AREAS IDENTIFIED ABOVE. OF THE NINE AREAS INSPECTED NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
009	03/31/80	F	50.8	H	4		EC	TRANSF	REACTOR SCRAM ON LOW WATER LEVEL DUE TO AN APPARENT LOSS OF "1D" BUS. THE "1D" BUS FEEDER BREAKER FROM THE START-UP AUXILIARY TRANSFORMER WAS REMOVED FROM THE CABINET FOR PREVENTATIVE MAINTENANCE. THE "1D" BUS FEEDER BREAKER FROM THE UNIT AUXILIARY TRANSFORMER TRIPPED, CAUSING A TOTAL LOSS OF THE 1D BUS.
010	04/03/80	F	42.0	B	5		SF	TURBIN	POWER LIMITED TO APPROXIMATELY 25% OF FULL POWER BECAUSE OF PROBLEMS WITH THE HPCI AUTOMATIC START TEST AND A STEAM LEAK ON HPCI STEAM TRAP BYPASS VALVE.
011	04/05/80	F	30.2	B	3		HJ	VALVEX	REACTOR SCRAMMED AFTER A TURBINE TRIP. THE TURBINE TRIPPED BECAUSE OF HIGH VIBRATION. A CONTROL VALVE PERIODIC TEST WAS IN PROGRESS. THE OUTAGE WAS EXTENDED APPROXIMATELY 16 HOURS DUE TO "INDICATED" LEAKAGE INSIDE THE DRY-WELL EXCEEDING THE AMOUNT OF LEAKAGE ALLOWED BY TECHNICAL SPECIFICATIONS.
012	04/08/80	F	124.6	B	3		EC	ELECON	REACTOR SCRAM FROM A TURBINE TRIP. THE TURBINE TRIP OCCURRED IMMEDIATELY FOLLOWING A "QUICK START" PERIODIC TEST ON #2 DIESEL GENERATOR. AN EXTENSIVE INVESTIGATION REVEALED THE PROBLEM TO BE AN ELECTRICAL GROUND ON #2 DIESEL GENERATOR IN CONJUNCTION WITH THE LOW ELECTRICAL GROUND ON THE DISTRIBUTION SYSTEM.
013	04/15/80	F	50.5	B	3		EC	ELECON	REACTOR SCRAM FROM A TURBINE TRIP. THE TURBINE TRIPPED WHEN STARTING #2 DIESEL GENERATOR. THE PROBLEM WAS A REPLICA OF AN EARLIER OUTAGE (SEE OUTAGE NO. 80-011) WHEN AN ELECTRICAL GROUND ON #2 DIESEL GENERATOR CAUSED A TURBINE TRIP.
014	04/22/80	F	35.0	A	5		HC	HTEXCH	REDUCED POWER TO PERFORM CONDENSER WATERBOX WORK.
015	04/26/80	F	19.7	A	1		SA	VALVEX	UNIT SEPARATED FROM THE GRID BECAUSE OF EXCESSIVE DRYWELL LEAKAGE. AN INVESTIGATION REVEALED A PACKING LEAK ON THE RECIRCULATION LINE SAMPLE VALVE. THE PACKING WAS REPLACED AND ADJUSTMENTS TO THE VALVE WERE MADE.

SUMMARY

THE UNIT REMAINED OFF LINE UNTIL 04/03/80 FOLLOWING LAST MONTH'S TRIP OF THE UNIT AUXILIARY TRANSFORMER FEEDER BREAKER AND SUBSEQUENT REACTOR SCRAM. REACTOR SCRAMS ALSO OCCURRED ON 04/05/80 FOLLOWING A TURBINE TRIP DURING A CONTRO VALVE PERIODIC TEST, AND ON 04/08/80 AND 04/15/80 FROM PROBLEMS WITH ELECTRICAL GROUNDS. EXCESSIVE DRYWELL LEAKAGE ON 04/26/80 REQUIRED REPACKING OF A VALVE.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 50, APPENDIX "B", SECTION V, ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS AND PROCEDURES OF A TYPE APPROPRIATE TO THE CIRCUMSTANCES. ANSI N18.7 1972 - AS COMMITTED TO BY THE CAROLINA POWER AND LIGHT COMPANY QUALITY ASSURANCE PROGRAM REQUIRES IN SECTION 5.2.7 THAT MAINTENANCE OF EQUIPMENT SHALL BE PERFORMED IN ACCORDANCE WITH WRITTEN PROCEDURES. CONTRARY TO THE ABOVE MAINTENANCE WAS PERFORMED ON NOVEMBER 29, 1979 FOR UNIT 2 DURING WHICH A FLEXIBLE CONDUIT TO FLOW SWITCH E11-FSL-N021A. (SEE LER 2-79-98 OF DECEMBER 21, 1979) WAS REPLACED WITHOUT AN ADEQUATE PROCEDURE.
(8005 INFRACTION)

AS REQUIRED BY SECTION 7.1.1 - LOCAL AREA EVACUATION OF THE BRUNSWICK STEAM ELECTRIC PLANT - EMERGENCY PLAN, "GENERALLY, PERSONNEL SHALL EVACUATE THE LOCAL AREA WHERE AN AREA RADIATION ALARM OR AIRBORNE ACTIVITY ALARM IS RECEIVED AND CONSIDERED ABNORMAL AND UNEXPLAINED BY OPERATIONS PERSONNEL . . . PERSONNEL NOT MEMBERS OF THE SHIFT OPERATIONS CREW SHALL EVACUATE TO THE PRIMARY ASSEMBLY AREA, WHERE A HEAD COUNT OF PERSONNEL ACCOUNTING WILL BE MADE, DOSE DETERMINATIONS MADE AND PERSONNEL MONITORED FOR CONTAMINATION AS NECESSARY." CONTRARY TO THE ABOVE, ON FEBRUARY 14, 1980, FOLLOWING UNIT 2 REACTOR TRIP AND EVACUATION OF THE REACTOR BUILDING, A HEAD COUNT OF PERSONNEL IN THE REACTOR BUILDING WAS NOT PROMPTLY MADE AS REQUIRED BY THE EMERGENCY PLAN, AND SOME PERSONNEL REMAINED IN THE REACTOR BUILDING FOR AS LONG AS FORTY-THREE MINUTES FOLLOWING THE EVACUATION.
(8008 INFRACTION)

THE PLANT NUCLEAR SAFETY COMMITTEE DID NOT PERFORM THE REQUIRED INVESTIGATION OF THE MISSING TEST DATA FOR THE MAY 1979 TESTS OF THE FIRE ALARM SYSTEMS FOR THE SERVICE WATER INTAKE STRUCTURE AND CONTROL BUILDINGS AS REQUIRED BY SECTION 6.5.1.6.E OF THE TECHNICAL SPECIFICATION.
(8010 INFRACTION)

SURVEILLANCE TEST PROCEDURES DO NOT REQUIRE INSPECTION OF ALL FIRE PROTECTION CONTROL VALVES, DIESEL ENGINE FOR DIESEL DRIVEN FIRE PUMP AND ALL OF THE FIRE BARRIER PENETRATIONS AS REQUIRED BY SECTIONS 6.8.1.C, 6.8.1.F, 4.7.7.1.1.C AND 4.7.7.1.2.C OF THE TECHNICAL SPECIFICATIONS.
(8010 INFRACTION)

THE ARRANGEMENT OF THE WATER FLOW ALARM DEVICES FOR THE STANDBY GAS TREATMENT DELUGE SYSTEMS DO NOT COMPLY WITH THE CRITERIA OF NFPA-13 AS REQUIRED BY SECTION IV.C.3.C OF THE FIRE PROTECTION PROGRAM REVIEW.
(8010 DEVIATION)

SUMMARY

INSPECTION SUMMARY

- INSPECTION MARCH 17-20 (80-09): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 12 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSERVICE INSPECTION WORK OBSERVATION AND DATA REVIEW, INSERVICE INSPECTION PROGRAM REVIEW, TORUS MODIFICATION WORK OBSERVATION. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.
- INSPECTION MARCH 31 - APRIL 1-3 (80-10): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 14 INSPECTOR-HOURS ON SITE IN THE AREAS OF FIRE PROTECTION/PREVENTION. OF THE AREAS INSPECTED, TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND (INFRACTION-INADEQUATE SURVEILLANCE PROCEDURES FOR FIRE PROTECTION SYSTEMS REQUIRED BY TECHNICAL SPECIFICATIONS; AND INFRACTION-INADEQUATE REVIEW OF FIRE PROTECTION TECHNICAL SPECIFICATION VIOLATIONS), AND ONE DEVIATION WAS FOUND (DEVIATION-INADEQUATE WATER FLOW ALARMS FOR STANDBY GAS TREATMENT DELUGE VALVES).
- INSPECTION FEBRUARY 29 - MARCH 29 (80-12): THIS ROUTINE INSPECTION INVOLVED 31.5 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONTROL ROOM OBSERVATIONS, REVIEW OF OPERATOR LOGS, TAGOUT OF SYSTEMS, TOURS OF VITAL AREAS, PHYSICAL SECURITY, RADIATION PROTECTION, HOUSEKEEPING AND CLEANLINESS, FIRE PROTECTION, AND FOLLOWUP ON PLANT TRIPS. ROUTINE AND REACTIVE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED 28 MANHOURS OF INSPECTION TIME ON SITE IN THE AREAS IDENTIFIED ABOVE. OF THE NINE AREAS INSPECTED NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

SUMMARY

INSPECTION SUMMARY

+ 50-317/80-01 - Feb 4-29: Routine resident inspections (16 hr. onsite, 4 hr. at the Prince Frederick Fire Department) of plant operations including: tours of the facility; log and record reviews; review of licensee events; IE Bulletins; periodic reports; review of plant operations and Safety Review Committee activities; licensee action on previous inspection findings; and, attendance at the NRC/FEMA/BG&E and Public Meeting on Emergency Planning on February 28, 1980. Noncompliances: Two (PORSC failure to review Technical Specification violations identified in NRC inspection reports; procedures inadequate to prevent the shutdown of a diesel generator with a startup signal present.)

+ 50-317/80-02 - Feb 12-15: Investigation of two minor, unplanned gaseous radiation releases on February 11-12, 1980, and of reasons for non-reporting of these releases. The investigation was conducted by the resident inspector (10 hrs.) and 3 region-based personnel (46 hrs.) including a Section Chief, a Radiation Specialist, and an Investigation Specialist. Noncompliances: None for Unit 1.

+ 50-317/80-03 - Mar 10-28: Routine, onsite regular and backshift inspection by the resident inspector (16 hours). Areas inspected included the control room and the accessible portions of the auxiliary, turbine, service, and intake buildings; radiation protection; physical security; fire protection; plant operating records; and reporting to the NRC. Noncompliances: None.

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-002/ 04T	03/22/80	04/03/80	Hourly average condenser temperature rise in excess of limit for 2 hours due to high winds causing low tides, high waves, seaweed in the condenser, and operator inattention
80-013/ 03L	02/25/80	03/25/80	During surveillance 1 channel for containment high pressure tripped outside required value due to a failed signal isolator
80-014/ 03L	03/10/80	04/10/80	During surveillance two sample valves failed to shut on a SI signal due to output relay terminal corrosion. Channel was restored and tested
80-015/ 03L	03/17/80	04/17/80	No. 11 SG aux feed pump OOS for 7.5 hr to repair oil level sightglass
80-020/ 03L	03/14/80	04/14/80	Fire barrier penetration between cable spreading room and turbine bldg not sealed with flamastic fire retardant due to inadequate quality of application
80-021/ 04T	04/04/80	04/16/80	Weekly fuel oil storage tank condensate drainage resulted in oil spill to Chesapeake Bay due to operator error and loss of water seal in oil interceptor. Corrective action includes scheduling evolution during daylight and draining condensate to a pail

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS:

- No significant new information.
- LAST IE SITE INSPECTION DATE: 5/6/80
- INSPECTION REPORT NO: 50-318/80-06

SUMMARY

INSPECTION SUMMARY

- 50-318/80-01 - Feb 4-29: Routine resident inspections (16 hr. onsite, 5 hr. at the Prince Frederick Fire Department) of plant operations including: tours of the facility; log and record reviews; review of licensee events; IE Bulletins; periodic reports; review of plant operations and Safety Review Committee activities; licensee action on previous inspection findings; and, attendance at the NRC/FEMA/BG&E and Public Meeting on Emergency Planning on February 28, 1980. Noncompliances: Three (Failure to make a prompt report following the simul- taneous inoperability of all Unit 2 Diesel Generators; PORSC failure to review Technical Specification violations identi- fied in NRC inspection reports; procedures inadequate to prevent the shutdown of a Diesel Generator with a starting signal present).
- 50-318/80-02 - Feb 12-15: Investigation of two minor, unplanned gaseous radiation releases on February 11-12, 1980, and of reasons for non-reporting of those releases. The investigation was conducted by the resident inspector (20 hrs.) and 3 region-based personnel (70 hrs.) including a Section Chief, a Radiation Specialist and an Investigation Specialist. Noncompliances: Six (Failure to notify the NRC; failure to estimate offsite dose; failure to brief individual making re-entry into evacuated area; failure to follow procedure requiring valve isolation of ion exchanger; failure to follow procedure for placing ion exchanger in service; and, failure to have appropriate procedure sequence for isolating ion exchanger).
- 50-318/80-03 - Mar 10-28: Routine, onsite regular and backshift inspection by the resident inspector (16 hours). Areas inspected included the control room and the accessible portions of the auxiliary, turbine, service, and intake buildings; radiation protection; physical security; fire protection; plant operating records; and reporting to the NRC. Noncompliances: None.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-001/ 03L	02/25/80	03/25/80	Disassembly of #21 containment spray pump instead of #21 low pressure safety injection pump for corrective maintenance due to administrative error
80-010/ 03L	02/24/80	03/24/80	Faulty control element assembly (CEA) 31 and CEA 34 and subsequent drop into the core during surveillance testing
80-013/ 03L	03/03/80	04/02/80	Channel EZF pressure input signal for #22 SG isolation was bypassed and replaced, remaining channels were operable. The signal isolator was found out of calibration
80-015/ 03L	02/27/80	03/25/80	Accidental grounding of the prime 15V power supply to CEA 44 during maintenance and subsequent drop of CEA 44 into the core
80-016/ 03L	03/03/90	03/28/80	An emergency diesel generator was placed out of service for failure to reach rated speed in less than 10 seconds due to governor slow response
80-017/ 03L	03/16/80	04/10/80	The No. 22 saltwater/service water heat exchanger was taken out of service on 3/16 to repair a tube leak. Redundant loop was inservice. Tube was plugged and heat exchanger was returned to service
80-018/ 03L	03/11/80	04/10/80	Leaking weld on 23 charging pump suction relief valve due to vibration induced metal fatigue. Modifications planned for permanent fix
80-019/ 03L	03/12/80	03/25/80	Separation criteria violated in Cable Spreading Room by incorrect routing of cable #A2Y02929P
80-020/ 03L	03/20/80	04/18/80	Repetitive, but intermittent channel D RPS trip condition from undeter- mined cause, with channel bypassed during its intermittent trip periods
80-021/ 03L	03/18/80	04/18/80	No. 23 saltwater pump start failure during surveillance due to faulty relay socket

*LAST IE SITE INSPECTION DATE: March 10-14, 1980

* INSPECTION REPORT NO: 80-05

SUMMARY

INSPECTION SUMMARY

* Inspection on March 10-14, (80-05): Included a review of Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys, and Combinations; Records and Reports; Followup on Previous Items of Noncompliance/Deviations; Followup on Unresolved Items; and Followup on IE Bulletin No. 79-16. The inspection involved 80 inspector hours onsite by two NRC inspectors. The inspection began during day shift period; 14 inspection hours were accomplished during offshift periods. The licensee was found to be in compliance with NRC requirements within the 23 areas examined during this inspection except for the following three items: Access Control (Identification, Authorization, and Badging) - The licensee failed to conduct proper screening in accordance with security plans commitments; Physical Barriers (Vital Areas) - A vital area barrier was found to be degraded; and Access Control (Identification, Authorization, and Badging) - The licensee failed to implement adequate badge control. The items of noncompliance from the previous security inspection IE Report No. 50-315/79-19; 50-316/79-15 were closed. One unresolved item identified in that inspection remains open.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-04/ 03L-0	03/11/80	04/08/80	While performing a scan sequence one of the two detectors in use for APDMS became inoperable and could not complete its scan.
80-05/ 03L-0	03/21/80	04/18/80	On 3/21/80, it was discovered that the Unit 1 APDMS and P-250 APDMS limits, installed since the previous surveillance were incorrect.
80-06/ 03L-0	03/24/80	04/18/80	During the performance of a surveillance test on the Unit 1 650 foot elevation airlock door a leakage of 130 CFM was found.

SUMMARY

INSPECTION SUMMARY

+ Inspection on March 10-14, (80-04): Included a review of Security Plan;
Security Program Audit; Security Organization; Protected Area Physical
Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identi-
fication, Authorization and Badging); Access Control (Search); Access
Control (Escorting); Access Control (Vital Areas); Alarm Stations;
Detection Aids; Assessment Aids; Communications; Testing and Maintenance;
Compensatory Measures; Power Supply; Response; Locks, Keys, and
Combinations; Records and Reports; Followup on Previous Items of Noncompli-
ance/Deviations; Followup on Unresolved Items; and Followup on IE Bulletin
No. 79-16. The inspection involved 80 inspector hours onsite by two NRC
inspectors. The inspection began during day shift period; 14 inspection
hours were accomplished during offshift periods. The licensee was found
to be in compliance with NRC requirements within the 23 areas examined
during this inspection except for the following three items: Access
Control (Identification, Authorization, and Badging) - The licensee failed
to conduct proper screening in accordance with security plans commitments;
Physical Barriers (Vital Areas) - A vital area barrier was found to be
degraded; and Access Control (Identification, Authorization, and Badging) -
The licensee failed to implement adequate badge control. The items of
noncompliance from the previous security inspection IE Report No. 50-315/
79-19; 50-316/79-15 were closed. One unresolved item identified in that
inspection remains open.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-12/ 03L-0	03/05/80	03/25/80	A steam generator water level-low-low reactor trip bistable was found to trip at a value corresponding to 11:05% narrow range instrument span.
80-13/ 03L-0	03/07/80	04/02/80	During normal operation, the circuit breaker for the R-11 and R-12 sample pump tripped.
80-14/ 03L-0	02/16/80	04/02/80	During a surveillance test, the proximity switch for "D" main turbine stop valve fell off of the mounting bracket.
80-15/ 03L-0	03/25/80	04/15/80	During an operational retest of the turbine driven auxiliary feed pump, aux feed valve FMO-221 for No. 2 steam generator did not operate.
80-16/ 03L-0	03/22/80	04/18/80	Control room operator discovered the breaker for IMO-310 open.
80-17/ 03L-0	03/21/80	04/18/80	During normal operation, the TDAFP trip and throttle valve tripped and could not be reset.

INSPECTION REPORT NO: 50-298/80-04

SUMMARY

INSPECTION SUMMARY

INSPECTION CONDUCTED MARCH 17-20, 1980 (80-03): FACILITY ORGANIZATION AND OPERATION, MEASUREMENTS AND CONTROLS, INVENTORY AND INVENTORY VERIFICATION, SHIPPING AND RECEIVING, STORAGE AND INTERNAL CONTROLS, RECORDS AND REPORTS AND MANAGEMENT OF MATERIAL CONTROL SYSTEM. THE INSPECTION INVOLVED 38 INSPECTION HOURS ONSITE BY TWO NRC INSPECTORS AND WAS BEGUN DURING THE REGULAR HOURS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS IN THE 7 AREAS EXAMINED DURING THE INSPECTION.

INSPECTION CONDUCTED MARCH 17-20, 1980 (80-03): INCLUDED REVIEW OF SECURITY PLAN; SECURITY ORGANIZATION; PHYSICAL BARRIERS (PROTECTED AREA); PHYSICAL BARRIERS (VITAL AREAS); ACCESS CONTROL (SEARCH); ACCESS CONTROL (ESCORTING); ALARM STATION; COMMUNICATIONS, ASSESSMENT AIDS; COMPENSATORY MEASURES; POWER SUPPLY; RECORDS AND REPORTS. THE INSPECTION INVOLVED 62 INSPECTOR HOURS ONSITE BY TWO NRC INSPECTORS. THE INSPECTION WAS BEGUN DURING A REGULAR SHIFT WITH TWO INSPECTOR HOURS BEING ACCOMPLISHED OFFSITE AND SIX INSPECTOR HOURS WERE COMPLETED DURING OFFSHIFT PERIODS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE 12 AREAS EXAMINED DURING THE INSPECTION.

INSPECTION ON MARCH 11-13, AND 24-27, 1980 (80-04): ROUTINE, ANNOUNCED INSPECTION OF QUALITY ASSURANCE PROGRAM; GENERAL ELECTRIC TYPE SBM CONTROL SWITCH PROBLEM, AND A REVIEW OF REFUELING OUTAGE ACTIVITIES. THE INSPECTION INVOLVED SIXTY-SIX (66) INSPECTOR-HOURS ONSITE BY TWO INSPECTORS. OF THE FOUR (4) AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE NOTED IN ANY AREA.

22.	License Number/Date of Issue	DPR-72, 12/3/76
23.	Public Document Room	Crystal River Public Library 668 N.W. First Crystal River, Florida 32639

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY FLORIDA POWER CORPORATION'S APPROVED QUALITY ASSURANCE PROGRAM, HOUSEKEEPING REQUIREMENTS WERE ESTABLISHED IN ACCORDANCE WITH REGULATORY GUIDE 1.39-1976 AND ANSI N45.2.3-1973. IMPLEMENTING INSTRUCTIONS PERTAINING TO CRYSTAL RIVER 3 ARE CONTAINED IN ADMINISTRATIVE INSTRUCTION AI-1000. ON DECEMBER 12, 1979, IT WAS OBSERVED THAT ESTABLISHED HOUSEKEEPING REQUIREMENTS HAD NOT BEEN ADHERED TO, IN THAT, EXCESSIVE AMOUNTS OF PLASTIC, CARDBOARD, WOOD, PIPING AND FITTINGS, AND GENERAL DEBRIS HAD BEEN ALLOWED TO ACCUMULATE WITHIN THE AUXILIARY BUILDING CREATING A POTENTIAL FIRE AND INDUSTRIAL SAFETY HAZARD.
(7955 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.3 TEMPORARY CHANGES TO PROCEDURES MAY BE MADE PROVIDED THE INTENT OF THE ORIGINAL PROCEDURE IS NOT ALTERED. ON MARCH 26, 1980, A TEMPORARY CHANGE TO OP 414 LEV. 5 "NITROGEN AND HYDROGEN SYSTEM" WAS USED TO SUPPLY HELIUM TO "B" STEAM GENERATOR WHICH WAS NOT IN THE ORIGINAL PROCEDURE.
(8013 DEFICIENCY)

CONTRARY TO THE REQUIREMENTS OF TECHNICAL SPECIFICATION 6.8.1.E, AS IMPLEMENTED BY EMERGENCY PROCEDURES EM-206 AND EM-207, THE LICENSEE DID NOT: (1) NOTIFY THE STATE OF FLORIDA OF A CLASS B EMERGENCY VIA NAWAS, AND (2) DID NOT MAINTAIN THE PHONE NUMBER OF THE PLANT MANAGER IN THE CONTROL ROOM COPY OF EM-206.
(8014 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1, PROCEDURES REFERENCED IN REG. GUIDE 1.33 (1972), APPENDIX A, MUST BE FOLLOWED. SECTION G.5.D OF REG. GUIDE 1.33 (1972), APPENDIX A, LISTS PROTECTIVE CLOTHING AS AN AREA WHERE PROCEDURES ARE NEEDED. FACILITY RADIATION PROTECTION PROCEDURE RP-101, RADIATION PROTECTION MANUAL INCLUDES PROCEDURES FOR USE AND REUSE OF PROTECTIVE CLOTHING. SECTION 4.9 OF RP-101 STATES LAUNDERED PROTECTIVE CLOTHING IS ACCEPTABLE FOR REUSE IF SURVEY READINGS INDICATE A RADIATION LEVEL BELOW 1500 COUNTS PER MINUTE AS MEASURED WITH A SIDE WINDOW G-M TUBE. ON MARCH 13, 1980, SEVERAL DOZEN SETS OF LAUNDERED COVERALLS WERE FOUND WITH RADIOACTIVITY IN EXCESS OF THE ABOVE LIMITS. MEASUREMENTS INDICATED RADIATION LEVELS AS HIGH AS 7 MREM/HR, CORRESPONDING TO AN ESTIMATED 7000 TO 10000 COUNTS PER MINUTE.
(8015 INFRACTION)

SUMMARY

INSPECTION SUMMARY

INSPECTION JANUARY 7-10 (80-01): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 64 INSPECTOR HOURS ON SITE IN THE AREAS OF REVIEW OF OPERATIONS, IE BULLETIN FOLLOWUP AND A TOUR OF THE FACILITY AND CORPORATE HEADQUARTERS. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 17-21 (80-12): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 40 RESIDENT INSPECTOR HOURS ON SITE IN THE AREAS OF OPERATIONS, PLANT TOURS AND OBSERVATION OF WORK. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 21-28 (80-13): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 44 INSPECTOR-HOURS ON SITE IN THE AREAS OF FUEL RECEIPT AND INSPECTION AND OUTAGE MAINTENANCE. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY, PROCESSING AN IMPROPER PROCEDURE CHANGE).

+ INSPECTION MARCH 18-21 (80-15): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 39 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIATION PROTECTION INCLUDING TRAINING, OUTAGE PREPARATIONS EXPOSURE CONTROL, PROCEDURES, RESPIRATORY PROTECTION, POSTING AND LABELING, AND PREVIOUSLY IDENTIFIED ITEMS. OF THE SEVEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SIX AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - CONTAMINATION OF PROTECTIVE CLOTHING, READY FOR USE, IN EXCESS OF PROCEDURAL LIMITS).

INSPECTION MARCH 10-14 (80-16): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 32 INSPECTOR-HOURS ON SITE IN THE AREAS OF NON NUCLEAR INSTRUMENTATION SYSTEM COMPONENT ALIGNMENT, AND PROCEDURES. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 19-21 AND 25-28 (80-17): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 43 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSERVICE INSPECTION (ISI) - PROGRAM REVIEW, PROCEDURE REVIEW, WORK OBSERVATION AND DATA EVALUATION; IE BULLETIN 79-17; UT INSPECTION OF STEAM TURBINE DISCS; ONCE THRU STEAM GENERATOR (OSTG) TUBE TO TUBE SHEET WELD REPAIR PROGRAM. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

FAILURE TO ADEQUATELY FOLLOW LOGGING PROCEDURES AS REQUIRED IN SECURITY PLAN.
(8002 DEFICIENCY)

FAILURE TO CONDUCT SEARCHES AS REQUIRED BY SECURITY PLAN.
(8002 DEFICIENCY)

FAILURE TO ADEQUATELY AND EFFECTIVELY CONTROL ACCESS IN ACCORDANCE WITH SECURITY PLAN REQUIREMENTS.
(8002 INFRACTION)

FAILURE OF THE ALARM STATIONS TO HAVE ADEQUATE ALARM MONITORING CAPABILITIES.
(8002 INFRACTION)

AN INSPECTOR WAS ABLE TO CIRCUMVENT INTRUSION DETECTION SENSORS IN CERTAIN AREAS.
(8002 DEFICIENCY)

FAILURE TO PROVIDE AN ALARM SUBSYSTEM IN ACCORDANCE WITH A SECURITY PLAN COMMITMENT.
(8002 DEFICIENCY)

A PORTION OF THE ACTIVE INTRUSION DETECTION ALARM SYSTEM IS NOT TAMPER-INDICATING.
(8002 INFRACTION)

SEVERAL REDUNDANT SECURITY COMMUNICATION SYSTEMS WERE NOT PROPERLY SECURED.
(8002 DEFICIENCY)

THE LICENSEE FAILED TO CONDUCT PROPER TESTS OF SPECIAL PURPOSE DETECTORS.
(8002 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS

+ Completion in December 1979 of the increased fuel pool storage capacity from 260 fuel assembly positions to 735 positions. (80-08)

MANAGERIAL ITEMS

+ As a result of the February 29, 1980 Management Meeting, an Order to Modify the Licensee was issued March 5, 1980. The order required the licensee to take immediate and long term action to increase the qualifications of non-licensed equipment operation assigned to the operating shifts. (80-07)

PLANT STATUS

+ The unit tripped on April 7, 1980 due to partial loss of condenser vacuum. On April 8 the unit was taken to cold shutdown in preparation for the refueling outage scheduled to start April 11. On April 19 while in the refueling mode, decay heat removal was lost for approximately 2 1/2 hours due to inadvertent tripping of a 13.8KV bus breaker. Fuel movement is scheduled to start early part of May. The refueling and maintenance outage is currently scheduled to be 12 weeks long.

+LAST IE SITE INSPECTION DATE: March 5-24, 1980

+ INSPECTION REPORT NO: 80-09

80-20/ 03L-0	03/06/80	04/03/80	No control room indication for containment vacuum relief isolation valve.
80-21/ 03L-0	03/13/80	04/10/80	Diesel fire protection pump control problems.
80-22/ 03L-0	03/17/80	04/15/80	Control room position indication for containment analyzer discharge line valve lost.

SUMMARY

INSPECTION SUMMARY

+ Inspection on February 14-15 and March 13, (80-03): Spent Fuel Rack QA/QC programs and implementing welding and nondestructive examinations (NDE) procedures and record review; IE Bulletin 79-13 and IE Bulletin 79-17 activities. The inspection involved 20 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

+ Inspection on March 10-12, (80-04): A routine announced inspection of fire protection program items from IE Inspection Report 50-346/79-15. The inspection involved 16 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

+ Inspection on February 4-8, 11, 15, 19-22, 25-28 and March 3-7, (80-05): Routine unannounced inspection of followup on previous inspection findings, plant operations, physical protection (security organization, physical barriers, access control, communications) followup of licensee event reports, reactor trip on February 5, 1980, the receipt of new fuel and TMI-2 lesson learned followup. The inspection involved 147.5 inspector hours onsite by two NRC inspectors. No items of noncompliance or deviations were identified.

+ Meeting February 29, (80-07): An announced meeting was held with corporate and site management to discuss current operating shift staffing concerns and results of a security inspection. The meeting lasted approximately 3 1/2 hours and NRC representatives included IE Headquarters and Region III personnel. The licensee committed to immediate implementation of three short term actions to strengthen the experience level of non-licensed personnel on the five operating shifts until the reactor is shutdown for the scheduled refueling outage. For the long term the licensee was committed to meet the operating shift staffing requirements of the December 1979 draft of ANS 3.1 Standard prior to returning the reactor to operation from the refueling outage. An Order to Modify the Licensee was issued on March 5, 1980 to confirm these commitments. No items of noncompliance or deviations were identified within the scope of this meeting.

+ Inspection on March 26-28, (80-08): Facility organization and operation measurements and controls, inventory and inventory verifications, shipping and receiving, storage and internal controls, records and reports and management of material control system. The inspection involved 36 inspector hours onsite by two NRC inspectors and was begun during the regular hours. The licensee was found to be in compliance with NRC requirements in the seven areas examined during the inspections except for the following one item (failure to perform an independent fuel management audit for calendar year 1978).

+ Inspection on March 5-24, (80-09): A special announced inspection to verify the licensee compliance with Item 1 a, b, and c of an Order to Modify the Licensee issued March 5, 1980 to upgrade the experience level of non-licensed members of the operating shifts. The inspection involved 30 inspector hours onsite by the resident inspector. No items of noncompliance or deviations were identified.

MANAGERIAL ITEMS

+ Mr. Byron Lee, Jr. was promoted to Executive Vice President and Mr. Cordell Reed, Vice President, of Commonwealth Edison Company effective February 1, 1980. (80-04)

PLANT STATUS

Unit 1 shutdown on October 31, 1978 for an extended outage to upgrade ECCS, chemical cleaning and refueling. Outage expected to last a minimum of 32 months.

+LAST IE SITE INSPECTION DATE: March 3 through April 4, 1980

+ INSPECTION REPORT NO: 80-07

SUMMARY

INSPECTION SUMMARY

+ Inspection on February 20-22 and 26, (80-04): Routine, announced inspection of Emergency Planning including internal audits; licensee coordination with offsite support agencies; and review of emergency drills; Confirmatory Measurements, including the licensee's program for quality control of nonradiological analytical measurements; evaluation of the licensee's analytical results of plant effluent samples obtained during a previous inspection; and collection of plant effluent samples for future comparative analysis; and Environmental Protection, including review of the radiological and nonradiological environmental monitoring program for 1978. The inspection involved 42 inspector hours onsite by two NRC inspectors. Of the seven areas inspected, no apparent items of noncompliance or deviations were identified in six areas; two apparent items of noncompliance were identified in one area (failure to collect and analyze fish for gamma isotopic for the first half of 1978; and failure to report analytical results of fish collected during the second half of 1978 in the Annual Report for 1978).

+ Inspection on February 27-28, (80-05): Licensee actions relative to IE Bulletin 79-14 including general discussion on NRC requirements, work procedure review and review of analysis and calculations. The inspection involved 12 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

+ Inspection on February 4-29, (80-06): Routine, unannounced resident inspection of plant operations; physical protection-security organization, physical barriers, access control (identification, authorization, badging, search, and escorting), and communications; and refueling activities. The inspection involved 138 inspector hours onsite by two NRC inspectors. No items of noncompliance were identified.

+ Inspection on March 3 through April 4, (80-07): Routine, unannounced resident inspection consisting of monthly surveillance observation, operational safety verification, and monthly maintenance observation. The inspection involved 123 inspector hours onsite by two NRC inspectors. Of the three areas inspected, there were no items of noncompliance identified.

PLANT STATUS

Unit operating routinely.

+LAST IE SITE INSPECTION DATE: March 3 through April 4, 1980

+ INSPECTION REPORT NO: 80-07

SUMMARY

INSPECTION SUMMARY

+ Inspection on February 20-22 and 26, (80-04): Routine, announced inspection of Emergency Planning including internal audits; licensee coordination with offsite support agencies; and review of emergency drills; Confirmatory Measurements, including the licensee's program for quality control of nonradiological analytical measurements; evaluation of the licensee's analytical results of plant effluent samples obtained during a previous inspection; and collection of plant effluent samples for future comparative analysis; and Environmental Protection, including review of the radiological and nonradiological environmental monitoring program for 1978. The inspection involved 42 inspector hours onsite by two NRC inspectors. Of the seven areas inspected, no apparent items of noncompliance or deviations were identified in six areas; two apparent items of noncompliance were identified in one area (failure to collect and analyze fish for gamma isotopic for the first half of 1978; and failure to report analytical results of fish collected during the second half of 1978 in the Annual Report for 1978).

+ Inspection on February 27-28, (80-05): Licensee actions relative to IE Bulletin 79-14 including general discussion on NRC requirements, work procedure review and review of analysis and calculations. The inspection involved 12 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

+ Inspection on February 4-29, (80-06): Routine, unannounced resident inspection cf plant operations: physical protection-security organization, physical barriers, access control (identification, authorization, badging, search, and escorting), and communications; and refueling activities. The inspection involved 138 inspector hours onsite by two NRC inspectors. No items of noncompliance were identified.

+ Inspection on March 3 through April 4, (80-07): Routine, unannounced resident inspection consisting of monthly surveillance observation, operational safety verification, and monthly maintenance observation. The inspection involved 123 inspector hours onsite by two NRC inspectors. Of the three areas inspected, there were no items of noncompliance identified in two areas. There was one item of noncompliance (failure to follow radiation protection procedures) identified in one area.

- INSPECTION REPORT NO: 80-10

SUMMARY

INSPECTION SUMMARY

- Inspection on February 20-22 and 26, (80-04): Routine, announced inspection of Emergency Planning including internal audits; licensee coordination with offsite support agencies; and review of emergency drills; Confirmatory Measurements, including the licensee's program for quality control of nonradiological analytical measurements; evaluation of the licensee's analytical results of plant effluent samples obtained during a previous inspection; and collection of plant effluent samples for future comparative analysis; and Environmental Protection, including review of the radiological and nonradiological environmental monitoring program for 1978. The inspection involved 42 inspector hours onsite by two NRC inspectors. Of the seven areas inspected, no apparent items of noncompliance or deviations were identified in six areas; two apparent items of noncompliance were identified in one area (failure to collect and analyze fish for gamma isotopic for the first half of 1978; and failure to report analytical results of fish collected during the second half of 1978 in the Annual Report for 1978).
- Inspection on February 27-28, (80-05): Licensee actions relative to IE Bulletin 79-14 including general discussion on NRC requirements, work procedure review and review of analysis and calculations. The inspection involved 12 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.
- Inspection on February 21-22 and 27-29, (80-06): Inservice, NDE examination. Review of examination program, review of examination procedures, observation of examination activites, review of examination records. The inspection involved 48 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.
- Inspection on February 4-29, (80-07): Routine, unannounced resident inspection of plant operations; physical protection-security organization, physical barriers, access control (identification, authorization, badging, search, and escorting), and communications; and refueling activities. The inspection involved 138 inspector hours onsite by two NRC inspectors. No items of noncompliance were identified.
- Inspection on March 14 and 18, (80-08): Jet pump hold down beam ultrasonic examination (UT) procedure, calibration, and record review. The inspection involved eight inspecter hours onsite by two NRC inspectors. No items of noncompliance or deviations were identified.
- Inspection on March 3 through April 4, (80-10): Routine, unannounced resident inspection consisting of monthly surveillance observation, operational safety verification, and monthly maintenance observation. The inspection involved 123 inspecter hours onsite by two NRC inspectors. Of the three areas inspected, there were no items of noncompliance identified in two areas. There was one item of noncompliance (failure to follow radiation protection procedures) identified in one area.

FACILITY ITEMS

- The licensee has purchased a chair-type whole body counter for routine use. The rental supine-type counter has been returned to the contractor. (80-01)

PLANT STATUS

- The unit was returned to service on April 17, 1980 following the scheduled refueling outage.

+LAST IE SITE INSPECTION DATE: March 18-19, 1980

- INSPECTION REPORT NO: 80-05

SUMMARY

INSPECTION SUMMARY

- Inspection on February 20-22, (80-01): Routine, unannounced inspection of operational radiation protection program during refueling and major main- tenance, including: qualifications; training; planning and preparation; exposure control; posting, labeling, and control; surveys; and ALARA. The inspection involved 48 inspector hours onsite by two NRC inspectors. No items of noncompliance or deviations were identified.

- Inspection on February 12-19 and March 5-7, (80-02): Review of ISI program, procedures, personnel and equipment certifications, observation of work activities, and review of NDE examination documentation. The inspection involved 72 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

- Inspection on February 19-22, (80-03): Routine, unannounced inspection of: Pre-refueling activities; Refueling activities; General Employee Training; Requalification Training; and LER followup. The inspection involved 53 inspector hours (including 4 hours off-shift) onsite by two NRC inspectors. Of the areas inspected, three items of noncompliance (failure to conduct fire brigade training; inadequate procedure; and failure to conduct monthly fire extinguisher inspections) were identified.

- Inspection on March 18-21, (80-04): Routine, unannounced inspection of refueling maintenance activities. Also follow-up on unplanned release of radioactive material from the site. The inspection involved 29 inspector hours onsite by two NRC inspectors and four inspector hours at the corporate office by one NRC inspector. Of the areas inspected, two items of noncompliance (failure to review and approve temporary procedure changes; and failure to take prompt corrective action on items identified during QC inspections) were identified.

- Inspection on March 18-19, (80-05): Nonroutine, announced special inspection of circumstances concerning an unplanned release of radioactive effluent to an unrestricted area. The inspection involved 21 inspector hours onsite by two NRC inspectors. Two items of noncompliance were identified: 10 CFR 50.72, failure to notify NRC within required time after an unplanned release; Technical Specification 3.3.1.B.2, failure to evaluate sample effluent prior to release.

+ INSPECTION REPORT NO: 50-348/80-10

SUMMARY

INSPECTION SUMMARY

INSPECTION MARCH 25-26 (80-4): THIS ROUTINE ANNOUNCED INSPECTION INVOLVED 14 INSPECTOR-HOURS ON SITE IN THE AREAS OF PIPE SUPPORT BASEPLATE DESIGNS USING CONCRETE EXPANSION ANCHOR BOLTS (IEB 79-02); AND SEISMIC ANALYSIS FOR AS-BUILT SAFETY RELATED PIPING SYSTEMS (IEB 79-14). OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 5-7 (80-06): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 20 INSPECTOR-HOURS ON SITE IN THE AREA OF MAINTENANCE. OF THE ONE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 4-29 (80-07): THIS ROUTINE INSPECTION INVOLVED 67 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, AND PLANT SECURITY. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 11-14 (80-08): THIS INSPECTION INVOLVED 20 INSPECTOR HOURS ON SITE BY ONE NRC INSPECTOR IN THE AREAS OF REVIEW OF SECURITY ORGANIZATION; LIGHTING; ACCESS CONTROL (IDENTIFICATION, AUTHORIZATION AND BADGING); DETECTION AIDS; LOCKS/KEYS; RECORDS/REPORTS; AND FOLLOWUP ON PREVIOUS ENFORCEMENT MATTERS. OF THE SIX AREAS EXAMINED DURING THE INSPECTION, ONE UNRESOLVED ITEM WAS IDENTIFIED (ACCESS CONTROL - PACKAGES HAND-CARRIED INTO THE PROTECTED AREA BY SECURITY FORCE MEMBERS WERE NOT SEARCHED AT THE ACCESS CONTROL POINT).

+ INSPECTION MARCH 28 (80-11): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 104 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATION, AND PLANT SECURITY. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
80-07/ 03L-0	02/02/80	02/29/80	30 DAY LER	B TRAIN SERVICE WATER DECLARED INOPERABLE WHEN PUMP WOULD NOT AUTO START DURING LOSS OF SITE POWER TEST. CAUSE WAS IMPROPER INSTALLING OF TEST EQUIPMENT.
80-09/ 03L-0	02/01/80	02/29/80	30 DAY LER	OUTPUT BREAKER FOR DIESEL GENERATOR 1B FAILED TO CLOSE AUTOMATICALLY DURING LOSS OF OFFSITE POWER TEST.CAUSE WAS A MISALIGNED SWITCH AT BREAKER PANEL.
80-10/ 03L-0	02/01/80	02/29/80	30 DAY LER	MOTOR DRIVEN AUX FEEDWATER TRAIN A INOPERABLE WHEN VALVES DID NOT OPEN ON AUTO START ON LOSS OF SITE POWER TEST.CAUSE WAS A MISPOSITIONED SWITCH AT BREAKER PANEL.
80-11/ 03L-0	02/02/80	02/29/80	30 DAY LER	CONTAINMENT ISOLATION VALVE SW FOR RCP AIR COOLER FAILED TO FULLY CLOSE DURING A SURVEILLANCE TEST, AND DECLARED INOPERABLE.CAUSE WAS THERMAL OVERLOAD SIZED MARGINALLY.
80-12/ 03L-0	02/01/80	02/29/80	30 DAY LER	COMPONENT COOLING WATER PUMP 1B FAILED TO AUTO-START DURING A LOSS OFFSITE POWER TEST, AND DECLARED INOPERABLE. CAUSE DUE PUMP 1C SWITCH MISPOSITIONED.
80-13/ 03L-0	02/02/80	02/29/80	30 DAY LER	CONTAINMENT ISOLATION VALVE (CCW TO EXCESS LETDOWN/ RCDT HEAT EXCHANGER) DID NOT FULLY CLOSE DURING TEST.
80-14/ 03L-0	02/14/80	02/29/80	14 DAY LER	FAILURE OF MOTORDRIVEN AUXFEEDWATER PUMPS TO START ON LOSS OF BOTH MAIN FEEDWATER PUMPS DUE TO INCORRECT INSTALLATION OF BYPASS SWITCHES.
80-15/ 03L-0	02/17/80	03/14/80	30 DAY LER	DEH SYSTEM FAILED CAUSING A LOAD INCREASE WHICH RESULTED IN TAVG DECREASING TO 539 DEGREES F.TAVG WAS RESTORED ABOVE 541 DEGREES F WITHIN 2 MINS,VENDOR CHECK IN PROGRESS.
80-16/ 03L-0	02/15/80	03/14/80	30 DAY LER	THE TURBINE DRIVEN AUXILIARY FEEDWATER PUMP THRUST BEARING OVERHEATED BECAUSE THE BEARING OILER WAS POSITIONED TOO HIGH. OILER ASSEMBLY REPOSITIONED – TEST SATISFACTORY.
80-17/ 03L-0	02/22/80	03/14/80	30 DAY LER	TURBINE DRIVEN AUXILIARY FEEDWATER PUMP TRIPPED ON OVERSPEED WHEN OUT OF ADJUSTMENT LIMIT-SWITCH ALLOWED GOVERNER VALVES FULL OPEN BEFORE STEAM SUPPLY–SWITCH ADJUSTED.
80-18/ 03L-0	02/29/80	03/21/80	30 DAY LER	PRESSURIZER PRESSURE CHANNEL, PT-457, INOPERABLE WHEN TRIP SETPOINT REQUIREMENTS NOT MET.DIRTY GAIN POT IN LEAD/LAG CIRCUIT. ITEM CLEANED.
80-19/ 03L-0	02/29/80	03/21/80	30 DAY LER	CONTROL ROOM EMERGENCY VENTILATION TRAIN B INOPERABLE WHEN RECIRCULATION FAN 1B WOULD NOT START BECAUSE OF A SHORTED ALARM RELAY COIL AND BLOWN FUSE - BOTH REPLACED.

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- The offgas system recombiner was out of service, resulting in higher than normal stack releases.

MANAGERIAL ITEMS:

- The position of Superintendent of Power was filled on April 18, 1980 by the Maintenance Supervisor.

PLANT STATUS:

- Shutdown for a 65-day refueling outage. The facility had been scheduled to shutdown on 5/9. However, a unit scram occurred on 5/6 due to an EHC system problem and it was decided to commence the refueling outage at that time. Representative stack and offgas release rates were 2,000 and 8,000 microcuries per second respectively.

- LAST IE SITE INSPECTION DATE: 4/25/80

- INSPECTION REPORT NO: 50-333/80-06

SUMMARY

INSPECTION SUMMARY

- 50-333/80-02 - Mar 3-14: Routine, unannounced inspection of plant operations, licensee action on SBLOCA procedure and training implementation, Licensee Event Reports (LERs), licensee action on IE Circulars, and licensee action on previous inspection findings. This report also documents inspector attendance at the TMI Lessons Learned meeting held on March 13, inspector attendance at the March 5 meeting to discuss details related to establishment of an on-site office for a full-time NRC inspector at the facility, and the in-office review of LERs, monthly operating reports, and the 10 CFR 50.59 report for 1979. The inspection began at 5:00 p.m. on Sunday, March 2, and involved 87.5 hours onsite by one region-based NRC inspector. Noncompliances: One (failure to properly search a non-regular licensee employee).

- 50-333/80-04 - Mar 31 - Apr 4: Routine, unannounced inspection of plant operations as part of a turnover of NRC Principal/Resident Inspectors, licensee progress on pipe hanger installations and modifications and licensee action on previous inspection items. This inspection also included an independent review of the instrumentation required to be environmentally qualified in accordance with IE Bulletin 79-01B. The inspection involved 91.5 hours onsite by two region-based inspectors and one resident inspector trainee and 10 hours onsite by one Reactor Projects Section Chief. Noncompliances: None.

SYSTEMS AND COMPONENT PROBLEMS:

Areas related to potential equipment modification, which are under review and discussion with the NRC include: helium circulator auxiliaries; accident analysis relating to outlet temperature dispersion and orifice settings; hangers for 2" and smaller piping; and plant oscillations.

FACILITY ITEMS (PLANS AND PROCEDURES):

IMPLEMENTATION OF 10 CFR 73.55 PROVISIONS WERE IN EFFECT 3/21/80.

PLANT STATUS:

POWER LEVEL ≥ 45% WITH REACTOR OUTLET TEMPERATURE LESS THAN 1200 DEG F, WHILE ATTEMPTING TO LOCATE SOURCE OF OXIDANTS WHICH ARE RESTRICTING OPERATION TO AN OUTLET TEMPERATURE LESS THAN 1200 DEG F.

LAST IE SITE INSPECTION DATE: APRIL 2 - 3, 1980

INSPECTION REPORT NO: 50-267/80-07

SUMMARY

INSPECTION SUMMARY

INSPECTION MARCH 3, 1980 - MARCH 28, 1980 (80-06): ROUTINE, ANNOUNCED INSPECTION OF REVIEW OF EVENT REPORTS; SURVEILLANCE; MAINTENANCE; OPERATIONAL SAFETY VERIFICATION; REVIEW OF BULLETINS/CIRCULARS; AND REPORT REVIEWS. WITHIN THE SIX (6) AREAS INSPECTED, TWO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED (INFRACTION - FAILURE TO MEET TECHNICAL SPECIFICATION REQUIREMENTS FOR CORE REGIONAL TEMPERATURE RISE; INFRACTION - FAILURE TO FOLLOW PROCEDURES).

INSPECTION APRIL 2-3, 1980 (80-07): ROUTINE, UNANNOUNCED INSPECTION OF SECURITY PLAN AND DETECTION AIDS. WITHIN THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

NRC POWER RESTRICTIONS: Restricted to 70% of Licensed Thermal Power.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-10 03L-0	3/13/80	4/2/80	"A" EMERGENCY DIESEL GENERATOR WOULD NOT LOAD PROPERLY. DEGRADED MODE OF LCO 4.6.1(D)

80-06	04/08/80	F	30.0	A	3				TURBINE GENERATOR TRIPPED DURING A LOOP 1 SHUTDOWN DUE TO INSTRUMENT PROBLEMS.
80-07	04/17/80	F	.8	F	5				REDUCED POWER DUE TO PRIMARY COOLANT MOISTURE AND ADMINISTRATIVE CONTROLS.
80-08	04/18/80	F	.7	A	3				SPURIOUS TRIP WHILE CHANGING INSTRUMENT MODULES.
80-09	04/18/80	F	118.7	A	3				TURBINE TRIPPED DURING A LOOP 1 SHUTDOWN DUE TO BUFFER-MID-BUFFER PROBLEM ON "A" PRIMARY COOLANT CIRCULATOR.
80-10	04/25/80	F	5.9	A	1				TURBINE TAKEN OFF LINE TO RECOVER FROM A LOOP SHUTDOWN.
80-11	04/30/80	F	12.4	A	1				TURBINE TAKEN OFF LINE TO RECOVER FROM A LOOP SHUTDOWN.

SUMMARY

THE UNIT OPERATED UNDER AN NRC RESTRICTION TO 231 NET MWE (70% POWER) PENDING RESOLUTION OF TEMPERATURE FLUCTUATIONS. ON 04/08/80 AND 04/18/80 THE TURBINE TRIPPED DUE TO INSTRUMENT PROBLEMS DURING A LOOP 1 SHUTDOWN: A SPURIOUS TRIP ALSO OCCURRED ON 04/18/80 WHILE CHANGING INSTRUMENT MODULES. THE TURBINE WAS TAKEN OFF LINE ON 04/25/80 AND 04/30/80 TO RECOVER FROM THE LOOP SHUTDOWN. A BRIEF LOAD REDUCTION OCCURRED ON 04/17/80 DUE TO PRIMARY COOLANT MOISTURE AND ADMINISTRATIVE CONTROLS.

- INSPECTION REPORT NO: 50-244/80-05

SUMMARY

INSPECTION SUMMARY

- 50-244/80-02 - Feb 19-22: Routine, unannounced inspection (29 hours onsite) by a region-based inspector of action on previous inspection findings; administrative control of safety-related equipment required by Technical Specifications; calibrations required by Technical Specifications of components and equipment associated with safety-related systems and/or functions; calibration and control of test equipment; witnessing of calibrations; technician qualifications; and control room tour. Noncompliances: One (failure to record required data; acceptance of out of tolerance setpoint; and inadequate supervisory data review).
- 50-244/80-04 - Mar 3-7: Routine, announced inspection to discuss establishment of an on-site office for a full time NRC inspector at the facility, to turn over the assignment of the principal IE inspector and to review the revised small break loss of coolant emergency procedures including operator training related to these procedures. Noncompliances: None. Deviations: One (failure to meet commitment).

INSPECTION STATUS

ENFORCEMENT STATUS

THE HATCH QUALITY ASSURANCE MANUAL INTRODUCTION IDENTIFIES THAT THE MANUAL WAS WRITTEN SO AS TO ENSURE THE QUALITY ASSURANCE PROGRAM FULLY COMPLIES WITH ANSI N18.7-1976, "ADMINISTRATIVE CONTROLS AND QUALITY ASSURANCE FOR THE OPERATIONAL PHASE OF NUCLEAR POWER PLANTS." ANSI N18.7-1976, SECTION 5.2.2STATES IN PART: "PROCEDURAL STEPS FOR WHICH ACTIONS SHOULD BE COMMITTED TO MEMORY INCLUDE, FOR EXAMPLE, IMMEDIATE ACTIONS IN EMERGENCY PROCEDURES." NUREG-0094, "A GUIDE FOR THE LICENSING OF FACILITY OPERATORS, INCLUDING SENIOR OPERATORS," SECTION IV.F FURTHER STATES THAT THE APPLICANT MUST DEMONSTRATE COMPLETE UNDERSTANDING OF THE SYMPTOMS, AUTOMATIC ACTIONS AND IMMEDIATE ACTION STEPS SPECIFIED BY OFF-NORMAL OR EMERGENCY OPERATING PROCEDURES. ON FEBRUARY 20, 1980, THE INSPECTOR DISCOVERED THAT THE LICENSED PERSONNEL AT PLANT HATCH WERE UNABLE TO CONVEY ALL THE IMMEDIATE OPERATOR ACTIONS SPECIFIED IN THE FACILITY'S EMERGENCY SMALL BREAK LOSS OF COOLANT ACCIDENT PROCEDURES HNP-1902 AND HNP-1904.
(8006 DEVIATION)

AS REQUIRED, IN PART, BY SECTIONS 3.1.2.1.2 AND 3.1.2.1.3 OF APPENDIX B TECHNICAL SPECIFICATIONS, MONITORING PROGRAMS FOR ENTRAINMENT OF ICHTHYOPLANKTON AND IMPINGEMENT OF ORGANISMS, RESPECTIVELY, WERE TO COMMENCE ON JANUARY 2, 1979. THE SUBJECT MONITORING PROGRAMS WERE COMMENCED FEBRUARY 1, 1979, WITHOUT PRIOR NOTIFICATION OF NOR APPROVAL BY THE NRC.
(8012 DEFICIENCY)

PLANT STATUS:

◆ PLANT IS OPERATING AT FULL POWER.

◆ LAST IE SITE INSPECTION DATE: MARCH 31 - APRIL 2, 1980

◆ INSPECTION REPORT NO: 50-321/80-18

SUMMARY

INSPECTION SUMMARY

◆ INSPECTION JANUARY 7-11 (80-03): INCLUDED REVIEW OF SECURITY PLAN; SECURITY PROGRAM AUDIT; SECURITY ORGANIZATION; PHYSICAL BARRIERS (PROTECTED AREA); PHYSICAL BARRIERS (VITAL AREA); LIGHTING; ACCESS CONTROL (VITAL AREA); AND IE BULLETIN 79-16. THE INSPECTION INVOLVED 24 INSPECTOR-HOURS ON SITE. THE INSPECTION WAS BEGUN DURING AN OFFSHIFT PERIOD; 6 INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. DURING THE INSPECTION, AN INSPECTOR ASSISTED AN NRC INVESTIGATOR WHO WAS ON SITE. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE 8 AREAS EXAMINED DURING THE INSPECTION EXCEPT FOR THE FOLLOWING THREE ITEMS: (1) SECURITY ORGANIZATION - FAILURE TO FOLLOW PROCEDURES FOR DOCUMENTING SECURITY INCIDENTS (INFRACTION); (2) PHYSICAL BARRIERS (VITAL AREA) - A VITAL AREA BARRIER DID NOT MEET THE SPECIFICATIONS OF THE LICENSEE'S SECURITY PLAN (INFRACTION); (3) ACCESS CONTROL (VITAL AREA) - FAILURE TO PERFORM VITAL AREA PATROLS AS COMMITTED (INFRACTION).

INSPECTION MARCH 11-14 (80-07): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 13 INSPECTOR-HOURS ON SITE IN THE AREAS OF IE BULLETIN 79-14, "SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS" AND LICENSEE ACTION ON PREVIOUS INSPECTION FINDINGS. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 24-26 (80-09): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 17 INSPECTOR-HOURS ON SITE IN THE AREAS OF IE BULLETIN 79-14, "SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS." AND LICENSEE ACTIONS ON PREVIOUS INSPECTION FINDINGS. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 2 - MARCH 7 (80-11): THIS INSPECTION INVOLVED 56 INSPECTOR-HOURS ON SITE IN THE AREAS OF TECHNICAL SPECIFICATION COMPLIANCE. REPORTABLE OCCURRENCES, HOUSEKEEPING, OPERATOR PERFORMANCE, OVERALL PLANT OPERATIONS, QUALITY ASSURANCE PRACTICES, STATION AND CORPORATE MANAGEMENT PRACTICES, CORRECTIVE AND PREVENTATIVE MAINTENANCE ACTIVITIES, SITE SECURITY PROCEDURES, RADIATION CONTROL ACTIVITIES AND SURVEILLANCE ACTIVITIES. OF THE ELEVEN AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SIX AREAS; SIX ITEMS OF NONCOMPLIANCE WERE FOUND IN FIVE AREAS (INFRACTION - FAILURE TO FOLLOW PROCEDURE; INFRACTION - FAILURE TO OPERATE THE RSCS PROPERLY; INFRACTION - FAILURE TO MAKE IMMEDIATE NOTIFICATION TO THE NRC; INFRACTION - FAILURE TO LIMIT ROD MOTION WITH RSCS INOPERABLE; INFRACTION - FAILURE TO EVALUATE PROCEDURE CHANGE; INFRACTION - FAILURE TO PROVIDE UPDATED PLANT DRAWINGS IN THE CONTROL ROOM).

INSPECTION MARCH 10-19 (80-12): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 33 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIOLOGICAL AND NONRADIOLOGICAL ENVIRONMENTAL PROTECTION INCLUDING MANAGEMENT CONTROLS, REVIEW OF PREVIOUS ENFORCEMENT MATTERS, REVIEW OF ENVIRONMENTAL SURVEILLANCE, REVIEW OF SPECIAL SURVEILLANCE AND STUDY ACTIVITIES, STATUS REVIEW OF LICENSEE EVENT REPORTS, SELECTED SOIL AND GROUNDWATER INDEPENDENT SAMPLING. OF THE SIX AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FIVE AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - ENVIRONMENTAL MONITORING).

INSPECTION MARCH 11-14 AND 25-28 (80-13): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 26 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSERVICE INSPECTION ACTIVITIES (UNIT 2) AND MAINTENANCE WELDING PROGRAM (UNIT 1 AND 2). OF THE 2 AREAS INSPECTED, 2 ITEMS OF NONCOMPLIANCE WERE FOUND IN 2 AREAS (DEFICIENCY - FAILURE TO APPROVE ISI PLAN; AND INFRACTION - FAILURE TO CERTIFY WELDING AND NDE INSPECTORS).

INSPECTION APRIL 2-4 (80-15): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 9 INSPECTOR-HOURS ON SITE IN THE AREA OF INSTALLED EQUIPMENT REVIEW WITH RESPECT TO THE IE BULLETIN 79-01B RESPONSE. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 26-28 (80-16): INCLUDED REVIEW OF LICENSEE COMMITMENTS MADE DURING THE JANUARY 25, 1980 ENFORCEMENT MEETING, PHYSICAL BARRIERS (PROTECTED AREA), PHYSICAL BARRIERS (VITAL AREA), LIGHTING, ACCESS CONTROL (IDENTIFICATION, AUTHORIZATION AND BADGING), ACCESS CONTROL (SEARCH), AND COMMUNICATIONS. THE INSPECTION INVOLVED 15 INSPECTOR-HOURS ON SITE BY 2 NRC INSPECTORS. THE INSPECTION WAS BEGUN DURING AN OFFSHIFT PERIOD; 4 INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE 7 AREAS EXAMINED DURING THE INSPECTION EXCEPT FOR THE FOLLOWING 2 ITEMS: (1) ACCESS CONTROL - FAILURE TO CONTROL ALL POINTS OF PERSONNEL ACCESS INTO VITAL AREAS AND TO VITAL EQUIPMENT (INFRACTION); (2) LIGHTING - FAILURE TO MAINTAIN LIGHTING EQUIPMENT AS COMMITTED TO IN THE SECURITY PLAN (DEFICIENCY); (3) CERTIFICATION OF BULLET RESISTANT STRUCTURES (UNRESOLVED).

INSPECTION MARCH 31 - APRIL 2 (80-18): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 16 INSPECTOR-HOURS ON SITE IN THE AREAS OF FOLLOWUP OF RESIDENT-INSPECTOR IDENTIFIED ITEMS OF NONCOMPLIANCE, UNIT STARTUP OPERATIONS AND POST-MODIFICATION TESTING. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO PERFORM POST-MODIFICATION TESTING).

ENFORCEMENT MEETING APRIL 16 (80-20): DISCUSSED LICENSEE'S ENFORCEMENT HISTORY, OPERATIONAL EVENTS, AND SECURITY ISSUES. GEORGIA POWER COMPANY REPRESENTATIVES ACKNOWLEDGED THE NRC CONCERNS AND INDICATED THAT CORRECTIVE ACTION WOULD BE IMPLEMENTED IN THE AREAS IDENTIFIED.

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

THE HATCH QUALITY ASSURANCE MANUAL INTRODUCTION IDENTIFIES THAT THE MANUAL WAS WRITTEN SO AS TO ENSURE THE QUALITY ASSURANCE PROGRAM FULLY COMPLIES WITH ANSI N18.7-1976, "ADMINISTRATIVE CONTROLS AND QUALITY ASSURANCE FOR THE OPERATIONAL PHASE OF NUCLEAR POWER PLANTS." ANSI N18.7-1976, SECTION 5.2.2STATES IN PART: "PROCEDURAL STEPS FOR WHICH ACTIONS SHOULD BE COMMITTED TO MEMORY INCLUDE, FOR EXAMPLE, IMMEDIATE ACTIONS IN EMERGENCY PROCEDURES." NUREG-0094, "A GUIDE FOR THE LICENSING OF FACILITY OPERATORS, INCLUDING SENIOR OPERATORS," SECTION IV.F FURTHER STATES THAT THE APPLICANT MUST DEMONSTRATE COMPLETE UNDERSTANDING OF THE SYMPTOMS, AUTOMATIC ACTIONS AND IMMEDIATE ACTION STEPS SPECIFIED BY OFF-NORMAL OR EMERGENCY OPERATING PROCEDURES. ON FEBRUARY 28, 1980, THE INSPECTOR DISCOVERED THAT THE LICENSED PERSONNEL AT PLANT HATCH WERE UNABLE TO CONVEY ALL THE IMMEDIATE OPERATOR ACTIONS SPECIFIED IN THE FACILITY'S EMERGENCY SMALL BREAK LOSS OF COOLANT ACCIDENT PROCEDURES HNP-1902 AND HNP-1904.
(8006 DEVIATION)

AS REQUIRED, IN PART, BY SECTIONS 3.1.2.1.2 AND 3.1.2.1.3 OF APPENDIX B TECHNICAL SPECIFICATIONS, MONITORING PROGRAMS FOR ENTRAINMENT OF ICHTHYOPLANKTON AND IMPINGEMENT OF ORGANISMS, RESPECTIVELY, WERE TO COMMENCE ON JANUARY 2, 1979. THE SUBJECT MONITORING PROGRAMS WERE COMMENCED FEBRUARY 1, 1979, WITHOUT PRIOR NOTIFICATION OF NOR APPROVAL BY THE NRC.
(8012 DEFICIENCY)

AS REQUIRED BY CRITERION V OF APPENDIX B TO 10 CFR 50 AND AS IMPLEMENTED BY PARAGRAPH 17.2.5 OF THE FSAR, "ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS, PROCEDURES, DRAWINGS....AND SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THESE INSTRUCTIONS, PROCEDURES, AND DRAWINGS". PARAGRAPH B.1.D(2) OF PLANT PROCEDURE HNP-824, THE APPLICABLE PROCEDURE FOR CONTROL OF SPECIAL PROCESSES, REQUIRES THAT, "PERSONNEL PERFORMING NONDESTRUCTIVE TESTING SHALL BE CERTIFIED IN ACCORDANCE WITH HNP-823 AND SNT-TC-1A". ON MARCH 27, 1980, WELDING RECORDS REVEALED THAT INSPECTION PERSONNEL WHO HAD PERFORMED WELDING AND NDE INSPECTIONS ON AMODIFICATION TO THE CONTROL ROD DRIVE SYSTEM WERE CERTIFIED BY DANIEL CONSTRUCTION COMPANY AND/OR ALABAMA POWER COMPANY IN LIEU OF CERTIFICATION IN ACCORDANCE WITH PLANT PROCEDURE HNP-823 AND THE REQUIREMENTS OF PARAGRAPHS 9 AND 10 OF SNT-TC-1A.
(8013 INFRACTION)

AS REQUIRED BY CRITERION V OF APPENDIX B TO 10 CFR 50 AND AS IMPLEMENTED BY PARAGRAPH 17.2.5 OF THE FSAR, "ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS, PROCEDURES, DRAWINGS....AND SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THESE INSTRUCTIONS, PROCEDURES, AND DRAWINGS". PARAGRAPH F OF PLANT PROCEDURE HNP-904, THE APPLICABLE PROCEDURE FOR ADMINISTRATION OF THE INSERVICE INSPECTION PROGRAM, REQUIRES THAT THE WRITTEN DOCUMENT DETAILING THE PROPOSED WORK TO BE DONE BE REVIEWED AND APPROVED PRIOR TO THE OUTAGE. DURING MARCH 18-21, 1980, INSPECTIONS WERE BEING PERFORMED AND THE PROJECT PLAN DETAILING THE WORK TO BE DONE HAD NOT BEEN APPROVED BY THE LICENSEE.

SUMMARY

INSPECTION SUMMARY

- INSPECTION JANUARY 7-11 (80-03): INCLUDED REVIEW OF SECURITY PLAN; SECURITY PROGRAM AUDIT; SECURITY ORGANIZATION; PHYSICAL BARRIERS (PROTECTED AREA); PHYSICAL BARRIERS (VITAL AREA); LIGHTING; ACCESS CONTROL (VITAL AREA); AND IE BULLETIN 79-16. THE INSPECTION INVOLVED 23 INSPECTOR-HOURS ON SITE. THE INSPECTION WAS BEGUN DURING AN OFFSHIFT PERIOD; 6 INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. DURING THE INSPECTION, AN INSPECTOR ASSISTED AN NRC INVESTIGATOR WHO WAS ON SITE. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE 8 AREAS EXAMINED DURING THE INSPECTION EXCEPT FOR THE FOLLOWING THREE ITEMS: (1) SECURITY ORGANIZATION - FAILURE TO FOLLOW PROCEDURES FOR DOCUMENTING SECURITY INCIDENTS (INFRACTION); (2) PHYSICAL BARRIERS (VITAL AREA) - A VITAL AREA BARRIER DID NOT MEET THE SPECIFICATIONS OF THE LICENSEE'S SECURITY PLAN (INFRACTION); (3) ACCESS CONTROL (VITAL AREA) - FAILURE TO PERFORM VITAL AREA PATROLS AS COMMITTED (INFRACTION).

INSPECTION MARCH 11-14 (80-07): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 13 INSPECTOR-HOURS ON SITE IN THE AREAS OF IE BULLETIN 79-14, "SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS" AND LICENSEE ACTION ON PREVIOUS INSPECTION FINDINGS. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 24-26 (80-09): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 17 INSPECTOR-HOURS ON SITE IN THE AREAS OF IE BULLETIN 79-14, "SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS," AND LICENSEE ACTIONS ON PREVIOUS INSPECTION FINDINGS. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 2 - MARCH 7 (80-11): THIS INSPECTION INVOLVED 56 INSPECTOR-HOURS ON SITE IN THE AREAS OF TECHNICAL SPECIFICATION COMPLIANCE.

80-07	04/23/80	S	.5	B	2		ZZ	TURBIN	UNIT BROUGHT OFF LINE FOR TURBINE OVERSPEED TESTING AND REMAINED DERATED FOR TESTING.
80-08	04/24/80	F	27.4	A	3		EC	ZZZZZZ	RX SCRAM ON TURBINE TRIP DUE TO MOMENTARY LOSS OF DC TO EHC. THE UNIT REMAINED DERATED DUE TO OFFGAS PROBLEMS, PCIOMR AND TO REPAIR STEAM LEAKS.

SUMMARY

THE UNIT CAME ON LINE ON 04/22/80 FOLLOWING AN OUTAGE FOR TORUS VENT HEADER DEFLECTOR INSTALLATION AND 18-MONTH SURVEILLANCE, AND WAS REMOVED FROM SERVICE ON 04/23/80 FOR TURBINE OVERSPEED TESTING. A REACTOR SCRAM FOLLOWING A TURBINE TRIP OCCURRED ON 04/24/80 FROM MOMENTARY LOSS OF DC POWER TO THE ELECTROHYDRAULIC COOLING SYSTEM.

REPORTABLE OCCURRENCES, HOUSEKEEPING, OPERATOR PERFORMANCE, OVERALL PLANT OPERATIONS, QUALITY ASSURANCE PRACTICES, STATION AND CORPORATE MANAGEMENT PRACTICES, CORRECTIVE AND PREVENTATIVE MAINTENANCE ACTIVITIES, SITE SECURITY PROCEDURES, RADIATION CONTROL ACTIVITIES AND SURVEILLANCE ACTIVITIES. OF THE ELEVEN AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SIX AREAS; SIX ITEMS OF NONCOMPLIANCE WERE FOUND IN FIVE AREAS (INFRACTION - FAILURE TO FOLLOW PROCEDURE; INFRACTION - FAILURE TO OPERATE THE RSCS PROPERLY; INFRACTION - FAILURE TO MAKE IMMEDIATE NOTIFICATION TO THE NRC; INFRACTION - FAILURE TO LIMIT ROD MOTION WITH RSCS INOPERABLE; INFRACTION - FAILURE TO EVALUATE PROCEDURE CHANGE; INFRACTION - FAILURE TO PROVIDE UPDATED PLANT DRAWINGS IN THE CONTROL ROOM).

INSPECTION MARCH 10-19 (80-12): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 33 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIOLOGICAL AND NONRADIOLOGICAL ENVIRONMENTAL PROTECTION INCLUDING MANAGEMENT CONTROLS, REVIEW OF PREVIOUS ENFORCEMENT MATTERS, REVIEW OF ENVIRONMENTAL SURVEILLANCE, REVIEW OF SPECIAL SURVEILLANCE AND STUDY ACTIVITIES, STATUS REVIEW OF LICENSEE EVENT REPORTS, SELECTED SOIL AND GROUNDWATER INDEPENDENT SAMPLING. OF THE SIX AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FIVE AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - ENVIRONMENTAL MONITORING).

INSPECTION MARCH 11-14 AND 25-28 (80-13): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 26 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSERVICE INSPECTION ACTIVITIES (UNIT 2) AND MAINTENANCE WELDING PROGRAM (UNIT 1 AND 2). OF THE 2 AREAS INSPECTED, 2 ITEMS OF NONCOMPLIANCE WERE FOUND IN 2 AREAS (DEFICIENCY - FAILURE TO APPROVE ISI PLAN; AND INFRACTION - FAILURE TO CERTIFY WELDING AND NDE INSPECTORS).

INSPECTION APRIL 2-4 (80-15): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 8 INSPECTOR-HOURS ON SITE IN THE AREA OF INSTALLED EQUIPMENT REVIEW WITH RESPECT TO THE IE BULLETIN 79-01B RESPONSE. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 26-28 (80-16): INCLUDED REVIEW OF LICENSEE COMMITMENTS MADE DURING THE JANUARY 25, 1980 ENFORCEMENT MEETING, PHYSICAL BARRIERS (PROTECTED AREA), PHYSICAL BARRIERS (VITAL AREA), LIGHTING, ACCESS CONTROL (IDENTIFICATION, AUTHORIZATION AND BADGING), ACCESS CONTROL (SEARCH), AND COMMUNICATIONS. THE INSPECTION INVOLVED 15 INSPECTOR-HOURS ON SITE BY 2 NRC INSPECTORS. THE INSPECTION WAS BEGUN DURING AN OFFSHIFT PERIOD, 5 INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE 7 AREAS EXAMINED DURING THE INSPECTION EXCEPT FOR THE FOLLOWING 2 ITEMS: (1) ACCESS CONTROL - FAILURE TO CONTROL ALL POINTS OF PERSONNEL ACCESS INTO VITAL AREAS AND TO VITAL EQUIPMENT (INFRACTION); (2) LIGHTING - FAILURE TO MAINTAIN LIGHTING EQUIPMENT AS COMMITTED TO IN THE SECURITY PLAN (DEFICIENCY); (3) CERTIFICATION OF BULLET RESISTANT STRUCTURES (UNRESOLVED).

INSPECTION MARCH 31 - APRIL 2 (80-18): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 16 INSPECTOR-HOURS ON SITE IN THE AREAS OF FOLLOWUP OF RESIDENT-INSPECTOR IDENTIFIED ITEMS OF NONCOMPLIANCE, UNIT STARTUP OPERATIONS AND POST-MODIFICATION TESTING. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO PERFORM POST-MODIFICATION TESTING).

ENFORCEMENT MEETING APRIL 16 (80-20): DISCUSSED LICENSEE'S ENFORCEMENT HISTORY, OPERATIONAL EVENTS, AND SECURITY ISSUES. GEORGIA POWER COMPANY REPRESENTATIVES ACKNOWLEDGED THE NRC CONCERNS AND INDICATED THAT CORRECTIVE ACTION WOULD BE IMPLEMENTED IN THE AREAS IDENTIFIED.

```

LICENSE STATUS

The unit produced electricity to the expiration date (October 31, 1974) of delay granted by the AEC for installation of an ECCS system. The ECCS system was not subsequently installed and the unit was defueled on January 30, 1976.

On February 11, 1980, the NRC requested the utility to show cause as to why the operating authority of the license should not be revoked and why the licensee should not submit a plan within 120 days of this order to decommission the unit.

+ MANAGERIAL ITEMS:

+ On April 12, 1980 Mr. M. S. Skoszko assumed the duties of Security Administrator.

PLANT STATUS:

+ At 100% Power.

+ LAST IE SITE INSPECTION DATE: 5/12/80

+ INSPECTION REPORT NO: 50-247/80-07

SUMMARY

INSPECTION SUMMARY

+ 50-247/79-25 - Dec 9 - Feb 2: Routine resident inspection of plant operations including shift logs and records; action on previous inspection findings; observation of physical security; turbine rotor cracking problems; review of periodic reports; review of a seismic event; Short Term Lessons Learned verification; and Emergency Planning. The inspection also included a special review of a radioactive waste discrepancy report. The inspection involved 59 onsite hours by the resident inspectors and 4 onsite hours by one region-based radiation specialist. Two items of noncompliance with Department of Transportation regulations were identified.

+ 50-247/80-03 - Mar 19-21: Inspection (16 onsite hours) by the resident reactor inspector of actions taken to comply with the Confirmatory Order issued on February 11, 1980. No items of noncompliance were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- There were several trips due to electrical switching problems off site; a load reduction occurred on 4/23 due to turbine noise, circulator and condenser leaks. The unit returned to 100% power on 5/11/80.

FACILITY ITEMS (PLANS AND PROCEDURES):

- An On-Site Safety Review Group has been established to comply with the sixty-day requirements of the Confirmatory Order issued February 11, 1980.

MANAGERIAL ITEMS:

- Mr. George T. Berry has assumed the position of President and Chief Operating Officer. Mr. Peter W. Lyon has assumed the position of Senior Vice President - Nuclear Generation and is now the Corporate Contact.

PLANT STATUS:

- Unit at 100% power.

- LAST IE SITE INSPECTION DATE: 5/12/80
- INSPECTION REPORT NO: 50-286/80-07

SUMMARY

INSPECTION SUMMARY

- 50-286/79-27 - Oct 28 - Nov 24: Routine inspection of plant operations including: log and record reviews; facility tours; action on previous inspection findings; observation of physical security; reported events; radiation protection operations; containment leak rate testing; action related to IE Bulletin 79-14; and, actions on IE Information Notices. The inspection involved 49 onsite hours by two resident inspectors. One item of noncompliance was identified (entering a High Radiation Area).
- 50-286/79-28 - Nov 27: Special unannounced inspection (6 onsite hours) by one region-based inspector to review certain areas of radiation protection and security. Also, the inspector reviewed the licensee's evaluation of a discrepancy in October 1979 personnel dosimetry results. The inspection consisted of the following areas: surveys; procedures and records; training; plant tours; and, liquid effluent discharges. No noncompliances were identified.
- 50-286/79-30 - Dec 10-14: Routine, unannounced inspection (40 onsite hours) by one NRC region-based inspector of the Radioactive Waste System. Also, actions on previous inspection findings and IE Bulletins were reviewed. Areas inspected included: liquid and gaseous radioactive effluent releases; reports of radioactive effluents; effluent release procedures; reactor coolant water quality; and solid radioactive waste. A plant tour of areas was made to observe radioactive waste handling operations. Three noncompliances were identified (failure to perform review, failure to have adequate procedures, failure to label a container of radioactive materials).
- 50-286/80-03 - Mar 19-24: Unannounced inspection by the Resident Inspector (20 onsite hours) of actions taken to comply with the Confirmatory Order issued on February 11, 1980. No items of noncompliance were identified.

SUMMARY

THE UNIT WAS SHUTDOWN FROM 04/06/80 TO 04/19/80 TO REPAIR BEARINGS IN THE CIRCULATING WATER PUMPS. LOAD REDUCTIONS OCCURRED ON 04/22/80 TO ELIMINATE A RATTLE IN A LOW-PRESSURE TURBINE SPINDLE, AND ON 04/24/80 DUE TO CONDENSER LEAKS. A GENERATOR OUTPUT FEEDER TRIP FROM SPURIOUS RELAY ACTUATION RESULTED IN A UNIT TRIP ON 04/26/80.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 6.8.1 STATES, THAT, "WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED THAT MEET THE REQUIREMENTS AND RECOMMENDATIONS OF SECTION 5.1 AND 5.3 OF ANSI 18.7-1972." SECTION 5.1.6.1 OF ANSI 18.7, 1972, STATES THAT "MAINTENANCE THAT CAN AFFECT THE PERFORMANCE OF SAFETY-RELATED EQUIPMENT SHALL BE PROPERLY PREPLANNED AND PERFORMED IN ACCORDANCE WITH WRITTEN PROCEDURES, DOCUMENTED INSTRUCTIONS OR DRAWINGS APPROPRIATE TO THE CIRCUMSTANCES..." CONTRARY TO THE ABOVE, NO PROCEDURES, INSTRUCTIONS OR DRAWINGS EXISTED AT THE PLANT ON JANUARY 17, 1980, TO INSTRUCT MAINTENANCE PERSONNEL WHERE TO ADD LUBRICATING OIL TO THE EMERGENCY DIESELS WHEN THEY WERE OPERATING OR SHUTDOWN. THIS RESULTED IN THE ADDITION OF FIVE BARRELS OF OIL TO THE 1B EMERGENCY DIESEL'S AIR BOX. IT IS HIGHLY PROBABLE THAT WITH THE ADDITION OF THIS OIL TO THE AIR BOX, THE 1B EMERGENCY DIESEL WAS INOPERABLE FROM ABOUT 10:00 P.M. ON JANUARY 17, 1980, UNTIL THE AFTERNOON OF JANUARY 18, 1980, WHEN THE OIL WAS DRAINED FROM THE AIR BOX.
(8002 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

MANAGERIAL ITEMS

- Effective March 1, 1980, the licensee announced that Mr. D. C. Hintz replaced C. R. Luoma as Plant Manager, and Mr. Luoma was named Assistant Manager of Nuclear Power and is assigned to the Corporate Office. (80-07)

PLANT STATUS

The plant operated routinely at power during the month.

*LAST IE SITE INSPECTION DATE: March 18-21, 1980

- INSPECTION REPORT NO: 80-07

SUMMARY

INSPECTION SUMMARY

- Investigation on February 4-6, (80-03): Because NRC personnel were concerned that NRC was not informed of the condition of the 1B diesel generator during a 24-hour period following a reactor trip and a partial loss of station power which occurred on January 17, 1980, reviewed procedures and records, made observations and interviewed personnel. The investigation involved 31 investigation hours by two investigators. No information was obtained which indicated that licensee personnel withheld information from the NRC concerning the 1B diesel generator. No items of noncompliance were identified.
- Inspection on March 18-21, (80-07): Routine, announced inspection of training, requalification training, calibrations (TS and non-TS), IE Bulletin followup, nonroutine events, design changes, and independent inspection. The inspection involved 55 inspector hours onsite by two NRC inspectors. The inspectors were accompanied by two NRC inspectors in training. No items of noncompliance or deviations were identified.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-14/ 04L-0	03/18/80	04/16/80	Circulation water inlet temperature above 40 degrees F.

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENTS

- Licensee Amendment No. 18, issued February 4, 1980, permits the licensee to expand their fuel storage capability from 134 to 440 fuel assemblies. The new double tier racks are expected to be delivered in early March and installed in May 1980. (80-02)

FACILITY ITEMS

- On February 26, 1980, NRR issued LACBWR a Show Cause Order to show why they should not install a site dewatering system to prevent soil liquefaction in the event of an earthquake. The licensee has 25 days to respond. (80-02)

MANAGERIAL ITEMS

- Dairyland Cooperative has hired an Electrical/Instrument Engineer, an Operations Engineer, two QA Technicians and an Operator since the Management Meeting in October 1979 and is actively pursuing the acquisition of a Nuclear Engineer, Mechanical and Asistant Mechanical Engineer and a Health Physicist. (80-02)

PLANT STATUS

Plant shutdown for equipment modifications per NUREG-0578.

+LAST IE SITE INSPECTION DATE: February 11-15, 1980

+ INSPECTION REPORT NO: 80-02

INSPECTION SUMMARY

- Inspection on February 11-15, (80-02): Routine, unannounced inspection of the licensee's training and retraining programs, surveillance activities; calibration program; procedure changes with regard to Small Break Loss of Coolant Accidents; and followup actions relative to IE Bulletins, IE Circulars, Licensee Event Reports, and special reports. The inspection involved 45 inspector hours onsite by two NRC inspectors. No items of noncompliance were identified in the 10 areas inspected.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-01	04/10/80		Electrical Penetrations 3, 4 and 5 failed type B containment leak rate tests.
80-02	04/16/80		Abnormal degradation discovered in the primary reactor containment during periodic type C surveillance leak test.

SUMMARY

INSPECTION SUMMARY

- 50-245/80-02 - Jan 2-4, 9-11, 29-31 & Feb 13-15, 20-22: Special announced investigation conducted by three region-based investigators of Isolation Condenser System piping, pipe support, and dry-well concrete for their ability to withstand loads imposed by seismic, blowdown, or water-hammer event. The investigators reviewed stress reports of piping and pipe supports, witnessed tests and NDE examination of the piping and supports, visually examined cracked concrete, interviewed engineering and technical personnel, and conducted a technical evaluation of data and other information presented by the licensee to determine the structural adequacy of this system. The investigation involved 174 investigator hours by three region-based investigators, 34 hours by a NRR engineer and 6 hours by a region-based section chief at the licensee's corporate offices, the licensee's contractor's offices and the plant site. Noncompliances: One (failure to promptly identify, evaluate, and document a nonconformance).
- 50-245/80-04 - Mar 1-29: Routine, onsite, regular and backshift inspection by two resident inspectors (84 hours). Areas inspected included the control room and the accessible portions of the reactor, turbine, radioactive waste, gas turbine generator, and intake buildings; radiation protection; physical security; fire protection; plant operating records; surveillance testing; calibration; maintenance; core power distribution limits; and reporting to the NRC. Noncompliances: None.

ENFORCEMENT STATUS

A VITAL AREA BARRIER HAD AN OPENING LARGE ENOUGH FOR A PERSON TO CRAWL THROUGH.
(8003 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS

+ The plant shutdown on February 22, 1980 for a five week refueling outage. (80-02)

PLANT STATUS

+ The plant is currently shutdown due to a drywell to torus leak through the vacuum breakers and to correct a seal problem on the No. 12 recirculation pump.

\+LAST IE SITE INSPECTION DATE: February 26-27 and March 10, 1980

+ INSPECTION REPORT NO: 80-05

SUMMARY

INSPECTION SUMMARY

+ Inspection on February 19-22 and March 3-4, (80-02): Routine unannounced inspection of maintenance, nonroutine event followup; IE Bulletin and Circular followup, calibrations, preparations for refueling, refueling activities, refueling maintenance, and independent inspection. The inspection involved 42 inspector hours onsite by one NRC inspector. The inspector was accompanied by one NRC inspector trainee. No items of noncompliance or deviations were identified.

+ Inspection on February 26-27 and March 10, (80-05): Inservice Inspection (ISI) and torus structural modifications, QA/QC programs, implementing procedures, work activities, and review and evaluation of nondestructive examination (NDE) and welding data and reports. The inspection involved 17 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

```
INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS:

+    The unit operated continuously at essentially
     full power with the exception of a two day power
     reduction to approximately 60% power due to an
     attached feedwater pump lube oil fire which occurred
     on 4/21.  Representative stack and offgas release
     rates are 19.6 and 9800 microcuries per second,
     respectively.

+ LAST IE SITE INSPECTION DATE:  5/9/80

+         INSPECTION REPORT NO:  50-220/80-04

     SUMMARY

     INSPECTION SUMMARY

+    50-220/80-02 - Mar 3-7:  Routine, unannounced inspection by
     two region-based inspectors of small break loss of coolant
     accident procedures; small break loss of coolant procedures
     training; verification of as built safety-related piping
     systems; isolation condenser piping supports; and facility
     tours.  Arrangements for establishment of an onsite office
     for a full-time NRC inspector were also made.  The inspection
     involved 64 inspector-hours onsite by two NRC region-based
     inspectors and one supervisor.  Noncompliances: None.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY UNIT 1 TECHNICAL SPECIFICATION 6.5.1.6.B, THE STATION NUCLEAR SAFETY AND OPERATING COMITTEE (SNSOC) SHALL REVIEW ALL PROPOSED TESTS AND EXPERIMENTS WHICH AFFECT NUCLEAR SAFETY. CONTRARY TO THE ABOVE, A TEST INVOLVING "PERKING" OF A MAIN STEAM LINE NON-RETURN VALVE TO DETERMINE IF THIS WAS THE SOURCE OF LOOSE PARTS INDICATIONS ON FEBRUARY 23, 1980, WAS NOT REVIEWED BY THE SNSOC PRIOR TO CONDUCT. THE TEST RESULTED IN A SAFETY INJECTION ACTUATION.

SUMMARY

INSPECTION SUMMARY

INSPECTION MARCH 10-14 (80-12): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 15 INSPECTOR-HOURS ON SITE IN THE AREAS OF POST-REFUELING OPERATIONS, START-UP TESTING, CORE PERFORMANCE MONITORING AND FUEL HANDLING. IN THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 24-27 (80-13): THIS ROUTINE UNANNOUNCED INSPECTION INVOLVED 22 INSPECTOR-HOURS ON SITE IN THE AREAS OF LICENSEE EVENT REPORTS AND PREVIOUS INSPECTION FINDINGS. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 19-20 (80-15): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 11 INSPECTOR-HOURS ON SITE IN THE AREAS OF DEGRADED GRID VOLTAGE PROTECTION AND FOLLOW-UP INSPECTION OF LICENSEE IDENTIFIED ITEMS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

♦ INSPECTION MARCH 3 - APRIL 11 (80-16): THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED SIX HOURS ON SITE IN THE AREAS OF LICENSEE EVENT REPORTS AND SELECTED SHORT TERM LESSONS LEARNED (NUREG-0578) REQUIREMENTS. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
80-12	04/03/80	F	81.0	H	3	80-37	SF	VALVEX	HIGH STEAM FLOW AND LOW STEAM PRESSURE SAFETY INJECTION WITH REACTOR TRIP. WHILE ATTEMPTING TO PERFORM A 3 DEG STROKE TEST ON "A" MAIN STEAM LINE TRIP VALVE THE VALVE WENT FULLY CLOSED. RESET ALL MSIV'S TO PROPER DEGREE OF STROKE.
80-13	04/08/80	F	4.3	G	3				TURBINE TRIP CAUSED REACTOR TRIP. ELECTRICAL HYDRAULIC CONTROL SYSTEM RESERVOIR LO-LO LEVEL ALARM ACTUATION. LIMIT SWITCH WAS INADVERTANTLY OPERATED BY TURBINE OPERATOR WHILE ATTEMPTING TO DETERMINE CAUSE FOR HI LEVEL ALARM.

SUMMARY

OPERATION WAS ROUTINE DURING THE REPORT PERIOD, EXCEPT FOR AN OUTAGE FROM 04/03/80 THROUGH 04/06/80 WHEN A SAFETY INJECTION AND REACTOR TRIP OCCURRED DURING A STROKE TEST ON THE "A" MAIN STEAM LINE TRIP VALVE. A TURBINE/REACTOR TRIP OCCURRED ON 04/08/80 FROM INADVERTENT OPERATION OF THE LO-LO ALARM DURING INVESTIGATION OF THE HIGH LEVEL ALARM IN THE ELECTROHYDRAULIC CONTROL SYSTEM RESERVOIR.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4.1.E, MAINTENANCE ACTIVITIES WHICH COULD AFFECT SAFETY ARE REQUIRED TO BE ACCOMPLISHED BY ADHERENCE TO PROCEDURES AND INSTRUCTIONS. WORK REQUESTS 54292 AND 57139 WERE ISSUED WITH INSUFFICIENT INSTRUCTIONS TO INSURE THAT THE PROPER GASKET WOULD BE ISSUED TO WORKMEN FOR PRIMARY MANWAY INSTALLATIONS ON A OTSG. FURTHER MP/0/A/1130/2 WAS NOT FOLLOWED COMPLETELY WHICH RESULTED IN A PRIMARY SYSTEM BOUNDARY LEAK ON FEBRUARY 9, 1980, WHILE THE PLANT WAS HEATING UP IN PREPARATION FOR RETURN TO POWER OPERATION.
(8007 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4.1.A PROCEDURES SHALL BE FOLLOWED FOR OPERATION OF SYSTEMS AND COMPONENTS INVOLVING NUCLEAR SAFETY OF THE FACILITY. ON FEBRUARY 5, 1980, THE EMERGENCY FEEDWATER TURBINE WAS PLACED INTO OPERATION WITHOUT VERIFYING BEARING OIL PRESSURE AS INSTRUCTED IN OP/1/A/1106/06 RESULTING IN DESTRUCTION OF THE TURBINE BEARINGS.
(8007 INFRACTION)

SUMMARY

INSPECTION SUMMARY

INSPECTION FEBRUARY 1-29 (80-05): THIS ROUTINE INSPECTION INVOLVED 50 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, OUTAGE ACTIVITIES, WITNESSING TESTING, COMPLIANCE WITH THE JANUARY 2 AND FEBRUARY 7, 1980 SHOW CAUSE ORDERS, PLANT TOURS, FOLLOWUP ON PREVIOUS INSPECTION FINDINGS, VERIFYING COMPLETION OF SELECTED FIRE PROTECTION COMMITMENTS, AND MEETING WITH LOCAL CIVIL DEFENCE PERSONNEL. OF THE EIGHT AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SIX AREAS; TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (INFRACTION: FAILURE TO FOLLOW A PROCEDURE RESULTING IN DAMAGE TO STEAM DRIVEN EMERGENCY FEEDWATER TURBINE BEARINGS; AND INFRACTION: FAILURE TO FOLLOW PROCEDURES RESULTING IN AN INCORRECT PRIMARY GASKET TO BE INSTALLED ON A STEAM GENERATOR MANWAY).

- INSPECTION MARCH 3-31 (80-13): THIS ROUTINE INSPECTION INVOLVED 36 RESIDENT INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, OUTAGE ACTIVITIES, FOLLOWUP ON PREVIOUS INSPECTION FINDINGS, AND REVIEW OF LER'S. OF THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
5	04/17/80	F	.0	A	5		CB	MOTORX	LOW OIL LEVEL AND ERRATIC TEMPERATURES ON 1B1 RCP MOTOR BOTTOM BEARING. POWER REDUCED AND PUMP REMOVED FROM SERVICE
5A	04/22/80	F	8.3	A	1		CB	MOTORX	LOW OIL LEVEL ON 1A1 RCP MOTOR BOTTOM BEARING. UNIT WAS SHUTDOWN TO ADD OIL.
6	04/22/80	F	4.7	A	1		HA	TURBIN	HIGH TURBINE BEARING VIBRATION. UNIT WAS SHUTDOWN AND RESTARTED.
7	04/23/80	F	.0	A	5		CB	MOTORX	POWER REDUCTION CONTINUES. THE 1B1 RCP MOTOR WILL REQUIRE A LENGTHY OUTAGE FOR INSPECTION BEFORE RESTARTING.

SUMMARY

OPERATION WAS AT NEAR FULL POWER UNTIL 04/17/80 WHEN LOAD WAS REDUCED TO 72% THROUGH THE END OF THE PERIOD DUE TO LOW OIL LEVEL AND ERRATIC TEMPERATURES ON THE LOWER MOTOR BEARING. THE UNIT WAS SHUTDOWN ON 04/22/80 TO ADD OIL TO A REACTOR COOLANT PUMP MOTOR LOWER BEARING, AND AGAIN DUE TO A MANUAL TURBINE TRIP AND RESTART BECAUSE OF HIGH VIBRATION.

PLANT STATUS

Reactor shutdown on September 8, 1979, to begin a 10-week scheduled refueling amd maintenance outage. Start-up tentatively scheduled for mid-May 1980.

+LAST IE SITE INSPECTION DATE: February 1980

+ INSPECTION REPORT NO: 80-03

SUMMARY

INSPECTION SUMMARY

+ Inspection during February 1980, (80-03): Routine resident inspection program activities during February 1980, including: inspection during long-term shutdown; reportable occurrences; and actions on IE Bulletins and NUREG-0578 items. The inspection involved 78 inspector hours onsite by two NRC inspectors. No items of noncompliance or deviations were identified in the areas inspected.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-02/ 03L-0	10/23/79	04/03/80	During routine testing, snubber No. 5-6, on main steam line, failed to meet the test acceptance criteria.
80-03/ 01T-0	03/04/80	04/03/80	During evaluation of SEP Topic RE HELB, it was determined that incorrect assumptions for initiztion of containment spray as well as inaccuracies in SG mass-energy inventories resulted in predicted peak containment pressures being lower than actual.
80-04/ 01T-0	03/27/80 he	04/10/80	During review of TS Surveillance Procedures, it was discovered that procedure MO-19 required isolation of both containment spray headers during performance of the test.
80-05/ 01T0	03/27/80	04/10/80	During review of TS Surveillance Procedures, it was discovered that two procedures (QO-2 and MO-23) require stroking the SIRW Tank oulet valves.
80-06/ 03L-0	11/10/79	04/21/80	During routine surveillance of containment purge valves, it was found that the redundant T-ring air supplies for the 12-inch and 48-inch purge valves were leaking in excess of criteria.
80-07/ 01T-0	04/07/80	04/21/80	During maintenance on the control room ventilation system, two defects which would have permitted large inleakage of contamination into the control room under accident conditions were discovered.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO THE ABOVE, ON 1/3/80, WITH UNIT 2 IN POWER OPERATION & THE DRYWELL BEING DEINERTED, 2 DRYWELL REQUIREMENTS HAD BEEN IMPOSED TO RESTRICT OPENING OF CONTAINMENT VENTILATION SYSTEM VALVES TO AN OPENING WHEREBY CLOSURE AGAINST POST LOCA CONDITIONS IS ASSURED. FURTHER, THE ENGINEERING REVIEW & IDENTIFICATION OF THIS DEFICIENCY HAD BEEN COMPLETED ON 3/2/79 & CORRECTIVE ACTION DESCRIBED IN PECO LTR TO RI DTD 3/29/79 STATED THAT OPENINGS OF THESE VALVES ARE RESTRICTED, THAT THE SUPPLY PRESSURE TO THE VALVES WAS ADJUSTED SO THAT THE VALVES WOULD ONLY OPEN TO 30 DEGREES & THAT THESE OPERATIONS WERE ADDRESSED IN A SYSTEM PROCEDURE.
(8004 INFRACTION)

ON 2/22/80 A ROUND SHEET DEVELOPED TO PROVIDE ADMINISTRATIVE CONTROL OVER CONTAINMENT VENTILATION VALVE SEISMIC CAPABILITY DESIGNED TO ASSURE CONTAINMENT INTEGRITY WAS BEING USED WITHOUT INCORPORATION INTO SYSTEM PROCEDURES & WITHOUT PORC REVIEW & APPROVAL.
(8004 INFRACTION)

TS 6.8.1 STATES IN PART, "WRITTEN PROCEDURES & ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED & MAINTAINED..." PROCEDURE A-14, "PLANT MODIFICIATION, REV 6, DTD 8/8/78 & SUBSEQUENT REVISIONS, STATES IN PART, "THE MODIFICATION COORDINATION SHALL...DOCUMENT THE NEED FOR PROCEDURE...REVISIONS ON THE PCMS." CONTRARY TO THE ABOVE, THE NEED FOR REQUIRED PROCEDURAL REVISIONS WAS NOT DOCUMENTED ON THE PMCS FOR MOD 510 (79-29), INITIATED 3/16/79. PROCEDURE A-14, "PLANT MODIFICATION, REV 6, DTD 8/8/78 & SUBSEQUENT REVISIONS, STATES IN PART, "AN INDEPENDENT DESIGN REVIEW SHALL BE...DOCUMENTED BY SIGNING...THE PMCS."
(8004 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

MANAGERIAL ITEMS:

- Mr. V. S. Boyer was appointed Sr. Vice President, Nuclear Power. His role is an overall coordination of the company's nuclear activities. Mr. John H. Austin, the Executive Vice President, was designated Chief Executive Officer. Mr. John S. Kemper was promoted from Manager, Engineering and Research, to Vice President, Engineering and Research.
- On April 24, the NRC conducted a technical meeting with the licensee and a public meeting to discuss upgraded emergency planning criteria.

PLANT STATUS:

- The plant continued a scheduled refueling outage. All fuel was off-loaded to the fuel pool. Reactor vessel in-service inspection and feedwater sparger replacement were begun. The suppression chamber (torus) was dewatered for torus structural modifications.

- LAST IE SITE INSPECTION DATE: 4/30/80
- INSPECTION REPORT NO: 50-277/80-07

SUMMARY

INSPECTION SUMMARY

- 50-277/79-09 - Mar 19-30: Special, announced inspection of the licensee's management controls over licensed activities. The inspection involved 168 inspector-hours onsite and 136 inspector-hours in the corporate offices by four NRC inspectors. Noncompliances: Three (failure to provide an adequate retraining program for non-licensed personnel; failure to perform quality assurance audits; and failure to follow procedures). Deviations: One (unqualified receipt inspectors).
- 50-277/80-06 - Mar 17-21: Routine, unannounced inspection (17 hours) by a region-based inspector of administrative controls for surveillance procedures; surveillance testing; inspector witnessing of surveillance testing; technician qualification; and facility tour observations. Noncompliances: One (failure to properly document two surveillance tests and corrective maintenance; and failure to record Technical Specification required data).

INSPECTION STATUS

ENFORCEMENT STATUS

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- Repair of a cracked weld in the suction piping of residual heat removal pump No. 3D was accomplished between 4/14 and 4/20; the crack had initiated in a weld attaching a 1-inch drain line and had propagated a short distance (less than 2 inches) into the pipe.

MANAGERIAL ITEMS:

- Mr. V. S. Boyer was appointed Sr. Vice President, Nuclear Power. His role is an overall coordination of the company's nuclear activities. Mr. John H. Austin, the Executive Vice President, was designated the Chief Executive Officer. Mr. John S. Kemper was promoted from Manager, Engineering and Research, to Vice President, Engineering and Research.
- The NRC conducted a technical meeting with the licensee and a public meeting on April 24 to discuss upgraded emergency planning criteria.

PLANT STATUS:

- The reactor operated at a nominal 100 percent power during the month. Representative offgas and combined Unit 2 and Unit 3 stack gas release rates were 3420 microcuries per second and 187 microcuries per second, respectively.

- LAST IE SITE INSPECTION DATE: 4/30/80

SYSTEMS AND COMPONENT PROBLEMS:

- Replaced three Jet Pump hold down bars (Assemblies #1, 3, 15).
- MANAGERIAL ITEMS:
- Possible strike by represented employees on or about 5/15/80.

PLANT STATUS:

- Shutdown for refueling outage; refueling complete - startup scheduled for 5/7/80 pending completion of STLL, IEB 79-14, and ILRT.
- LAST IE SITE INSPECTION DATE: 4/22/80
- INSPECTION REPORT NO: 50-293/80-18

SUMMARY

INSPECTION SUMMARY

- 50-293/80-08 - Feb 27-29: Special inspection by one region-based inspector of the Security Program, previous items of noncompliance and IEB 79-16. One item of noncompliance was identified (failure to follow response procedures).
- 50-293/80-10 - Mar 5-7: Routine, unannounced inspection by two region-based inspectors of SNM control and accounting. No items of noncompliance were identified.
- 50-293/80-12 - Mar 5-7, 19-20: Investigation by five region-based inspectors of allegations involving shipments of spent fuel to a burial site. No items of noncompliance were identified.
- 50-293/80-15 - Feb 27-29: Unannounced inspection by one Region II inspector of activities involving a shipment of radioactive waste to a burial site. No items of noncompliance were identified.
- 50-293/80-17 - Mar 13-14: Unannounced inspection by one Region II inspector of activities involving a shipment of radioactive waste to a burial site. No items of noncompliance were identified.

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS

- The unit was placed online on April 6, 1980 following an outage in March for Inservice Inspection of the Steam Generator Tubes.

- LAST IE SITE INSPECTION DATE: March 6 and 20, 1980

- INSPECTION REPORT NO: 80-05

SUMMARY

INSPECTION SUMMARY

- Inspection on January 8-11, (80-01): Routine, unannounced inspection of incore/excore calibration; isothermal temperature coefficient measurement; target axial flux difference calculation; shutdown margin determination; reactivity anomaly determination. The inspection involved 19 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

- Inspection on February 25-26, (80-03): Licensee actions relative to IE Bulletin No. 79-14, including general discussion on NRC requirements, work procedure review, and review of analysis and calculations. The inspection involved 16 inspector hours onsite by one NRC inspector. No items of non-compliance or deviations were identified.

- Inspection on February 19-20, (80-04): Routine, unannounced inspection to review plant operations, non-routine event follow-up and independent inspection. The inspection involved 15 inspector hours onsite by one NRC inspector. Of the three areas inspected, no items of noncompliance were identified in two areas. One item of noncompliance was identified in one area (minimum number of Auxiliary Feedwater Pumps not capable of automatic operation during two unit operation).

- Inspection on March 6 and 20, (80-05): QA/QC programs, implementing procedures, work activities, and records relative to the steam generators tube inspections. The inspection involved six inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

SUMMARY

INSPECTION SUMMARY

* Inspection on February 1-29, (80-04): Management meeting on February 26, 1980. Routine resident inspection of plant operation, maintenance, surveillance, security, radioactive waste system, and followup of operating event. The inspection involved 88 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

* Inspection on March 1-31, (80-06): Routine resident inspection of plant operation, maintenance, followup of licensee reported events and review of licensee small break loss of coolant accident procedures. The inspection involved 85 resident inspection hours onsite and 24 inspector hours onsite by one regional based inspector. No items of noncompliance or deviations were identified.

PLANT STATUS

Unit operating routinely.

+LAST IE SITE INSPECTION DATE: January 4; March 6-7 and 9-11, 1980

+ INSPECTION REPORT NO: 80-08

SUMMARY

INSPECTION SUMMARY

+ Inspection on February 4 through March 3, (80-04): Routine, unannounced resident inspection of maintenance, plant operations, physical protection-security organization; physical barriers; and access control (identification, authorization, badging, search, and escorting); review and followup on licensee event reports, refueling activities, surveillance of safety related systems, followup on Headquarters request, radiation training, IE Circular followup, independent inspection and media contacts. The inspection involved 147 inspector hours onsite by one NRC inspector. Of the 13 areas inspected, no apparent items of noncompliance were identified in 11 areas; 3 items of noncompliance were identified in two areas (exceeding a limiting condition for operation; failure to follow procedures; and inadequate procedure).

+ Inspection on February 27-28, (80-05): Licensee actions relative to IE Bulletin No. 79-14 including general discussion on NRC requirements, work procedure review and review of analysis and calculations. The inspection involved 12 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

+ Inspection on March 4-25, (80-06): Routine, unannounced inspection consisting of operations safety verification, maintenance, surveillance observation, IE Bulletin followup, licensee event followup, followup on headquarters requests, design changes and modifications, review and audits, and independent inspection. The inspection involved 189 inspector hours onsite by three NRC inspectors. Of the nine areas inspected, no items of noncompliance were identified.

+ Inspection on March 25-27, (80-07): Routine, unannounced inspection of Environmental Protection program including management controls; implementation of environmental monitoring program (radiological and non-radiological); and Confirmatory Measurements of radiological effluents, including comparison of licensee result of sample split in November 1979 to those of the NRC Reference Laboratory and collection of radioactive effluent samples for future comparison. The inspection involved 36 inspector hours onsite by two NRC inspectors. For the areas inspected, no items of noncompliance or deviations were identified.

+ Inspection on January 4; March 6-7 and 9-11, (80-08): Routine, announced inspection of the containment integrated leak rate test; review of previous Unresolved Items. The inspection involved 186 inspector hours onsite by three NRC inspectors. Of the two areas inspected, one item of noncompliance was identified in one area (failure to follow procedure).

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO NRC'S EXEMPTION TO 10 CFR 50, PARAGRAPH 50.46(A), DATED DECEMBER 15, 1978, PARAGRAPH IV(1), AND WITHOUT IMPLEMENTATION OF THE MODIFICATIONS, TWO VALVES ON THE HPI CROSS-CONNECT LINE WERE CLOSED DURING THE PERIOD OF DECEMBER 17 THROUGH DECEMBER 27, 1979. THE TWO VALVES WERE CLOSED AS THE RESULT OF THE LICENSEE FAILING TO ADEQUATELY IMPLEMENT PROCEDURE (A.15) FOR OPERATING THE MAKEUP, PURIFICATION AND LETDOWN SYSTEM. DURING THIS ENTIRE PERIOD OF TIME, THE REACTOR WAS BEING OPERATED AT LEVELS ABOVE 90% OF RATED POWER.
(8006 VIOLATION)

CONTRARY TO TS 3.3.1, THE REACTOR REMAINED CRITICAL BETWEEN DECEMBER 17, 1979 AND JANUARY 9, 1980 (EXCEPT FOR A 16 HOUR SHUTDOWN) WITH ONLY ONE OF THE THREE HIGH PRESSURE INJECTION PUMPS OPERABLE. THE MAKEUP PUMP THAT WAS BEING USED AT THE TIME AS A HPI PUMP WAS INOPERABLE AS AN HPI PUMP BECAUSE MANUAL VALVES IN THE NUCLEAR SERVICE RAW WATER SUCTION AND DISCHARGE LINES FOR THE MAKEUP PUMP LUBE OIL AND ROOM AIR COOLERS WERE CLOSED.
(8006 INFRACTION)

CONTRARY TO TS 6.8.1 AND PROCEDURE A15, DEALING WITH RESTORING THE "B" HIGH PRESSURE INJECTION PUMP TO SERVICE, ON JANUARY 9, 1980, WHEN THE "B" HIGH PRESSURE INJECTION PUMP WAS RETURNED TO SERVICE AND THE MAKEUP PUMP WAS REMOVED FROM SERVICE AS A HIGH PRESSURE INJECTION PUMP, THE OPERATOR FAILED TO CHANGE THE POWER SUPPLY FROM 52-23166 TO 52-24172,THEREBY LEAVING SFV-23508 WITHOUT ELECTRICAL POWER AND INCAPABLE OF CLOSING AS REQUIRED UPON INITIATION OF A SAFETY FEATURES ACTUATION SIGNAL. THIS CONDITION WAS CORRECTED ON JANUARY 10, 1980.
(8006 INFRACTION)

INSPECTION STATUS

SYSTEMS AND COMPONENT PROBLEMS:

- Fire protection and small break loca modifications completed.

FACILITY ITEMS (PLANS AND PROCEDURES):

None.

MANAGERIAL ITEMS:

- Hearing on NRC Order of May 7, 1979 completed receiving testimony on May 14, 1980.

PLANT STATUS:

- Plant continued refueling throughout the month of April.

LAST IE SITE INSPECTION DATE: 04/14-26 & 05/05-09/80+

INSPECTION REPORT NO. 50-312/80-15+

SUMMARY

INSPECTION SUMMARY

- Inspection on April 7-11, 1980 (Report No. 50-312/80-09)
  Areas Inspected: Routine, unannounced inspection of the status of completion of selected fire protection modifications; status of completion of other required modifications; changes in the onsite organization or staffing; the program for receipt, storage and handling of equipment and materials; followup on IE Bulletins and Circulars; and followup on previous inspection findings. The inspection involved 36 inspector hours onsite by one NRC inspector.

  Results: No items of noncompliance or deviations were identified.

NRC POWER RESTRICTIONS: None

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT

- Inspection on March 3-31, 1980 (Report No. 0-312/80-10)
  Areas Inspected: Routine inspections of Licensee Event Report followup; followup on items of noncompliance; and independent inspection effort. The inspection involved 52 inspector hours by the NRC Senior Resident Inspector.

  Results: Of the three areas inspected, no items of noncompliance or deviations were found in two areas. One item of noncompliance was found in one area (Infraction - Movement of objects over the fuel transfer canal without approved procedures).

- Inspection on April 7-10, 1980 (Report No. 50-312/80-11)
  Areas Inspected: Included a review of vital area physical barriers and detection aids. The inspectors also reviewed the status of construction items and plans for new security hardware which upgrade site security features.

  Results: No items of noncompliance or deviations were identified.

- Inspection on April 7-8 & 10, 1980 (Report No. 50-312/80-12)
  Areas Inspected: Routine, announced inspection by a Regional based inspector of the licensee's activities performed in response to IE Bulletin 79-01B, "Environmental Qualification of Class IE Equipment." The inspection involved 18 inspector hours onsite by one NRC inspector.

  Results: No items of noncompliance or deviations were identified.

- Inspection on May 5-9, 1980 (Report No. 50-312/80-13)
  Report being prepared; to be reported next month.

- Inspection on March 25-27, 1980 (Report No. 50-312/80-14)
  Areas Inspected: Routine, unannounced inspection by Regional based inspectors of the licensee's activities performed in response to IE Bulletin 79-02, "Pipe Support Base Plate Design Using Concrete Expansion Anchor Bolts;" IE Bulletin 79-13, "Cracking in Feedwater System Piping;" and an examination of a reported weld cracking problem during valve installation. The inspection involved 24 inspector hours onsite by one NRC inspector.

  Results: No items of noncompliance or deviations were identified.

- Inspection on April 14-26 & May 5-9, 1980 (Report No. 50-312/80-15)
  Report being prepared; to be reported next month.

- Inspection on April 1-30, 1980 (Report No. 50-312/80-16)
  Report being prepared; to be reported next month.

04-01	04/13/80	F	408.3	A	1	80-07	CB	PUMPXX	UNIT WAS SHUTDOWN DUE TO SEAL FAILURE IN "C" REACTOR COOLANT PUMP. DURING COOLING DOWN FOR RCP SEAL INSPECTION, A PRIMARY TO SECONDARY LEAK RATE OF .50 GPM WAS IDENTIFIED IN "B" STEAM GENERATOR. "C" RCP SEALS WERE INSPECTED AND THE NECESSARY MAINTENANCE WAS PERFORMED. 100% EDDY CURRENT TESTING IN ALL THREE STEAM GENERATORS RESULTED IN APPROXIMATELY 149 TUBES BEING PLUGGED.

SUMMARY

OPERATION WAS ROUTINE UNTIL 04/13/80, WHEN THE UNIT WAS SHUTDOWN TO REPAIR A SEAL IN THE "C" REACTOR COOLANT PUMP. EDDY CURRENT TESTING (100%) WAS PERFORMED IN ALL THREE STEAM GENERATORS FOLLOWING DISCOVERY OF AN EXCESSIVE PRIMARY-TO-SECONDARY LEAK RATE IN THE "B" STEAM GENERATOR.

INSPECTION STATUS

ENFORCEMENT STATUS

FAILED TO ISOLATE THE INDIVIDUAL RESPONSIBLE FOR THE BADGE PASSOUT & LAST ACCESS CONTROL FUNCTION TO THE PROTECTED AREA. (7926 INFRACTION)

CONTRARY TO TS 3.0.4, PLANT MODE WAS CHANGED FROM 5 TO 2 WITH ONE CIRCUIT OF VITAL HEAT TRACE INOPERABLE. (8005 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

+ Tell-tale drain from spent fuel pool liner leak has decreased to approximately 78 milliliters/hr as a result of epoxy repairs. Evaluation is in progress to determine if leak is completely repaired and remaining flow is from condensate runoff.

PLANT STATUS:

Operating at full power.

+ LAST IE SITE INSPECTION DATE: 5/5/80

+ INSPECTION REPORT NO: 50-272/80-11

SUMMARY

INSPECTION SUMMARY

+ 50-272/80-02 - Jan 21-25: Unannounced physical security inspection (34 hours) by a region-based inspector of the approved physical security plan, security program audits, security organization, physical barriers (PA/VA), lighting, access control (search)(escorting)(vital areas), alarm station, detection aids, assessment aids, communications, testing and maintenance, compensatory measures, power supply, response, locks, keys and combinations and records and reports. Noncompliances: three (failure to forward a change to the Physical Security Plan to the NRC as required by 10 CFR 50.54(p); failure to assign watchmen only those responsibilities outlined in the plan; failure to revalidate vital area access control to all vital areas every 31 days).

+ 50-272/80-05 - Feb 3 - Mar 1: Routine inspections by the resident inspector (31 hours) of plant operations including: tours of the facility; log and record reviews; review of licensee events; core physics surveillance; and, followup on previous inspection items. Noncompliances: One (failure to meet system operability requirements prior to mode change as required by Technical Specification 3.0.4).

+ 50-272/80-07 - Mar 2-29: Routine inspections by the resident inspector (63 hours) of plant operations including tours of the facility; log and record reviews; review of licensee events; review of periodic reports; followup on implementation of small break LOCA guidelines; and, followup on previous inspection items. Noncompliances: None.

+ 50-272/80-08 - Mar 11-14: Routine, unannounced inspection (33 hours) of refueling startup testing including control rod drive operation and position indication, core power distribution, incore/excore detector calibration, reactor shutdown margin, isothermal temperature coefficient, power coefficient and control rod worth measurements. Noncompliances: None.

+ 50-272/80-09 - Feb 26: Enforcement conference held in NRC Region I between representatives of Public Service Electric and Gas Company and Region I staff to discuss: corrective actions relative to the simultaneous removal from service of all three emergency diesel generators on October 31, 1979; plant physical security matters; and radiation protection matters. Twelve hours of Region I staff time were expended for this meeting.

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

Refueling.

MANAGERIAL ITEMS

None.

PLANT STATUS:

Plant shut down for refueling outage.

LAST IE SITE INSPECTION DATE: 04/01-30/80+

INSPECTION REPORT NO: 50-206/80-12+

SUMMARY

INSPECTION SUMMARY

+ Inspection on March 10-13, 1980 (Report No. 50-206/80-05) Areas Inspected: Routine, unannounced inspection of document control and records programs and independent effort. This inspection involved 23 inspector hours onsite by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

+ Inspection on March 1 - April 4, 1980 (Report No. 50-206/80-09) Areas Inspected: Routine resident inspection of plant operations and followup of licensee event. The inspection involved 94 inspector hours onsite by seven NRC inspectors and management personnel.

Results: Of the two areas examined, two items of noncompliance were identified in the followup of the March 10, 1980 licensee event concerning loss of the salt water cooling system (Infraction - Failure to follow emergency procedure) and (Infraction - Operation outside of a limiting condition for operation).

+ Inspection on March 1 - April 4, 1980 (Report No. 50-206/80-10) Report being prepared; to be reported next month.

+ Inspection on April 21, 1980 (Report No. 50-206/80-11) Report being prepared; to be reported next month.

+ Inspection on April 1-30, 1980 (Report No. 50-206/80-12) Report being prepared; to be reported next month.

+ Inspection on April 23-25, 1980 (Report No. 50-206/80-13) Report being prepared; to be reported next month.

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TECHNICAL SPECIFICATION 3.9.2, ON APRIL 1, 1980 DURING REFUELING OPERATIONS, FLUX MONITOR INDICATION WAS NOT AUDIBLE AT THE REFUEL CAVITY WHERE CORE ALTERATIONS WERE BEING MADE. (8008 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

NONE.

FACILITY ITEMS (PLANS AND PROCEDURES):

NONE.

MANAGERIAL ITEMS:

NONE.

PLANT STATUS:

UNIT IS IN A REFUELING OUTAGE SINCE MARCH 15, 1980.

LAST IE SITE INSPECTION DATE: APRIL 29 - MAY 2, 1980

INSPECTION REPORT NO: 50-335/80-13

SUMMARY

INSPECTION SUMMARY

INSPECTION FEBRUARY 25-26 (80-01): THIS ROUTINE, UANNOUNCED INSPECTION INVOLVED 50 INSPECTOR-HOURS ON SITE IN THE AREAS OF QUALITY CONTROL AND CONFIRMATORY MEASUREMENTS INCLUDING REVIEW OF CHEMICAL AND RADIOCHEMICAL PROCEDURES; AND COMPARISON OF RADIOCHEMICAL ANALYSES OF SPLIT SAMPLES BY THE LICENSEE AND THE NRC REGION II MOBILE LABORATORY. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 28 - FEBRUARY 1 (80-04): INCLUDED REVIEW OF THE SECURITY PLAN, SECURITY PROGRAM AUDIT, SECURITY ORGANIZATION, PHYSICAL BARRIERS (PROTECTED AREA), PHYSICAL BARRIERS (VITAL AREA), LIGHTING, ACCESS CONTROL (ID AUTHORIZATION AND BADGING), ACCESS CONTROL (SEARCH), ACCESS CONTROL (ESCORTING), ACCESS CONTROL (VITAL AREA), ALARM STATIONS, DETECTION AIDS, ASSESSMENT AIDS, COMMUNICATIONS, AND LOCKS AND KEYS. THE INSPECTION INVOLVED 75 INSPECTOR-HOURS ON SITE BY 2 NRC INSPECTORS. THE INSPECTION WAS BEGUN DURING REGULAR HOURS; 19 INSPECTOR-HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE 15 AREAS EXAMINED DURING THE INSPECTION EXCEPT FOR THE FOLLOWING 4 ITEMS: (1) SECURITY ORGANIZATION - FAILURE TO ESTABLISH, MAINTAIN AND FOLLOW ADEQUATE WRITTEN PROCEDURES (INFRACTION); (2) PHYSICAL BARRIERS (VITAL AREA) - FAILURE TO MAINTAIN A VITAL AREA BARRIER AS COMMITTED TO IN THE SECURITY PLAN (INFRACTION); (3) ACCESS CONTROL (SEARCH) - FAILURE TO PROPERLY SEARCH PERSONNEL (INFRACTION); (4) ACCESS CONTROL (VITAL AREA) - FAILURE TO CONTROL ALL POINTS OF PERSONNEL ACCESS INTO VITAL AREAS (INFRACTION); (5) SECURITY ORGANIZATION - COMMITMENTS TO TRAIN AND QUALIFY GUARDS TO MEET OR EXCEED THE REQUIREMENTS OF REGULATORY GUIDE 5.20; AND (6) PHYSICAL BARRIERS (VITAL AREA) - DESIGN OF BARRIERS AND LOCKING HARDWARE.

INSPECTION MARCH 24-27 (80-05): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 44 INSPECTOR-HOURS ON SITE AND AT THE CORPORATE OFFICE IN THE AREA OF TECHNICAL SPECIFICATION SURVEILLANCE REQUIREMENTS, ATTENDANCE AT THE SHORT TERM LESSONS LEARNED REVIEW CONDUCTED BY THE DIVISION OF OPERATING REACTORS, AND ATTENDANCE AT A REVIEW OF 10 CFR 50 PART 21 REPORTING REQUIREMENTS. OF THE THREE AREAS INSPECTED, NO ITEM OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 8-10 (80-09): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 16 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSTALLED EQUIPMENT REVIEW WITH RESPECT TO IE BULLETIN 79-01B. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 1-3 (80-08): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 24 INSPECTOR-HOURS ON SITE IN THE AREAS OF PREPARATION FOR REFUELING AND REFUELING ACTIVITIES IN PREPARATION FOR FUEL CYCLE FOUR. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN THE OTHER AREA (INFRACTION - FAILURE TO HAVE A FLUX MONITOR INDICATION AUDIBLE IN CONTAINMENT DURING CORE ALTERATIONS).

AN ENFORCEMENT CONFERENCE WAS CONDUCTED WITH LICENSEE MANAGEMENT ON APRIL 14 (80-11), TO DISCUSS THE FINDINGS OF THE SECURITY INSPECTION JANUARY 28 - FEBRUARY 1, 1980 AND TO REVIEW PREVIOUS ENFORCEMENT HISTORY.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT

RE-ANALYSIS AND REVIEW OF SEISMIC DESIGN DEFICIENCIES ARE CONTINUING.

FACILITY ITEMS (PLANS AND PROCEDURES):

NONE.

MANAGERIAL ITEMS:

NONE.

PLANT STATUS:

UNIT IS CURRENTLY SHUTDOWN FOR MAIN TURBINE INSPECTION AND CORRECTION OF SEISMIC DESIGN ERRORS.

♦ LAST IE SITE INSPECTION DATE: MAY 2, 1980

♦ INSPECTION REPORT NO: 50-280/80-19

SUMMARY

INSPECTION SUMMARY

♦ INSPECTION MARCH 10-14 (80-04): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 30 INSPECTOR-HOURS ON SITE IN THE AREAS OF COORDINATION WITH OUTSIDE SUPPORT AGENCIES; EMERGENCY FACILITIES, EQUIPMENT AND PROCEDURES; EMERGENCY ORGANIZATION; EMERGENCY TRAINING; EMERGENCY PLANNING AUDITS; EMERGENCY DRILLS; FOLLOWUP ON PREVIOUSLY IDENTIFIED INSPECTION FINDINGS AND FOLLOWUP ON IE BULLETINS. OF THE EIGHT AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SEVEN AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO CONDUCT EMERGENCY RETRAINING FOR DESIGNATED EMERGENCY DIRECTORS).

INSPECTION MARCH 4-7 (80-06): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 24 INSPECTOR-HOURS ON SITE IN THE AREA OF SMALL BREAK LOCA, EMERGENCY PROCEDURES, TRAINING AND OPERATOR KNOWLEDGE. WITHIN THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 15-18 (80-08): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 15 INSPECTOR-HOURS ON SITE IN THE AREAS OF FIRE PROTECTION/PREVENTION. OF THE AREAS INSPECTED, NO ITEMS OF DEVIATIONS WERE IDENTIFIED. HOWEVER, TWO ITEMS OF NONCOMPLIANCE WERE FOUND (INFRACTION - NONFUNCTIONAL FIRE DOOR BETWEEN UNIT 2 EMERGENCY SWITCHGEAR ROOM AND UNIT 2 SERVICE BUILDING CABLE VAULT; AND, INFRACTION - FAILURE TO IMPLEMENT FIRE PROTECTION PROCEDURES FOR SPECIAL PROCESSES INVOLVING IGNITION SOURCES).

INSPECTION APRIL 7-9 (80-09): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 16 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONSTRUCTION STATUS, LICENSEE ACTION ON PREVIOUS INSPECTION FINDINGS, AND REVIEW OF QUALITY RECORDS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 27 - MARCH 4 AND MARCH 10 - APRIL 4 (80-13): THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED 65 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS AND OPERATING RECORDS, PLANT MODIFICATION AND MAINTENANCE, FOLLOWUP OF IE BULLETINS, PLANT SECURITY, AND PREVIOUSLY IDENTIFIED ITEMS. OF THE FIVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE FOUND IN THREE AREAS; ONE APPARENT DEVIATION WAS FOUND IN THE PLANT MODIFICATION AREA (THE FACILITY NOT BUILT AS DESCRIBED IN FSAR) AND ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN THE AREA OF PLANT SECURITY (2.790).

INSPECTION APRIL 15-18 (80-15): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 15 INSPECTOR-HOURS ON SITE IN THE AREAS OF RECORDS PROGRAM IMPLEMENTATION AND TECHNICAL WORKING SESSION WITH LICENSEE AND NRR CONCERNING THE INSERVICE TESTING, PUMP AND VALVE PROGRAM. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-34 /01T-0	12/07/79	12/20/79	14 DAY LER	NONCONSERVATISM IN DESIGN OF CONTROL CIRCUITRY FOR THE CONTAINMENT ISOLATION VALVES FROM THE MAIN AIR EJECTOR DISCHARGE.

OF THE AREAS INSPECTED, NO ITEMS OF DEVIATIONS WERE IDENTIFIED. HOWEVER, TWO ITEMS OF NONCOMPLIANCE WERE FOUND (INFRACTION - NONFUNCTIONAL FIRE DOOR BETWEEN UNIT 2 EMERGENCY SWITCHGEAR ROOM AND UNIT 2 SERVICE BUILDING CABLE VAULT; AND, INFRACTION - FAILURE TO IMPLEMENT FIRE PROTECTION PROCEDURES FOR SPECIAL PROCESSES INVOLVING IGNITION SOURCES).

INSPECTION APRIL 7-9 (80-10): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 16 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONSTRUCTION STATUS, LICENSEE ACTION ON PREVIOUS INSPECTION FINDINGS, AND REVIEW OF QUALITY RECORDS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 27 - MARCH 4 AND MARCH 10 - APRIL 4 (80-14): THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED 65 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS AND OPERATING RECORDS, PLANT MODIFICATION AND MAINTENANCE, FOLLOWUP OF IE BULLETINS, PLANT SECURITY, AND PREVIOUSLY IDENTIFIED ITEMS. OF THE FIVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE FOUND IN THREE AREAS; ONE APPARENT DEVIATION WAS FOUND IN THE PLANT MODIFICATION AREA (THE FACILITY NOT BUILT AS DESCRIBED IN FSAR) AND ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN THE AREA OF PLANT SECURITY (2.790).

INSPECTION APRIL 15-18 (80-16): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 15 INSPECTOR-HOURS ON SITE IN THE AREAS OF RECORDS PROGRAM IMPLEMENTATION AND TECHNICAL WORKING SESSION WITH LICENSEE AND NRR CONCERNING THE INSERVICE TESTING, PUMP AND VALVE PROGRAM. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

SECTION 2.1 OF THE TMI UNIT 1, ETS, LIMITING CONDITIONS FOR OPERATION REQUIRES, IN PART, THAT DURING THE PERIOD BETWEEN OCTOBER 1 AND MARCH 31, THE PLANT DISCHARGE TEMPERATURES BE NO GREATER THAN 12 DEGREES F ABOVE INLET TEMPERATURE. CONTRARY TO THESE REQUIREMENTS ON DECEMBER 4, 1978 THE PLANT DISCHARGE TEMPERATURE WAS GREATER THAN 12 DEGREES F ABOVE THE PLANT INLET TEMPERATURE.
(7923 DEFICIENCY)

SECTION 4.4.A AND TABLE 3 OF THE UNIT 1 ETS REQUIRE IN PART, THAT MILK SAMPLES BE COLLECTED AND ANALYZED FROM 4 INDICATOR AND 1 BACKGROUND STATION AT MONTHLY INTERVALS DURING THE GRAZING SEASON. CONTRARY TO THESE REQUIREMENTS, MILK SAMPLES WERE NOT COLLECTED AND ANALYZED AT THE REQUIRED FREQUENCIES AND LOCATIONS FOR THE INTERVALS INCLUDING: TM-M-4B1 MARCH, APRIL AND DURING THE WEEK OF MAY 17, 1978; TM-M-5B1 MARCH, APRIL, AND DURING THE WEEK OF MAY 17, 1978; TM-M-14C1 FEBRUARY, AND DURING THE WEEK OF JUNE 7, 1978; TM-M-2G1 DURING THE WEEK OF JUNE 7, 1978; TM-MG-1B1 DURING THE WEEK OF MAY 17, 1978. THIS RESULTED IN FEWER THAN THE REQUIRED NUMBER OF MILK SAMPLES BEING COLLECTED AND ANALYZED DURING THESE TIME INTERVALS.
(7923 DEFICIENCY)

SECTION 4.4.A AND TABLE 3 OF THE UNIT 1 ETS REQUIRE, IN PART, THAT ALL SAMPLES BE ANALYZED WITH SUFFICIENT SENSITIVITIES TO MEET THE MINIMUM SPECIFIED ANALYTICAL SENSITIVITIES. CONTRARY TO THESE REQUIREMENTS, AIR SAMPLES WERE NOT ANALYZED WITH SUFFICIENT ANALYTICAL SENSITIVITY TO MEET THE SPECIFIED MINIMUM SENSITIVITIES FOR I-131 AT THE FOLLOWING LOCATIONS ON SEVERAL OCCASIONS INCLUDING: TM-AI-1S2 FEBRUARY 1-9, MARCH 1-15, JUNE 21-29, AND JULY 6-12, 1978; TM-AI-5A1 FEBRUARY 1-9, 15-22, MARCH 1-5, MAY 25-31, JUNE 21, 29, JULY 6-12, AND NOVEMBER 8-15, 1978; TM-AI-8C1 FEBRUARY 1-9, FEBRUARY 15 - MARCH 15, JUNE 7-14, JUNE 21-JULY 12, AND JULY 26 - AUGUST 2, 1978; TM-AI-15G1 FEBRUARY 1-9, 15-22, MARCH 1-9, MAY 3-11, JUNE 7-14, JUNE 29-JULY 12, AND OCTOBER 11-18, 1978.
(7923 DEFICIENCY)

SECTION 4.4.A AND TABLE 3 OF THE UNIT 1 ENVIRONMENTAL TECHNICAL SPECIFICATIONS REQUIRE, IN PART, THAT SPECIFIED NUMBERS OF SAMPLES OF AIR PARTICULATES AND AIR IODINES BE COLLECTED AND ANALYZED ON A WEEKLY BASIS. (1) CONTRARY TO THESE REQUIREMENTS, THE FOLLOWING ENVIRONMENTAL AIR PARTICULATES SAMPLES WERE NOT COLLECTED AND ANALYZED WEEKLY FOR GROSS BETA ACTIVITY: TM-AP-7F1 JANUARY 11 - FEBRUARY 22, 1978; TM-AP-1S2 APRIL 13 - MAY 31, 1978; TM-AP-7F1 AUGUST 25 - SEPTEMBER 1, 1979; TM-AP-7F1 SEPTEMBER 8 - SEPTEMBER 29, 1979; TM-AP-12B1 SEPTEMBER 29 - OCTOBER 20, 1979. THESE FAILURES RESULTED IN FEWER THAN THE REQUIRED NUMBER OF SAMPLES BEING COLLECTED AND ANALYZED FOR THESE TIME INTERVALS. (2) CONTRARY TO THESE REQUIREMENTS ENVIRONMENTAL AIR IODINE SAMPLES WERE NOT COLLECTED AND ANALYZED WEEKLY AT LOCATION TM-AI-1S2 FROM APRIL 13 TO MAY 31, 1978. THIS RESULTED IN FEWER THAN THE REQUIRED NUMBER OF SAMPLES BEING COLLECTED DURING THIS TIME INTERVAL.
(7923 INFRACTION)

SECTION 4.4.1 AND TABLE 3 OF THE UNIT 1 ETS REQUIRE, IN PART, THAT WATER SAMPLES BE COLLECTED AT THE CITY OF COLUMBIA AT THE SPECIFIED FREQUENCIES AND THE SPECIFIED ANALYSES BE PERFORMED. CONTRARY TO THESE REQUIREMENTS, WATER SAMPLES FROM THE CITY OF COLUMBIA WERE NOT COLLECTED AND ANALYZED AT THE SPECIFIED FREQUENCIES FROM JANUARY 19 THROUGH APRIL 13, 1978. THIS RESULTED IN FEWER THAN THE REQUIRED NUMBER OF SAMPLES BEING COLLECTED AND ANALYZED DURING THIS TIME INTERVAL.
(7923 DEFICIENCY)

SECTION 5.7.1 OF THE UNIT 1 ETS REQUIRES IN PART, THAT RECORDS DEMONSTRATING COMPLIANCE WITH THE LIMITING CONDITIONS FOR OPERATION IN SECTION 2 OF THE ETS, INCLUDING PLANT DELTA T RECORDS, BE RETAINED FOR THE LIFE OF THE PLANT. CONTRARY TO THIS REQUIREMENT, RECORDS OF DELTA T MEASUREMENTS WERE NOT RETAINED FOR FEBRUARY 19, 1979. SECTION 5.8.6 OF THE UNIT 2 ETS REQUIRES, IN PART, THAT RECORDS OF ALL DATA FROM ENVIRONMENTAL MONITORING, SURVEILLANCE AND STUDY ACTIVITIES REQUIRED BY THESE ETS SHALL BE MADE AND RETAINED THROUGHOUT THE TERM OF THE OPERATING LICENSE. CONTRARY TO THIS REQUIREMENT, RECORDS OF PLANT DELTA T, INFLUENT AND EFFLUENT TEMPERATURES, MONITORING REQUIRED BY THE UNIT 2 ETS, WERE NOT RETAINED FOR MARCH 20, 21, 22, 23 AND 24, 1979, DURING WHICH TIME THE UNIT 2 CONTROL ROOM RECORDER WAS OFF-SCALE.
(7923 DEFICIENCY)

SEE CONTINUATION PAGE

ENFORCEMENT STATUS

SECTION 5.3 OF THE TMI UNIT 1 ETS REQUIRES, IN PART, THAT INDEPENDENT AUDIT AND REVIEW FUNCTIONS FOR ENVIRONMENTAL MATTERS WILL BE PERFORMED UNDER THE DIRECTION AND CONTROL OF THE MANAGER-GENERATION ENGINEERING. INDEPENDENT REVIEW OF ENVIRONMENTAL MATTERS AND AUDITING OF STATION ACTIVITIES RELATING TO THESE ENVIRONMENTAL TECHNICAL SPECIFICATIONS WILL BE CONDUCTED BY THE RADIATION SAFETY AND ENVIRONMENTAL ENGINEERING SECTION, REPORTING TO THE MANAGER-GENERATION ENGINEERING. THEIR REVIEW WILL BE AUDITED BY OR UNDER THE DIRECTION OF THE MANAGER-GENERATION ENGINEERING. THESE AUDITS AND REVIEWS WILL ENCOMPASS, AMONG OTHER THINGS, THE RESULTS OF THE ENVIRONMENTAL MONITORING PROGRAMS PRIOR TO THEIR SUBMITTAL IN EACH ANNUAL ENVIRONMENTAL MONITORING REPORT. CONTRARY TO THESE REQUIREMENTS, THE RESULTS OF THE ENVIRONMENTAL MONITORING PROGRAMS REPORTED TO THE NRC IN THE 1978 ANNUAL ENVIRONMENTAL MONITORING REPORTS WERE NOT AUDITED.
(7923 INFRACTION)

SECTION 5.5 OF THE ETS FOR TMI UNIT 1 REQUIRES THAT, "DETAILED WRITTEN PROCEDURES, INCLUDING APPLICABLE CHECKLISTS AND INSTRUCTIONS, SHALL BE PREPARED AND FOLLOWED TO IMPLEMENT THE ENVIRONMENTAL TECHNICAL SPECIFICATIONS. PROCEDURES SHALL INCLUDE SAMPLING, DATA RECORDING AND STORAGE, INSTRUMENT CALIBRATION, MEASUREMENTS AND ANALYSES, AND ACTIONS TO BE TAKEN WHEN LIMITS ARE EXCEEDED." (1) THE UNIT 1 RADIOLOGICAL ENVIRONMENTAL MONITORING PROGRAM (REMP) SURVEILLANCE PROCEDURE GP 1402, REV. 0, DATED NOVEMBER 15, 1977, REQUIRES IN PART, THAT REMP SAMPLE COLLECTION SHEETS BE COMPLETED AND DISTRIBUTED AS SPECIFIED IN APPENDIX A OF THAT PROCEDURE. CONTRARY TO THESE REQUIREMENTS, THE REMP SAMPLE COLLECTION, SHEETS DESCRIBED IN THE REMP SURVEILLANCE PROCEDURE GP 1402, REV. 0, WERE NOT COMPLETED AND DISTRIBUTED AS REQUIRED BY APPENDIX A OF THE PROCEDURE FROM APRIL 1979 TO THE DATES OF INSPECTION. (2) UNIT 1 PROCEDURE NO. IC39 REQUIRES ANNUAL CALIBRATION OF THE PLANT INTAKE/DISCHARGE TEMPERATURE MONITORING SYSTEM. CONTRARY TO THESE REQUIREMENTS, THE PLANT INTAKE/DISCHARGE TEMPERATURE MONITORING SYSTEM WAS NOT CALIBRATED DURING 1978 AND 1979 AS REQUIRED.
(7923 INFRACTION)

SECTION 5.5 OF THE UNIT 1 ETS REQUIRES, IN PART, THAT DETAILED WRITTEN PROCEDURES, INCLUDING APPLICABLE CHECKLISTS AND INSTRUCTIONS, SHALL BE PREPARED AND FOLLOWED TO IMPLEMENT THE ENVIRONMENTAL TECHNICAL SPECIFICATIONS. PROCEDURES SHALL INCLUDE SAMPLING, DATA RECORDING AND STORAGE, INSTRUMENT CALIBRATION, MEASUREMENTS AND ANALYSES, AND ACTIONS TO BE TAKEN WHEN LIMITS ARE EXCEEDED. (1) SECTION 2.2 OF THE UNIT 1 ETS REQUIRES, IN PART, THAT A DETERMINATION OF THE PH OF THE CONTENTS OF EACH TANK OF NEUTRALIZED REGENERANT WASTES BE MADE PRIOR TO RELEASE, USING INSTALLED INSTRUMENTATION; THAT ALL NECESSARY ADJUSTMENTS TO MEET THE SPECIFICATION BE MADE PRIOR TO THE INITIATION OF THE RELEASE; AND THAT IF THE INSTALLED INSTRUMENTATION IS OUT OF SERVICE, THE NECESSARY ANALYSES BE PERFORMED USING LABORATORY INSTRUMENTATION PRIOR TO INITIATING THE DISCHARGE. AN ANALYSIS FOR PH IS REQUIRED TO BE PERFORMED ON A SAMPLE TAKEN FROM THE PLANT RIVER WATER DISCHARGE DURING THE RELEASE OF EACH TANK OF REGENERANT WASTES, OR AT WEEKLY INTERVALS AS A MINIMUM FREQUENCY. CONTRARY TO THESE REQUIREMENTS, AS OF THE DATES OF INSPECTION, THE REGENERANT NEUTRALIZING TANK AND THE PLANT RIVER WATER DISCHARGE SAMPLING PROCEDURES WERE NOT PREPARED AS REQUIRED. (2) SECT 2.1.6 OF THE UNIT 1 ETS REQUIRES, IN PART, THAT IF THE UNIT 1 CONTROL ROOM DELTA T CHART RECORDER IS OUT OF SERVICE, THE PLANT INLET AND DISCHARGE TEMPERATURES BE OBTAINED FROM THE RECORDERS LOCATED IN THE MECHANICAL DRAFT COOLING TOWERS (MDCT). SECTIONS 5.5.1 AND 5.5.2 OF THE UNIT 1 ETS REQUIRE IN PART, THAT DETAILED WRITTEN PROCEDURES BE PREPARED AND FOLLOWED TO ENSURE COMPLIANCE WITH THE LIMITING CONDITIONS FOR OPERATION, SECTION 2 OF THE ETS, INCLUDING PROCEDURES TO BE FOLLOWED IN THE EVENT THAT THE UNIT 1 CONTROL ROOM PLANT DELTA T CHART RECORDER IS OUT OF SERVICE. CONTRARY TO THESE REQUIREMENTS, AS OF THE DATES OF THIS INSPECTION, WRITTEN PROCEDURES DETAILING ACTIONS TO BE TAKEN WHEN THE CONTROL ROOM DELTA T RECORDER IS OUT OF SERVICE WERE NOT PREPARED AND FOLLOWED AS REQUIRED.
(7923 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS:

- Shutdown by NRC order pending completion of modifications and other actions related to the TMI-2 accident.

- LAST IE SITE INSPECTION DATE: 4/30/80

- INSPECTION REPORT NO: 50-289/80-09

SUMMARY

INSPECTION SUMMARY

- 50-289/79-23 - Nov 6-9, 15-16, 27-28: Special, unannounced inspection of the environmental monitoring programs for the pre- and post March 1979 TMI-2 accident periods. The inspection included the management controls for the environmental monitoring programs; implementation of the environmental monitoring programs - radiological; implementation of the environmental monitoring programs - biological/ecological; and nonradioactive effluent release rates and limits. The inspection involved 60 hours onsite by two region-based NRC inspectors. Noncompliances: Nine (failure to perform the required audits of the environmental monitoring programs; failure to follow procedures; failure to collect and analyze required drinking water samples; failure to collect and analyze environmental air samples; failure to collect and analyze required milk samples; failure to meet the required detection sensitivities for I-131 in air and water samples; exceeding the plant delta-T limit; failure to maintain plant records; failure to have adequate procedures).

- 50-289/79-24 - Nov 28 - Jan 4: Special inspection by NRC/TMI staff of: plant operations including shift logs and operating records, plant tours and status meetings. The inspection included shift coverage of selected activities in progress including shutdown evolutions involving the movement or processing of radioactive material. Noncompliances: None.

- 50-289/80-01 - Jan 5-31: Special inspection by NRC/TMI staff of licensee action on previous inspection findings and plant operations including shift activities as monitored by NRC shift inspectors. The inspection included day shift coverage with selected backshift coverage by NRC shift radiation specialists. Noncompliances: None.

INSPECTION STATUS

ENFORCEMENT STATUS

SECTION 3.2 AND TABLE 3.2-2 OF THE UNIT 2 ETS REQUIRE, IN PART, THAT MILK SAMPLES BE COLLECTED AND ANALYZED FROM 3 INDICATOR AND 1 BACKGROUND STATION AT SEMI-MONTHLY INTERVALS DURING THE GRAZING SEASON AND MONTHLY INTERVALS AT ALL OTHER TIMES. CONTRARY TO THESE REQUIREMENTS, MILK SAMPLES WERE NOT COLLECTED AND ANALYZED AT THE REQUIRED FREQUENCIES AND LOCATIONS FOR THE INTERVALS INCLUDING: TM-M-4B1 MARCH, APRIL AND DURING THE WEEK OF MAY 17, 1978; TM-M-5B1 MARCH, APRIL, AND DURING THE WEEK OF MAY 17, 1978; TM-M-14C1 FEBRUARY, AND DURING THE WEEK OF JUNE 7, 1978; TM-M-2G1 DURING THE WEEK OF JUNE 7, 1978; TM-MG-1B1 DURING THE WEEK OF MAY 17, 1978. THIS RESULTED IN FEWER THAN THE REQUIRED NUMBER OF MILK SAMPLES BEING COLLECTED AND ANALYZED DURING THESE TIME INTERVALS.
(7928 DEFICIENCY)

SECTION 3.2 AND TABLE 3.2-3 OF THE UNIT 2 ETS REQUIRE, IN PART, THAT ALL SAMPLES BE ANALYZED WITH SUFFICIENT SENSITIVITIES TO MEET THE MINIMUM SPECIFIED ANALYTICAL SENSITIVITIES. (1) CONTRARY TO THESE REQUIREMENTS, AIR SAMPLES WERE NOT ANALYZED WITH SUFFICIENT ANALYTICAL SENSITIVITY TO MEET THE SPECIFIED MINIMUM SENSITIVITIES FOR I-131 AT THE FOLLOWING LOCATIONS ON SEVERAL OCCASIONS INCLUDING: TM-AI-152 FEBRUARY 1-9, MARCH 1-15, JUNE 21-29, AND JULY 6-12, 1978; TM-AI-5A1 FEBRUARY 1-9, 15-22, MARCH 1-5, MAY 25-31, JUNE 21-29, JULY 6-12, AND NOVEMBER 8-15, 1978; TM-AI-8C1 FEBRUARY 1-9, FEBRUARY 15-MARCH 15, JUNE 7-14, JUNE 21-JULY 12, AND JULY 26-AUGUST 2, 1978; TM-AI-15G1 FEBRUARY 1-9, 15-22, MARCH 1-8, MAY 3-11, JUNE 7-14, JUNE 29-JULY 12, AND OCTOBER 11-18, 1978. (2) CONTRARY TO THESE REQUIREMENTS FOR UNIT 2, DRINKING WATER SAMPLES WERE NOT ANALYZED WITH SUFFICIENT ANALYTICAL SENSITIVITY TO MEET THE SPECIFIED MINIMUM SENSITIVITY FOR I-131 DURING MAY AND JUNE 1978.
(7928 DEFICIENCY)

SECTION 3.2 AND TABLE 3.2-2 OF THE UNIT 2 ETS REQUIRE, IN PART, THAT SPECIFIED NUMBERS OF SAMPLES OF AIR PARTICULATES AND AIR IODINES BE COLLECTED AND ANALYZED ON A WEEKLY BASIS. (1) CONTRARY TO THESE REQUIREMENTS, THE FOLLOWING ENVIRONMENTAL AIR PARTICULATES SAMPLES WERE NOT COLLECTED AND ANALYZED WEEKLY FOR GROSS BETA ACTIVITY: TM-AP-7F1 JANUARY 11 - FEBRUARY 22, 1978; TM-AP-152 APRIL 13-MAY 31, 1978; TM-AP-7F1 AUGUST 25-SEPTEMBER 1, 1979;TM-AP-7F1 SEPTEMBER 8-SEPTEMBER 29, 1979; TM-AP-12B1 SEPTEMBER 29 - OCTOBER 20, 1979. THESE FAILURES RESULTED IN FEWER THAN THE REQUIRED NUMBER OF SAMPLES BEING COLLECTED AND ANALYZED FOR THESE TIME INTERVALS. (2) CONTRARY TO THESE REQUIREMENTS ENVIRONMENTAL AIR IODINE SAMPLES WERE NOT COLLECTED AND ANALYZED WEEKLY AT LOCATION TM-AI-152 FROM APRIL 13 TO MAY 31, 1978. THIS RESULTED IN FEWER THAN THE REQUIRED NUMBER OF SAMPLES BEING COLLECTED DURING THIS TIME INTERVAL.
(7928 INFRACTION)

SECTION 3.2 AND TABLE 3.2-2 OF THE UNIT 2 ETS REQUIRE, IN PART, THAT WATER SAMPLES BE COLLECTED AT THE CITY OF COLUMBIA AT THE SPECIFIED FREQUENCIES AND THE SPECIFIED ANALYSES BE PERFORMED. CONTRARY TO THESE REQUIREMENTS, WATER SAMPLES FROM THE CITY OF COLUMBIA WERE NOT COLLECTED AND ANALYZED AT THE SPECIFIED FREQUENCIES FROM JANUARY 19 THROUGH APRIL 13, 1978. THIS RESULTED IN FEWER THAN THE REQUIRED NUMBER OF SAMPLES BEING COLLECTED AND ANALYZED DURING THIS TIME INTERVAL.
(7928 DEFICIENCY)

SECTION 5.8.6 OF THE UNIT 2 ETS REQUIRES, IN PART, THAT RECORDS OF ALL DATA FROM ENVIRONMENTAL MONITORING, SURVEILLANCE AND STUDY ACTIVITIES REQUIRED BY THESE ETS SHALL BE MADE AND RETAINED THROUGHOUT THE TERM OF THE OPERATING LICENSE. CONTRARY TO THIS REQUIREMENT, RECORDS OF PLANT DELTA T, INFLUENT AND EFFLUENT TEMPERATURES, MONITORING REQUIRED BY THE UNIT 2 ETS, WERE NOT RETAINED FOR MARCH 20, 21, 22, 23, AND 24, 1979, DURING WHICH TIME THE UNIT 2 CONTROL ROOM RECORDER WAS OFF-SCALE.
(7928 DEFICIENCY)

LICENSE STATUS

By Order for Modification of License dated July 20, 1979, the licensee's authority to operate the facility was suspended and the licensee's authority was limited to maintenance of the facility in the present shutdown cooling mode (44 F.R. 45271).

SEE CONTINUATION PAGE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
79-015/ 13L	03/28/79	01/15/80	While investigating leakage of the radwaste system station personnel received radiation doses in excess of quarterly limits for whole body dose
79-016/ 03L	04/28/79	01/15/80	Due to equipment failure the fire protection system was down to one operable fire pump for a period of 3 hours
79-017/ 12L	03/29/79	01/15/80	While manipulating valves and handling containers of coolant samples station personnel received extremity exposures in excess of 10 CFR 20 limits
79-018/ 12L	08/28/79	01/15/80	While attempting to isolate a leak from the makeup system station personnel received whole body and extremity exposures in excess of 10 CFR 20 limits
79-020/ 04L	11/01/79	12/21/79	Environmental studies required by Technical Specifications sections 5.5.4.D and 5.7.1 were terminated without notification to NRC
79-021/ 03L	12/05/79	01/15/80	Diesel generator DF-X-1B tripped 20 seconds after a manual start due to low lube oil pressure, cause was attributed to low lube oil level
79-022/ 03L	12/19/79	01/15/80	During repair of NR-P-10 a damaged coupling was discovered, the cause was attributed to badly worn bearings
80-001/ 99X	01/26/80	02/22/80	Generator auxiliaries supply breaker found tripped during cold shutdown operations (Special report)
80-002/ 99X	01/29/80	02/28/80	Emergency diesel generator failed to start due to mechanical failure of speed switch/tachometer (Special report)
80-003/ 99X	01/31/80	03/01/80	Emergency diesel generator tripped during surveillance due to short timing setpoint error not allowing lube oil pressure to reach operating setpoint (Special report)
80-004/ 03L	02/11/80	03/11/80	Failure of test connection on makeup pump (MU-P-1B) resulting in liquid and gaseous releases
80-005/ 01L	02/18/80	03/19/80	One diesel generator out of service when recovery technical specifications became effective. Both diesels required under new technical specifications.
80-006/ 01L	02/15/80	03/19/80	Boric acid mix tank out of specification when recovery tech specs became effective. Greater minimum inventory required under new tech specs
80-007/ 01L	02/22/80	03/24/80	Unavailability of one aux bldg exhaust due to maintenance when interim recovery TS became effective
80-008/ 01L	02/20/80	03/21/80	Inadvertent removal from service of the nuclear services river water pump providing cooling water for the only operable emergency diesel generator
80-009/ 03L	03/05/80	04/05/80	Emergency diesel generator "B" could not be loaded due to incorrect switch alignment. EDG "A" was down for annual maintenance
80-010/ 01L	03/14/80	03/17/80	Failure of containment outer door seals to reseat
80-011/ 99X	03/21/80	03/27/80	Anomaly in narrow range pressure instrument-rosemount 1152 pressure transmitters (Special report)

ENFORCEMENT STATUS

SECTION 5.3 OF THE TMI UNIT 2 ETS REQUIRES, IN PART, THAT INDEPENDENT AUDIT AND REVIEW FUNCTIONS FOR ENVIRONMENTAL MATTERS WILL BE PERFORMED UNDER THE DIRECTION AND CONTROL OF THE MANAGER-GENERATION ENGINEERING. INDEPENDENT REVIEW OF ENVIRONMENTAL MATTERS AND AUDITING OF STATION ACTIVITIES RELATING TO THESE ENVIRONMENTAL TECHNICAL SPECIFICATIONS WILL BE CONDUCTED BY THE RADIATION SAFETY AND ENVIRONMENTAL ENGINEERING SECTION, REPORTING TO THE MANAGER-GENERATION ENGINEERING. THEIR REVIEW WILL BE AUDITED BY OR UNDER THE DIRECTION OF THE MANAGER-GENERATION ENGINEERING. THESE AUDITS AND REVIEWS WILL ENCOMPASS, AMONG OTHER THINGS, THE RESULTS OF THE ENVIRONMENTAL MONITORING PROGRAMS PRIOR TO THEIR SUBMITTAL IN EACH ANNUAL ENVIRONMENTAL MONITORING REPORT. CONTRARY TO THESE REQUIREMENTS, THE RESULTS OF THE ENVIRONMENTAL MONITORING PROGRAMS REPORTED TO THE NRC IN THE 1978 ANNUAL ENVIRONMENTAL MONITORING REPORTS WERE NOT AUDITED.
(7928 INFRACTION)

SECTION 3.1.1 OF THE ETS, UNIT 2, REQUIRES, IN PART, THAT A NONROUTINE REPORT, AS SPECIFIED IN SUBSECTION 5.6.2.B, SHALL BE MADE IF THE THERMAL CHARACTERISTICS OF THE DISCHARGE FROM OUTFALL SERIAL NUMBER 001 FAIL TO COMPLY WITH RELEVANT LIMITATIONS PRESCRIBED BY THE COMMONWEALTH OF PENNSYLVANIA AND THE U.S. ENVIRONMENTAL PROTECTION AGENCY IN THE CERTIFICATES AND PERMITS ISSUED TO THE LICENSEE PURSUANT TO THE PROVISION OF SECTION 401 AND 402 OF PL 92-500, AS CITED IN SECTION 5.4 OF THE ETS. CONTRARY TO THESE REQUIREMENTS, ON MARCH 14, 1979 BETWEEN 11:45 A.M. AND 12:40 P.M., THE STATION DELTA T EXCEEDED 12 DEGREES F, THE SPECIFIED THERMAL DISCHARGE DELTA T LIMIT, AND THIS OCCURRENCE WAS NOT REPORTED TO THE NRC.
(7928 INFRACTION)

SECTION 5.5 OF THE UNIT 2 ETS REQUIRES, IN PART, THAT DETAILED WRITTEN PROCEDURES, INCLUDING APPLICABLE CHECKLISTS AND INSTRUCTIONS, SHALL BE PREPARED AND FOLLOWED TO IMPLEMENT THE ENVIRONMENTAL TECHNICAL SPECIFICATIONS. PROCEDURES SHALL INCLUDE SAMPLING, DATA RECORDING AND STORAGE, INSTRUMENT CALIBRATION, MEASUREMENTS AND ANALYSES, AND ACTIONS TO BE TAKEN WHEN LIMITS ARE EXCEEDED. SECTION 3.1.1.A OF THE UNIT 2 ETS REQUIRES, IN PART, THAT DURING NORMAL OPERATIONS, THE CONTENTS OF THE HOLDING TANKS FOR THE DEMINERALIZER AND CONDENSATE POLISHER REGENERATION SOLUTIONS SHALL BE SAMPLED PRIOR TO BEING DISCHARGED AND THE PH MEASURED IN ACCORDANCE WITH THE PROCEDURES PREPARED BY THE LICENSEE PER SECTION 5.5. CONTRARY TO THESE REQUIREMENTS, AS OF THE DATES OF THIS INSPECTION, PROCEDURES FOR SAMPLING THE HOLDING TANKS FOR DEMINERALIZER AND CONDENSATE POLISHER REGENERATION WERE NOT PREPARED AND FOLLOWED AS REQUIRED.
(7928 INFRACTION)

SECTION 3.1.2.A(1)(C) OF THE UNIT 2 ETS REQUIRES THAT ICHTHYOFAUNA BE SAMPLED TO ESTABLISH POPULATION ESTIMATES IN SPECIFIC AREAS AND TO DETECT AND ASSESS THE SIGNIFICANCE OF CHANGES IN SPECIES COMPOSITION, RELATIVE ABUNDANCE, SEASONAL AND SPATIAL DISTRIBUTION, CONDITION, AND DIVERSITY OF SPECIES AS RELATED TO TMINS OPERATION.... THIS MONITORING PROGRAM SHALL COMMENCE AT INITIAL ATTAINMENT OF NORMAL OPERATION OF UNIT 2 AND CONTINUE FOR A PERIOD OF AT LEAST THREE (3) YEARS. CONTRARY TO THE ABOVE, THE REQUIRED FISH STUDIES WERE NOT PERFORMED DURING THE PERIOD FROM APRIL 1, 1979 THROUGH NOVEMBER 26, 1979.
(7928 INFRACTION)

SECTION 5.5 OF THE ETS FOR TMI UNIT 2 REQUIRES THAT, "DETAILED WRITTEN PROCEDURES, INCLUDING APPLICABLE CHECKLISTS AND INSTRUCTIONS, SHALL BE PREPARED AND FOLLOWED TO IMPLEMENT THE ENVIRONMENTAL TECHNICAL SPECIFICATIONS. PROCEDURES SHALL INCLUDE SAMPLING, DATA RECORDINGS AND STORAGE, INSTRUMENT CALIBRATION, MEASUREMENTS AND ANALYSES, AND ACTIONS TO BE TAKEN WHEN LIMITS ARE EXCEEDED." (1) THE UNIT 2 RADIOLOGICAL ENVIRONMENTAL MONITORING PROGRAM (REMP) SURVEILLANCE PROCEDURE GP 1402, REV. 0, DATED NOVEMBER 15, 1977, REQUIRES IN PART, THAT REMP SAMPLE COLLECTION SHEETS BE COMPLETED AND DISTRIBUTED AS SPECIFIED IN APPENDIX A OF THAT PROCEDURE. CONTRARY TO THESE REQUIREMENTS, THE REMP SAMPLE COLLECTION SHEETS DESCRIBED IN THE REMP SURVEILLANCE PROCEDURE GP 1402, REV. 0, WERE NOT COMPLETED AND DISTRIBUTED AS REQUIRED BY APPENDIX A OF THE PROCEDURE FROM APRIL 1979 TO THE DATES OF INSPECTION. (2) UNIT 2 OPERATING PROCEDURE NO. 2104-2.11 REQUIRES THAT A RELEASE PERMIT BE COMPLETED FOR EACH NEUTRALIZING TANK DISCHARGE, WHICH IS TO INCLUDE SPECIFIED DATA AT THE START AND TERMINATION OF EACH TANK DISCHARGE. CONTRARY TO THESE REQUIREMENTS, THE NEUTRALIZING TANK RELEASE PERMITS WERE NOT COMPLETED, AS REQUIRED, FOR UNIT 2 NEUTRALIZING TANK DISCHARGE ON SEVERAL OCCASIONS, INCLUDING ON OCTOBER 5, 1978, MARCH 1, 2, 3, 4, 5, 6, 7, 8, AND 10, 1979. (3) UNIT 2 PROCEDURE NO. 2104-3.8, REV. 6 ASSIGNS TO UNIT 1 THE RESPONSIBILITY TO ASSURE COMPLIANCE WITH PLANT DELTA T REQUIREMENTS, INCLUDING CALIBRATIONS OF THE PLANT INTAKE/DISCHARGE TEMPERATURE MONITORING SYSTEM. CONTRARY TO THESE REQUIREMENTS, UNIT 2 PROCEDURE 2104-3.8, REV. 6 WAS NOT FULLY IMPLEMENTED IN THAT THE PLANT TEMPERATURE MONITORING SYSTEM WAS NOT CALIBRATED DURING 1978 AND 1979.
(7928 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS:

No significant information to report.

♦ LAST IE SITE INSPECTION DATE: 4/26/80

♦ INSPECTION REPORT NO: 50-320/80-05

SUMMARY

INSPECTION SUMMARY

♦ 50-320/79-28 - Nov 6-9, 15-16, 27-28: Special, unannounced inspection of the environmental monitoring programs for pre- and post-March 1979 TMI-2 periods. The inspection included the management controls for the environmental monitoring programs; implementation of the environmental monitoring programs - radiological; implementation of the environmental monitoring programs - biological/ecological; and nonradioactive effluent release rates and limits. The inspection involved 60 hours onsite by two region-based NRC inspectors. Noncompliances: Ten (failure to perform the required audits of the environmental monitoring program; failure to follow procedures; failure to collect and analyze required drinking water samples; failure to collect and analyze environmental air samples; failure to collect and analyze required milk samples; failure to meet the required detection sensitivities for I-131 in air and water samples; failure to perform the required fish studies; failure to report exceeding the plant delta T limit; failure to maintain plant records; failure to have adequate procedures).

♦ 50-320/80-01 - Jan 5-31: Special inspection by NRC/TMI staff of licensee action on previous inspection findings; new and revised procedures; plant operations including shift activities as monitored by NRC shift inspectors; casualty drills; and contaminated TLDs. The inspection included day shift coverage with selected backshift coverage by NRC shift radiation specialists. Noncompliances: None.

PLANT STATUS

+ The plant commenced a refueling and maintenance outage on April 11, 1980. Startup is scheduled for June 1980.

LAST IE SITE INSPECTION DATE: 04/01-31/80+

INSPECTION REPORT NO: 50-344/80-10+

SUMMARY

INSPECTION SUMMARY:

+ Inspection on March 17-21 & April 21, 1980 (Report No. 50-344/80-05)
Areas Inspected: Included a review of security plan; security program audit; security organization; protected area physical barriers; alarm stations; detection aids; communications; testing and maintenance; power supply; and locks, keys and combinations. The inspection involved 136 inspector hours onsite by four NRC inspectors.

Results: The licensee was found to be in compliance with NRC requirements within the ten areas examined except for the following item (Infraction - Failure to close and lock communications room door).

+ Inspection on March 3-31, 1980 (Report No. 50-344/80-06)
Areas Inspected: Routine inspections of plant operations, maintenance, radiological protection, physical security, review and audit, and followup on Licensee Event Reports. The inspection involved 144 inspector hours by the NRC Resident Inspectors.

Results: No items of noncompliance or deviations were identified.

+ Inspection on April 14-18, 1980 (Report No. 50-344/80-07)
Report being prepared; to be reported next month.

+ Inspection on April 8, 1980 (Report No. 50-344/80-08)
Report being prepared; to be reported next month.

+ Inspection on April 21-24, 1980 (Report No. 50-344/80-09)

Report being prepared; to be reported next month.

+ Inspection on April 1-30, 1980 (Report No. 50-344/80-10)
Areas Inspected: Routine inspections of plant operations, maintenance, surveillance testing, physical security, review and audit, refueling activities, and followup on Licensee Event Reports. The inspection involved 206 inspector hours by the NRC Resident Inspectors.

Results: No items of noncompliance or deviations were identified.

- LAST IE SITE INSPECTION DATE: APRIL 1-30, 1980
- INSPECTION REPORT NO: 50-250/80-16

SUMMARY

INSPECTION SUMMARY

- INSPECTION MARCH 25-28 (80-08): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 23 INSPECTOR-HOURS ON SITE IN THE AREAS OF QUALITY CONTROL AND CONFIRMATORY MEASUREMENTS, INCLUDING REVIEW OF THE LABORATORY QUALITY CONTROL PROGRAM; REVIEW OF CHEMICAL AND RADIOCHEMICAL PROCEDURES; AND COMPARISON OF THE RESULTS OF SPLIT SAMPLES ANALYZED BY THE LICENSEE AND THE NRC REGION II MOBILE LABORATORY. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO HAVE AND FOLLOW WRITTEN PROCEDURES FOR RADIOCHEMISTRY COUNTING EQUIPMENT).

INSPECTION MARCY 26-27 (80-09): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 8 INSPECTOR-HOURS ON SITE IN THE AREAS OF PIPE SUPPORT BASEPLATE DESIGNS USING CONCRETE EXPANSION ANCHOR BOLTS (IEB 79-02); AND SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS (IEB 79-14). OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 1-29 (80-10): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 67 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT NUCLEAR SAFETY COMMITTTEE MEETINGS; PLANT OPERATIONS; FOLLOWUP ON REPORTABLE EVENTS; ADHERENCE TO PLANT PROCEDURES; AND AUXILIARY FEEDWATER PUMP MAINTENANCE PROCEDURES. OF THE FIVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO FOLLOW PROCEDURE); ONE APPARENT DEVIATION WAS FOUND IN ONE AREA (DEVIATION - FAILURE TO GENERATE FINAL APPROVED MAINTENANCE PROCEDURES FOR AUXILIARY FEEDWATER).

INSPECTION FEBRUARY 28-29 (80-11): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 3 INSPECTOR-HOURS ON SITE IN THE AREA OF TRANSPORTATION OF RADIOACTIVE MATERIALS AND CONSISTED OF A REVIEW OF THE CIRCUMSTANCES SURROUNDING A RECENT RADIOACTIVE WASTE SHIPMENT WHICH REPORTEDLY DID NOT CONFORM TO DEPARTMENT OF TRANSPORTATION REGULATIONS. OF THE ONE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 10-11 (80-14): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 12 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONSTRUCTION STATUS, LICENSEE ACTION ON PREVIOUS INSPECTION FINDINGS, AND REVIEW OF STORAGE RECORDS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 1-31 (80-15): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 37 INSPECTOR-HOURS ON SITE IN THE AREAS OF SURVEILLANCE TEST OBSERVATION; LOW POWER PHYSICS TESTING ACTIVITIES; PLANT OPERATIONS; AND FOLLOWUP OF REPORTABLE EVENTS. OF THE 4 AREAS INSPECTED, NO APPARENT ITEM OF NONCOMPLIANCE WERE IDENTIFIED, BUT ONE APPARENT DEVIATION WAS FOUND IN ONE AREA (DEVIATION - FAILURE TO HAVE INSTALLATION OF FIRE PUMPS IN ACCORDANCE WITH NFPA-20).

PLANT STATUS:

+ UNIT SHUT DOWN FOR STEAM GENERATOR TUBE INSPECTION AND LOW PRESSURE TURBINE ROTOR REPLACEMENT.

+ LAST IE SITE INSPECTION DATE: APRIL 1-30, 1980

+ INSPECTION REPORT NO: 50-251/80-14

SUMMARY

INSPECTION SUMMARY

+ INSPECTION MARCH 25-28 (80-08): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 23 INSPECTOR-HOURS ON SITE IN THE AREAS OF QUALITY CONTROL AND CONFIRMATORY MEASUREMENTS, INCLUDING REVIEW OF THE LABORATORY QUALITY CONTROL PROGRAM; REVIEW OF CHEMICAL AND RADIOCHEMICAL PROCEDURES; AND COMPARISON OF THE RESULTS OF SPLIT SAMPLES ANALYZED BY THE LICENSEE AND THE NRC REGION II MOBILE LABORATORY. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO HAVE AND FOLLOW WRITTEN PROCEDURES FOR RADIOCHEMISTRY COUNTING EQUIPMENT).

INSPECTION MARCY 26-27 (80-09): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 8 INSPECTOR-HOURS ON SITE IN THE AREAS OF PIPE SUPPORT BASEPLATE DESIGNS USING CONCRETE EXPANSION ANCHOR BOLTS (IEB 79-02); AND SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS (IEB 79-14). OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 1-29 (80-10): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 68 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT NUCLEAR SAFETY COMMITTEE MEETINGS; PLANT OPERATIONS; FOLLOWUP ON REPORTABLE EVENTS; ADHERENCE TO PLANT PROCEDURES; AND AUXILIARY FEEDWATER PUMP MAINTENANCE PROCEDURES. OF THE FIVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO FOLLOW PROCEDURE); ONE APPARENT DEVIATION WAS FOUND IN ONE AREA (DEVIATION - FAILURE TO GENERATE FINAL APPROVED MAINTENANCE PROCEDURES FOR AUXILIARY FEEDWATER).

INSPECTION FEBRUARY 28-29 (80-11): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 3 INSPECTOR-HOURS ON SITE IN THE AREA OF TRANSPORTATION OF RADIOACTIVE MATERIALS AND CONSISTED OF A REVIEW OF THE CIRCUMSTANCES SURROUNDING A RECENT RADIOACTIVE WASTE SHIPMENT WHICH REPORTEDLY DID NOT CONFORM TO DEPARTMENT OF TRANSPORTATION REGULATIONS. OF THE ONE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 10-11 (80-12): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 12 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONSTRUCTION STATUS, LICENSEE ACTION ON PREVIOUS INSPECTION FINDINGS, AND REVIEW OF STORAGE RECORDS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 1-31 (80-13): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 27 INSPECTOR-HOURS ON SITE IN THE AREAS OF SURVEILLANCE TEST OBSERVATION; PLANT OPERATIONS; AND FOLLOWUP OF REPORTABLE EVENTS. OF THE 3 AREAS INSPECTED, NO APPARENT ITEM OF NONCOMPLIANCE WERE IDENTIFIED, BUT ONE APPARENT DEVIATION WAS FOUND IN ONE AREA (DEVIATION - FAILURE TO HAVE INSTALLATION OF FIRE PUMPS IN ACCORDANCE WITH NFPA-20).

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 20.201(B) REQUIRES EACH LICENSEE TO MAKE OR CAUSE TO BE MADE SUCH SURVEYS AS MAY BE NECESSARY TO COMPLY WITH THE REGULATORY REQUIREMENTS SPECIFIED IN 10 CFR PART 20. CONTRARY TO THE ABOVE REQUIREMENT SURVEYS ADEQUATE TO ASSURE COMPLIANCE WITH 10 CFR 20.101(A) WERE NOT PERFORMED IN THE REACTOR VESSEL ON 10/2/79. NO MEASUREMENTS OF BETA RADIATION WERE MADE PRIOR TO HYDROLASTING ALTHOUGH SUBSEQUENT MEASUREMENTS INDICATED BETA EXPOSURES OF 1.75 R/HR ON UNHYDROLASED AREAS.
(7914 INFRACTION)

TS 6.5.B REQUIRES IN PART THAT "RADIATION CONTROL STANDARDS & PROCEDURES SHALL BE PREPARED, APPROVED & MAINTAINED...". PROCEDURE AP 0502 REQUIRES THAT STANDARD RADIATION WORK PERMITS (RWP) BE USED FOR NONROUTINE WORK IN THE RADIATION CONTROL AREA (RCA) & THAT PERTINENT RESULTS OF RADIOLOGICAL SURVEYS BE ENTERED ON THE RWP. CONTRARY TO THE ABOVE REQUIREMENT, A NONROUTINE TASK, HYDROLASING THE REACTOR VESSEL, WAS PERFORMED UNDER A ROUTINE RWP WHICH DID NOT INDICATE RADIOLOGICAL DATA PERTINENT TO THE TASK. THE RWP INDICATED CONTAMINATION LEVELS OF 5000-3000 DPM/100 CM TO THE SECOND & RADIATION LEVELS OF 10-35 MR/HR WHEN LICENSEE SURVEYS INDICATED CONTAMINATION LEVELS IN EXCESS OF 1,000,000 DPM/100 CM TO THE SECOND & RADIATION LEVELS IN EXCESS OF 3,000 MR/HR.
(7914 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

- SYSTEMS AND COMPONENT PROBLEMS:
- On May 3, 1980 with the facility operating at full rated power, a lightning strike in the plant yard caused the loss of several annunciator panels on the electrical/turbine sections of the main control board. No other control board instruments were affected. The annunciator panels were returned to a fully operable status on May 5, 1980.

FACILITY ITEMS (PLANS AND PROCEDURES):

- Plant shutdown for refueling operations is scheduled for September 1980.

PLANT STATUS:

- Routine operations at power continue. SJAE offgas release rate is 4470 microcuries per second. Stack release rate is below 100 microcuries per second.
- LAST IE SITE INSPECTION DATE: 5/1/80
- INSPECTION REPORT NO: 50-271/80-06

SUMMARY

INSPECTION SUMMARY

- 50-271/80-04 - Mar 13-14 & 17-19: Routine, unannounced inspection by two region-based inspectors (41 hours onsite) of Small Break LOCA Operator Guidelines, including emergency procedure preparation and review for technical adequacy, operator training and interviews with operators on emergency procedure response; and followup on reportable occurrence LER 80-11/1P, potential for safeguard electrical bus degradation. Noncompliances: None.

NRC POWER RESTRICTIONS: NONE

* INSPECTION REPORT NO: 80-02

SUMMARY

INSPECTION SUMMARY

* Investigation on February 6 and 27-28, (80-02): Special, unannounced investigation into an allegation that a licensed reactor operator was under the influence of marijuana on January 17, 1980, while on duty in the control room of the Zion Generating Station, Unit 1. The investigation involved eight investigative hours. The allegation was not substantiated. No items of noncompliance with NRC requirements were identified during the course of the investigation.

FACILITY DATA

Facility Description

1.	Location (state/county) (nearest population center)	Illinois/Lake 40 miles N of Chicago
2.	Electric Reliability Council	Mid-America Interpool Network
3.	Type of Reactor	PWR
4.	Licenses Power Level (MWT)	3250
5.	Design Electrical Rating (MWE Net)	1040
6.	Date of Initial Criticality	December 24, 1973
7.	Date of Commercial Operation	September 17, 1974
8.	Condenser Cooling Method	Straight Through
9.	Condenser Cooling Water Source	Lake Michigan

Utility & Contractor Information

10.	Licensee	Commonwealth Edison Co.
11.	Corporate Address	P. O. Box 767 Chicago, Illinois
12.	Corporate Contact	D. L. Peoples, Manager of Nuclear Licensing
13.	Architect/Engineer	Sergent & Lundy
14.	Nuclear Steam Supply System	Westinghouse
15.	Constructor	Various

Regulatory Information

16.	IE Region responsible	III
17.	IE Branch Chief	R. Heishman
18.	IE Section Chief	W. S. LITTLE
19.	IE Resident Inspector	J. E. Kohler (312) 746-2313
20.	Licensing Project Manager	E. Reeves
21.	Docket Number	50-304
22.	License Number/Date of Issue	DPR-48, 11/14/73
23.	Public Document Room	Zion-Benton Public Library 2600 Emmans Avenue Zion, Illinois 60099

III. Independent Spent Fuel Storage Installations (h)							
Morris Operations		750 MTU (j)	315	385 MTU (j)	1490 MTU (j)		
NFS(i)		250 MTU	170 MTU	80 MTU			

(a) At each refueling outage approximately 1/3 of a PWR core and 1/4 of a BWR core is off-loaded.
(b) Some of these dates have been adjusted by staff assumptions.
(c) This is the total for both units.
(d) Plant not in commercial operation.
(e) Some spent fuel stored at Brunswick.
(f) Authorized a total 2088 BWR and 304 PWR assemblies for both pools.
(g) Robinson 2 assemblies being shipped to Brunswick for storage.
(h) Capacity is in metric tons of uranium; 1 MTU = 2 PWR assemblies or 5 BWR assemblies.
(i) No longer accepting spent fuel.
(j) Racked for 700 MTU.
(k) Reserved
(l) This is the station total.

N/S = Not Scheduled

REACTOR-YEARS OF EXPERIENCE

AS OF 4/01/80

The total of Reactor years of experience is as the sum of all calendar days for each unit, from the date that electricity was first generated until a final shutdown date or the status date, whichever comes first, divided by 365.25 days/year.

If a date is unknown, the first day of the first month of operation is substituted. Units which have not yet generated electricity but which are licensed are listed but not included in the computation.

(INFORMATION INCLUDES BOTH LICENSED AND NON-LICENSED ELECTRICAL UNITS).

NUREG 0020
VOL. 4 NO. 6
JUNE 1980

LICENSED OPERATING REACTORS

AUTHORIZATION AND CLEARANCE

THE U.S. NUCLEAR REGULATORY COMMISSION'S OFFICE OF MANAGEMENT AND PROGRAM ANALYSIS PUBLISHES THIS MONTHLY STATUS REPORT "AS PART OF THE REPORTING REQUIREMENTS IN SECTION 50.36 OF 10 CFR PART 50 UNDER GAO CLEARANCE NUMBER B-180225, WITH AN EXPIRATION DATE OF SEPTEMBER 30, 1981," AS STATED IN THE OCTOBER 3, 1978 LETTER FROM JOHN M. LOVELADY, ASSISTANT DIRECTOR, GENERAL GOVERNMENT DIVISION, U. S. GENERAL ACCOUNTING OFFICE, TO J.M. FELTON, DIRECTOR, DIVISION OF RULES AND RECORDS, U.S. NUCLEAR REGULATORY COMMISSION.

STATEMENT OF PURPOSE

The U. S. Nuclear Regulatory Commission's monthly OPERATING UNITS STATUS REPORT – LICENSED OPERATING REACTORS, provides data on the operation of nuclear units as timely and accurately as possible. This information is collected by the Office of Management and Program Analysis from the Headquarters Staff of NRC's Office of Inspection and Enforcement, from NRC's Regional Offices, and from utilities. Since all of the data concerning operation of the units is provided by the utility operators less than two weeks after the end of the month, necessary corrections to published information are shown on the ERRATA page.

This report is divided into three sections: the first contains monthly highlights and statistics for commercial operating units, and errata from previously reported data; the second is a compilation of detailed information on each unit, provided by NRC Regional Offices, IE Headquarters and the Utilities; and the third section is an appendix for miscellaneous information such as spent fuel storage capability, reactor-years of experience and non-power reactors in the United States.

The percentage computations, Items 19 through 24 in Section 2, the vendor capacity factors on page 1-4, and actual vs. potential energy production on Page 1-2 are computed from actual power production from the period of consideration. The percentages listed in power generation on Page 1-2 are computed as an arithmetical average. The factors for the life-span of each unit (the "Cumulative" column) are reported by the utility and are not entirely re-computed by NRC. Utility power production data is checked for consistency with previously submitted statistics.

In some cases, the numbers in the "Cumulative" column may have been totaled from a date that is different from the date of commercial operation. In these cases, the column is noted with an explanation of the nature of the change on each individual plant page in Section 2.

It is hoped this status report proves informative and helpful to all agencies and individuals interested in analyzing trends in the nuclear industry which might have safety implications, or in maintaining an awareness of the U. S. energy situation as a whole.

- Inspection and Enforcement Status
- Reports Received from Licensee
- Operating Status
- Average Daily Power Level (MWe)
- Unit Shutdowns/Reductions

SECTION 3 – APPENDIX

STATUS OF SPENT FUEL STORAGE CAPABILITY 3-2
REACTOR-YEARS OF EXPERIENCE 3-3
NON-POWER REACTORS IN THE U.S. 3-4

GLOSSARY

AVERAGE DAILY POWER LEVEL (MWe)	The net electrical energy generated during the day (measured from 0001 to 2400 hours inclusive) in megawatts hours divided by 24 hours.
LICENSED THERMAL POWER (MWt)	The maximum thermal power of the reactor authorized by the NRC, expressed in megawatts.
DATE OF COMMERCIAL OPERATION	Date unit was declared by utility owner to be available for the regular production of electricity; usually related to satisfactory completion of qualification tests as specified in the purchase contract and to accounting policies and practices of utility.
DESIGN ELECTRICAL RATING (DER) (Net MWe)	The nominal net electrical output of the unit specified by the utility and used for the purpose of plant design.
FORCED OUTAGE	An outage required to be initiated no later than the weekend following discovery of an off-normal condition.
FORCED OUTAGE HOURS	The clock hours during the report period that a unit is unavailable due to forced outages.
GROSS ELECTRICAL ENERGY GENERATED (MWH)	Electrical output of the unit during the report period as measured at the output terminals of the turbine generator, in megawatts hours.
GROSS HOURS	The clock hours from the beginning of a specified situation until its end. For outage durations, the clock hours during which the unit is not in power production.
GROSS THERMAL ENERGY GENERATED (MWH)	The thermal energy produced by the unit during the report period as measured or computed by the licensee in megawatt hours.
HOURS GENERATOR ON-LINE	Also, "Unit Service Hours." The total clock hours in the report period during which the unit operated with breakers closed to the station bus. These hours added to the total outage hours experienced by the unit during the report period, shall equal the hours in the report period.
HOURS IN REPORTING PERIOD	For units in power ascension at the end of the period, the gross hours from the beginning of the period or the first electrical production, whichever comes last, to the end of the period. For units in commercial operation at the end of the period, the gross hours from the beginning of the period or of commercial operation, whichever comes last, to the end of the period or decommissioning, whichever comes first.
HOURS REACTOR CRITICAL	The total clock hours in the report period during which the reactor sustained a controlled chain reaction.
MAXIMUM DEPENDABLE CAPACITY (GROSS) (MDC Gross) (Gross MWe)	Dependable main-unit gross capacity, winter or summer, whichever is smaller. The dependable capacity varies because the unit efficiency varies during the year due to cooling water temperature variations. It is the gross electrical output as measured at the output terminals of the turbine generator during the most restrictive seasonal conditions (usually summer).
MAXIMUM DEPENDABLE CAPACITY (NET) (MDC Net) (Net MWe)	Maximum Dependable Capacity (Gross) less the normal station service loads.
NAMEPLATE RATING (Gross MWe)	The nameplate power designation of the generator in megavolt amperes (MVA) times the nameplate power factor of the generator. NOTE: The nameplate rating of the generator may not be indicative of the maximum or dependable capacity, since some other item of equipment of a lesser rating (e.g. , turbine) may limit unit output.
NET ELECTRICAL ENERGY GENERATED	Gross electrical output of the unit measured at the output terminals of the turbine generator during the reporting period, minus the normal station service electrical energy utilization. If this quantity is less than zero, a negative number should be recorded.
OUTAGE	A situation in which no electrical production takes place.
OUTAGE DATE	As reported on Appendix D of Reg. Guide 1.16, the date of the start of the outage. If continued from a previous month, report the same outage date but change "Method of Shutting Down Reactor" to "4 (Other)" and add a note: "Continued from previous month."
OUTAGE DURATION	The total clock hours of the outage measured from the beginning of the report period or the outage, whichever comes last, to the end of the report period or the outage, whichever comes first.
OUTAGE NUMBER	A number unique to the outage assigned by the licensee. The same number is reported each month in which the outage is in progress. One format is "76-05" for the fifth outage to occur in 1976.
PERIOD HOURS	See "Hours in Reporting Period."
POWER REDUCTION	A reduction in the Average Daily Power Level of more than 20% from the previous day. All power reductions are defined as outage of zero hours durations for the purpose of computing unit service and availability factors, and forced outage rate.
REACTOR AVAILABLE HOURS	The total clock hours in the report period during which the reactor was critical or was capable of being made critical. (Reactor Reserve Shutdown Hours + Hours Reactor Critical.)
REACTOR AVAILABILITY FACTOR	$\frac{\text{Reactor Available Hours} \times 100}{\text{Period Hours}}$
REACTOR RESERVE SHUTDOWN	The cessation of criticality in the reactor for administrative or other similar reasons when operation could have been continued.
REACTOR RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the reactor is in reserve shutdown mode. NOTE: No credit is given for NRC imposed shutdowns.
REACTOR SERVICE FACTOR	$\frac{\text{Hours Reactor Critical} \times 100}{\text{Period Hours}}$
REPORT PERIOD	Usually, the preceding calendar month. Can also be the preceding calendar year, (Year-to-Date), or the life-span of a unit (cumulative).
RESTRICTED POWER LEVEL	Maximum net electrical generation to which the unit is restricted during the report period due to the state of equipment, external conditions, administrative reasons, or a direction by NRC.
SCHEDULED OUTAGE	Planned removal of a unit from service for refueling, inspection, training, or maintenance. Those outages which do not fit the definition of "Forced Outage" perforce are "Scheduled Outages."
STARTUP AND POWER ASCENSION TEST PHASE	Period following initial criticality during which the unit is tested at successively higher levels, culminating with operation at full power for a sustained period and completion of warranty runs. Following this phase, the utility generally considers the unit to be available for commercial operation.
UNIT	The set of equipment uniquely associated with the reactor, including turbine generators, and ancillary equipment, considered as a single electrical energy production facility.
UNIT AVAILABLE HOURS	The total clock hours in the report period during which the unit operated on-line or was capable of such operation. (Unit Reserve Shutdown Hours + Hours Generator On-Line.)
UNIT AVAILABILITY FACTOR*	$\frac{\text{Unit Available Hours} \times 100}{\text{Period Hours}}$
UNIT CAPACITY FACTORS	
– Using Licensed Thermal Power	$\frac{\text{Gross Thermal Energy Generated} \times 100}{\text{Period Hours} \times \text{Lic. Thermal Power}}$
– Using Nameplate Rating	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{Nameplate Rating}}$
– Using DER	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{DER}}$
– Using MDC Gross	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Gross}}$
– Using MDC Net	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Net}}$

NOTE: if MDC Gross and/or MDC Net have not been determined, the DER is substituted for this quantity for Unit Capacity Factor calculations.

UNIT FORCED OUTAGE RATE	$\frac{\text{Forced Outage Hours}}{\text{Unit Service Hours} + \text{Forced Outage Hours}}$
UNIT RESERVE SHUTDOWN	The removal of the unit from on-line operation for economic or other similar reasons when operation could have been continued.
UNIT RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the unit was in reserve shutdown mode.
UNIT SERVICE FACTOR	$\frac{\text{Unit Service Hours} \times 100}{\text{Period Hours}}$
UNIT SERVICE HOURS	See "Hours Generator On-Line."

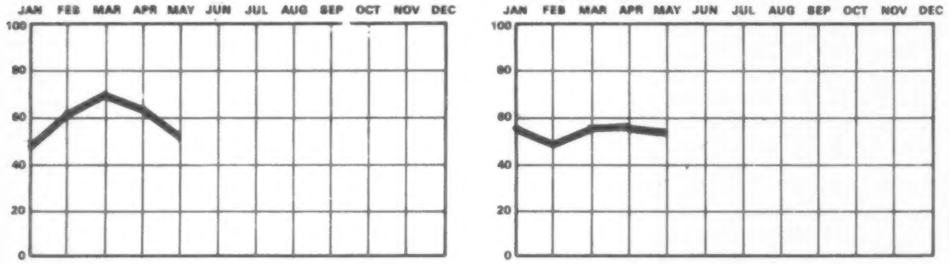
REFUELING SCHEDULE

Please refer to the table on page 3-2 for the scheduled refueling date for each nuclear powerplant in this publication.

VENDOR AVERAGE CAPACITY FACTORS

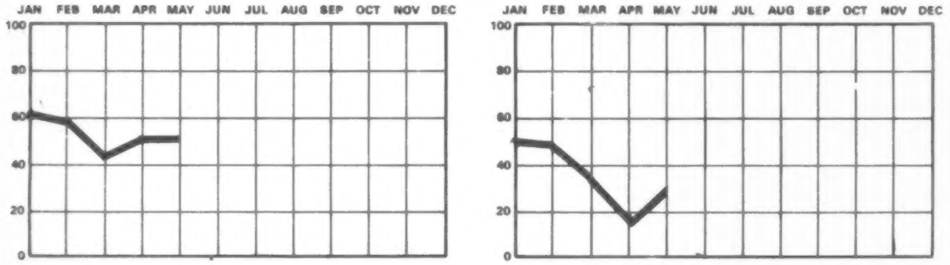
WESTINGHOUSE

COMBUSTION ENGINEERING



GENERAL ELECTRIC

BABCOCK & WILCOX



NOTE: THIS DISPLAY OF AVERAGE CAPACITY FACTORS PROVIDES A GENERAL PERFORMANCE COMPARISON OF PLANTS SUPPLIED BY THE FOUR NUCLEAR STEAM SUPPLY SYSTEM VENDORS. ONE MUST BE CAREFUL WHEN DRAWING CONCLUSIONS REGARDING THE REASONS FOR THE PERFORMANCE LEVELS INDICATED, SINCE PLANT PERFORMANCE MAY BE AFFECTED BY UNSPECIFIED FACTORS SUCH AS: (1) VARIOUS PLANT DESIGNS AND MODELS ARE INCLUDED FOR EACH VENDOR; (2) TURBINE/GENERATORS AND (3) DIFFERENT ARCHITECT/ENGINEERS ARE ALSO INVOLVED.

CFMDC	52.3	54.6	56.6	28.5	49.3

Capacity factor in this page, denoted as CFMDC, is a function of the net maximum dependable capacity. See the corresponding definition in the Glossary. The vendor averages are computed by the formula:

$$\frac{\text{Net Electrical Energy Produced by Vendor}}{\text{Potential Electrical Production By Vendor In This Month.}} \times 100\%$$

Units Excluded	Reason for Exclusion
Indian Point 1 Humboldt Bay Three Mile Island 2	Unit Shutdown Indefinitely
Big Rock Point	Not Representative of Typical BWRs
LaCrosse	Not Representative of Typical BWRs and Atypical Vendor
Fort St. Vrain	Atypical Vendor and Reactor Design

AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIALLY OPERATING UNITS

This chart depicts the average daily power level for the units in commercial operation during the month.

The straight line on the graph labelled "SUM OF MAX. DEPEND. CAP." is plotted at the value shown by summing the separate maximum dependable capacities of the commercially operating units (in Net MWe). The plot shown below the line is calculated by summing the separate average daily power levels of the commercially operating units for each day of the month.

The scale on the left vertical axis runs in 1,000 MWe increments from 0 to 55,000 MWe (Net). The right vertical axis shows the percentage in 10% increments, up to 100% of the "SUM OF MAX. DEPEND. CAP."

It should be recognized that the 100% line would be obtainable only if all of the commercially operating units operated at 100% capacity, 24 hours per day, for the entire month. In other words, since any power generator must occasionally shut down to refuel and/or perform needed maintenance, and also since 100% capacity production is not always required by power demands, the 100% line is a theoretical goal and not a practical one.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR PART 20.203(C), "HIGH RADIATIONAREAS," THE FOLLOWING ACCESSES TO POSTED HIGH RADIATION AREAS WERE FOUND TO BE UNLICKED AND OPEN WITH NO POSITIVE ACCESS CONTROL ON APR 2, 1980: 1. DOOR 137 TO THE "B" CHARGING PUMP (P36B) ROOM. ACCESSIBLE WHOLE BODY RADIATION WAS IN EXCESS OF 300 MILLIREMS PER HOUR. 2. ACCESS TO SEAL RETURN COOLER ROOM (EL. 369'). ACCESSIBLE WHOLE BODY RADIATION WAS IN EXCESS OF 350 MILLIREMS PER HR.
(8006 INFRACTION)

CONTRARY TO PROCEDURE 1053.01, CONTROL OF COMBUSTIBLES. TWO BUCKETS OF OIL WERE LEFT IN THE INTAKE STRUCTURE AND AN OXYGEN AND AN ACETYLENE BOTTLE WERE LEFT IN THE LOWER SOUTH PIPING PENETRATION ROOM.
(8006 INFRACTION)

CONTRARY TO THE RADIATION PROTECTION MANUAL, 1602.35, THE WASTE CONTROL OPERATOR ENTERED SEVERAL HIGH RADIATION AREAS WITHOUT A RADIATION SURVEY INSTRUMENT OR HEALTH PHYSICS COVERAGE.
(8006 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

A RCP seal failed on May 10, 1980. During current outage all four RCP seals will be removed, inspected, and rebuilt.

FACILITY ITEMS (PLANS AND PROCEDURES):

MANAGERIAL ITEMS

PLANT STATUS:

The unit is in a maintenance outage resulting from RCP seal failure on May 10, 1980.

LAST IE SITE INSPECTION DATE: March 22 - April 21, 1980

INSPECTION REPORT NO: 50-313/80-06

SUMMARY

INSPECTION SUMMARY

Inspection conducted during period of March 22 - April 21, 1980 (80-06): Routine, announced inspection including Emergency Planning Drills, Surveillance Observation, Follow-up on IE Circulars, Follow-up on Licensee Event Reports, Operational Safety Verification, and Organization and Administration. Within the six areas inspected, three items of noncompliance were identified (infraction - control of high radiation areas; infraction - control of combustibles; use of radiation survey instrument in high radiation areas.)

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS (PLANS AND PROCEDURES):

Refueling/modification outage commenced 11/30/79 and is scheduled to continue until 7/22/80.

PLANT STATUS:

In cold shutdown. Major modifications are underway on the following safety-related systems: Bergen-Patterson large bore snubbers; Grinnel small bore snubbers; containment spray pumps; refueling water storage tank; low head safety injection pumps; inside recirc spray pumps; pipe hangers; auxiliary feedwater pumps; low pressure turbine rotors; main transformer; and unit station service transformer.

LAST IE SITE INSPECTION DATE: 5/30/80

INSPECTION REPORT NO: 50-334/80-14

SUMMARY

INSPECTION SUMMARY

50-334/80-06 - Feb 11 - Mar 7: Routine inspections by the resident inspectors (100 hours) of: action on previous inspection findings; plant operations; refueling operations; licensee event review; review of physical protection/plant security; and review of a potential for containment hydrogen recombiner failures. One item of noncompliance was identified: (Failure to maintain fire penetration barrier integrity).

50-334/80-08 - Mar 24-28: Routine announced inspection (75 hours) by one region-based inspector and one headquarters-based Engineer of the Quality Assurance Program (QAP) implementation including: QA Program Review; QA/QC Administration; Design Change/Modification Controls; Offsite Support Staff (including Training); Document Control; Test and Measurement; and followup on previously identified items. No items of noncompliance were identified.

50-334/80-10 - Apr 8-9: Unannounced investigation (20 hours) by two NRC regional investigators of two allegations concerning weld rod control and work practices of an electrical subcontractor. None of the allegations could be substantiated. No items of noncompliance were identified.

50-334/80-11 - Apr 15-17: Routine, unannounced inspection by one region-based inspector (24 hours) of welding and nondestructive examination activities associated with the recirculation spray and low head safety injection system modification, and licensee action on previous inspection findings. No items of noncompliance were identified.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-020/ 03L	03/29/80	04/29/80	Fuse holder fault in lo-lo VCT/RWST ckt caused VCT outlet to shut & RWST outlet to open as if vct level were low. Fuse holder replacement corrected problem.
80-022/ 01T	04/02/80	04/22/80	A loss of RHR flow occurred when operators were trying to increase flow in mode 5 w/the steam generators drained & the RCS at midspan level in the loops when the pumps bound
80-023/ 01T	04/11/80	04/23/80	Complete RHR flow loss during bypass valve closure to increase flow
80-025/ 01T	04/15/80	04/16/80	12 inch nozzle weld to RWST does not meet penetration requirements
80-029/ 03L	04/09/80	05/06/80	Containment isolation check valve SI-42 on accum fill line failed periodic test for operating differential pressure. Investigation of failure & repairs being accomplished

INSPECTION REPORT NO: 80-06

SUMMARY

INSPECTION SUMMARY

Inspection on April 14-18, (80-05): Included a review of the Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys and Combinations; Records and Reports; and Independent Inspection Effort. The inspection involved 73 inspector hours onsite by 2 NRC inspectors. The inspection began during the offshift; 18 inspection hours were accomplished during offshift periods. The licensee was found to be in compliance with NRC requirements within the 20 areas examined during the inspection except for the following 3 items: Assessment Aids - The licensee failed to provide adequate assessment aids that conform with approved security plan commitments; Access Control (Identification, Authorization and Badging) - The licensee did not conduct proper personnel screening in accordance with security plan commitments; and Locks, Keys and Combinations - The licensee failed to provide adequate key control.

Inspection on May 5-8, (80-06): Routine, unannounced inspection pertaining to followup of items of NUREG 0578 identified during meeting on February 28-29, 1980 between DOR and the licensee (refer to Inspection Report 80-03). The inspection involved 17 inspector hours onsite by one NRC inspector. Of the areas inspected, no items of noncompliance were identified.

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 50, APPENDIX E, ITEM IV.H AND SECTION XI.A OF THE BROWNS FERRY SITE RADIOLOGICAL EMERGENCY PLAN, PERTINENT TRAINING SHALL BE PROVIDED TO INDIVIDUALS HAVING SPECIFIC DUTIES AND RESPONSIBILITIES IN AN EMERGENCY. TWO OF THE FOUR INDIVIDUALS DESIGNATED TO SUCCEED TO THE POSITION OF EMERGENCY DIRECTOR HAVE NOT RECEIVED TRAINING IN THE DUTIES AND RESPONSIBILITIES OF THAT POSITION.
(8016 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.3.A.8, DETAILED WRITTEN PROCEDURES COVERING, IN PART, IMPLEMENTATION OF THE RADIOLOGICAL EMERGENCY PLAN (REP)SHALL BE PREPARED, APPROVED, AND ADHERED TO. 1. SIX TRAINING ATTENDANCE RECORDS, FORM BF-45 FOR TRAINING HELD DURING JANUARY 8-15, 1980, DID NOT CONTAIN THE LESSON PLAN REFERENCE OR COURSE OUTLINE SUBJECT AS SPECIFIED IN BF 4.4. 2. THE CRITIQUE FOR THE JULY 1979 DRILL WAS NOT SUBMITTED TO THE PLANT SUPERINTENDENT WITHIN THE TIME LIMIT ALLOWED BY BF 22.1. THE EDNEY BUILDING RADIO TEST REQUIRED BY SECTION IV OF NUC PR-REP, WAS NOT COMPLETED AND/OR RECORDED ON 36 OCCASIONS DURING THE PERIOD JANUARY 1 - JUNE 30, 1979. 4. NO PROCEDURES HAVE BEEN PREPARED FOR : (A) INVENTORY OF EMERGENCY EQUIPMENT AND SUPPLIES, TRAINING OF OUTSIDE SUPPORT GROUPS AND UPDATING AND DISTRIBUTION OF THE REP AT THE MUSCLE SHOALS FACILITY. (B) TRAINING AND RETRAINING OF THE EMERGENCY TEAM LEADERS AND INVENTORY OF EMERGENCY REFERENCES AND SUPPLIES AT THE EDNEY BUILDING. (C) TRAINING AND RETRAINING OF DESIGNATED EMERGENCY DIRECTORS AT THE BROWNS FERRY SITE.
(8016 INFRACTION)

CRITERION IX OF APPENDIX B TO 10 CFR 50 STATES THAT MEASURES SHALL BE ESTABLISHED TO ASSURE THAT SPECIAL PROCESSES, INCLUDING WELDING, HEAT TREATING, AND NONDESTRUCTIVE TESTING, ARE CONTROLLED AND ACCOMPLISHED BY QUALIFIED PERSONNEL USING QUALIFIED PROCEDURES IN ACCORDANCE WITH APPLICABLE CODES, STANDARDS, SPECIFICATIONS, CRITERIA, AND OTHER SPECIAL REQUIREMENTS. THE ACCEPTED QUALITY ASSURANCE PROGRAM (TOPICAL REPORT TVA-TR-75-1A), SECTION 17.1A.9 STATES IN PART THAT TVA QA/QC PROCEDURES REQUIRE THAT SPECIAL PROCESSES ARE TO BE CONTROLLED AND ACCOMPLISHED BY QUALIFIED PERSONNEL USING QUALIFIED WRITTEN PROCEDURES. IN ADDITION, SECTION 6.3.A.1 OF THE FACILITY TECHNICAL SPECIFICATION STATED THAT: DETAILED WRITTEN PROCEDURES, INCLUDING APPLICABLE CHECKOFF LISTS COVERING ITEMS LISTED BELOW SHALL BE PREPARED, APPROVED AND ADHERED TO FOR PREVENTIVE OR CORRECTIVE MAINTENANCE OPERATIONS WHICH COULD HAVE AN EFFECT ON THE SAFETY OF THE REACTOR. ON MARCH 11, 1980, QUALIFIED PROCEDURES WERE NOT USED ON THE HPCI STEAM LINE WHEN ATTEMPTING TO CORRECT A MISALIGNMENT PROBLEM ON THE HPCI STEAM LINE BY USE OF HEAT TREATING.
(8019 INFRACTION)

10 CFR 50.72(A)(7) REQUIRES THAT EACH LICENSEE NOTIFY THE NRC OPERATIONS CENTER AS SOON AS POSSIBLE AS IN ALL CASES WITHIN ONE HOUR BY TELEPHONE OF THE OCCURRENCE OF A SIGNIFICANT EVENT. CONTRARY TO THE ABOVE A PROMPT REPORT WAS NOT MADE FOLLOWING THE AUTOMATIC ACTUATION OF THE "B" DIESEL GENERATOR AT 1:00 P.M. ON APRIL 23, 1980.
(8020 INFRACTION)

SUMMARY

INSPECTION SUMMARY

INSPECTION APRIL 5 - MAY 2 (80-20): THIS ROUTINE INSPECTION INVOLVED 33 RESIDENT INSPECTOR-HOURS IN THE AREAS OF OPERATIONAL SAFETY, REPORTABLE OCCURRENCES, IE BULLETIN FOLLOWUP, PLANT PHYSICAL PROTECTION, SURVEILLANCE INSTRUCTIONS, PLANT OPERATIONS REVIEW COMMITTEE, AND CONTAINMENT PURGING DURING OPERATION. OF THE SEVEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN FIVE AREAS. ONE ITEM OF APPARENT NONCOMPLIANCE WAS FOUND IN EACH OF TWO AREAS (INFRACTION - FAILURE TO FOLLOW PROCEDURE WHILE PERFORMING SURVEILLANCE); AND (INFRACTION - FAILURE TO MAKE A PROMPT REPORT TO NRC).

(8013 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.3.A.8, DETAILED WRITTEN PROCEDURES COVERING, IN PART, IMPLEMENTATION OF THE RADIOLOGICAL EMERGENCY PLAN (REP)SHALL BE PREPARED, APPROVED, AND ADHERED TO. 1. SIX TRAINING ATTENDANCE RECORDS, FORM BF-45 FOR TRAINING HELD DURING JANUARY 8-15, 1980, DID NOT CONTAIN THE LESSON PLAN REFERENCE OR COURSE OUTLINE SSUBJECT AS SPECIFIED IN BF 4.4. 2. THE CRITIQUE FOR THE JULY 1979 DRILL WAS NOT SUBMITTED TO THE PLANT SUPERINTENDENT WITHIN THE TIME LIMIT ALLOWED BY BF 22.1. THE EDNEY BUILDING RADIO TEST REQUIRED BY SECTION IV OF NUC PR-REP, WAS NOT COMPLETED AND/OR RECORDED ON 36 OCCASIONS DURING THE PERIOD JANUARY 1 - JUNE 30, 1979. 4. NO PROCEDURES HAVE BEEN PREPARED FOR: (A) INVENTORY OF EMERGENCY EQUIPMENT AND SUPPLIES, TRAINING OF OUTSIDE SUPPORT GROUPS AND UPDATING AND DISTRIBUTION OF THE REP AT THE MUSCLE SHOALS FACILITY. (B) TRAINING AND RETRAINING OF THE EMERGENCY TEAM LEADERS AND INVENTORY OF EMERGENCY REFERENCES AND SUPPLIES AT THE EDNEYBUILDING. (C) TRAINING AND RETRAINING OF DESIGNATED EMERGENCY DIRECTORS AT THE BROWNS FERRY SITE.
(8013 INFRACTION)

10 CFR 50.72(A)(7) REQUIRES THAT EACH LICENSEE NOTIFY THE NRC OPERATIONS CENTER AS SOON AS POSSIBLE AS IN ALL CASES WITHIN ONE HOUR BY TELEPHONE OF THE OCCURRENCE OF A SIGNIFICANT EVENT. CONTRARY TO THE ABOVE A PROMPT REPORT WAS NOT MADE FOLLOWING THE AUTOMATIC ACTUATION OF THE "B" DIESEL GENERATOR AT 1:00 P.M. ON APRIL 23, 1980.
(8015 INFRACTION)

ITEM 6.3.A.1 OF THE FACILITY TECHNICAL SPECIFICATION STATES THAT DETAILED WRITTEN PROCEDURES, INCLUDING CHECKOFF LISTS, SHALL BE PREPARED, APPROVED AND ADHERED TO FOR SURVEILLANCE AND TESTING REQUIREMENTS. CONTRARY TO THE ABOVE, ON APRIL 22, 1980, SURVEILLANCE INSTRUCTION 4.1.A-7, REACTOR PROTECTION SYSTEM REACTOR WATER LEVEL, WAS NOT ADHERED TO DURING IT'S PERFORMANCE OF VALVING MANIPULATIONS.

SUMMARY

INSPECTION SUMMARY

INSPECTION APRIL 5 - MAY 2 (80-15): THIS ROUTINE INSPECTION INVOLVED 33 RESIDENT INSPECTOR-HOURS IN THE AREAS OF OPERATIONAL SAFETY, REPORTABLE OCCURRENCES, IE BULLETIN FOLLOWUP, PLANT PHYSICAL PROTECTION, SURVEILLANCE INSTRUCTIONS, PLANT OPERATIONS REVIEW COMMITTEE, AND CONTAINMENT PURGING DURING OPERATION. OF THE SEVEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN FIVE AREAS. ONE ITEM OF APPARENT NONCOMPLIANCE WAS FOUND IN EACH OF TWO AREAS (INFRACTION - FAILURE TO FOLLOW PROCEDURE WHILE PERFORMING SURVEILLANCE); AND (INFRACTION - FAILURE TO MAKE A PROMPT REPORT TO NRC).

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OR EVENT	DATE OF REPORT	SUBJECT
80-013/ 03L-0	03/01/80	03/28/80	161KV POWER SUPPLY LOST INTERMITTENTLY DURING STORM.
80-014/ 03L-0	02/16/80	03/31/80	SURVEILLANCE PROCEDURE 42-B-44 FOUND INADEQUATE DURING TESTING.
80-015/ 03L-0	03/09/80	04/07/80	ROD BLOCK MONITOR A BYPASSED MORE THAN 24 HOURS IN 30 DAY PERIOD.
80-016/ 03L-0	03/10/80	04/08/80	HALF ISOLATION OCCURRED DUE TO BLOCK SENSING LINE TO PS-1-86.
80-017/ 03L-0	03/10/80	04/08/80	FAILED RUPTURED DISC IN TURBINE EXHAUST LINE RENDERED HPCI INOPERABLE.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATIONS 3.5.F.2, THE RCICS MAY BE INOPERABLE FOR A PERIOD NOT TO EXCEED 7 DAYS OF THE HPCIS IS OPERABLE DURING SUCH TIME PERIOD. IN ADDITION, BROWNS FERRY STANDARD PRACTICE 12.2 REQUIRES THE SHIFT ENGINEER, ASSISTANT SHIFT ENGINEER AND UNIT OPERATOR TO KEEP JOURNALS AND THESE JOURNALS SHALL CONTAIN SIGNIFICANT MALFUNCTIONS. ON DECEMBER 8, 1979, RCICS WAS INOPERABLE FOR APPROXIMATELY 4 HOURS FOR REPLACEMENTS AND CALIBRATION OF THE EGM BOX AND HPCIS WAS NOT DETERMINED TO BE OPERABLE. IN ADDITION, NEITHER THE UNIT OPERATOR, ASSISTANT SHIFT ENGINEER NOR THE SHIFT ENGINEER DOCUMENTED IN THEIR JOURNALS THAT RCICS WAS INOPERABLE FOR REPLACEMENT AND CALIBRATION OF OF THE EGM BOX.
(8012 INFRACTION)

AS REQUIRED BY 10 CFR 50, APPENDIX E, ITEM IV.H AND SECTION XI.A OF THE BROWNS FERRY SITE RADIOLOGICAL EMERGENCY PLAN, PERTINENT TRAINING SHALL BE PROVIDED TO INDIVIDUALS HAVING SPECIFIC DUTIES AND RESPONSIBILITIES IN AN EMERGENCY. TWO OF THE FOUR INDIVIDUALS DESIGNATED TO SUCCEED TO THE POSITION OF EMERGENCY DIRECTOR HAVE NOT RECEIVED TRAINING IN THE DUTIES AND RESPONSIBILITIES OF THAT POSITION.
(8014 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.3.A.8, DETAILED WRITTEN PROCEDURES COVERING, IN PART, IMPLEMENTATION OF THE RADIOLOGICAL EMERGENCY PLAN (REP)SHALL BE PREPARED, APPROVED, AND ADHERED TO. 1. SIX TRAINING ATTENDANCE RECORDS, FORM BF-45 FOR TRAINING HELD DURING JANUARY 8-15, 1980, DID NOT CONTAIN THE LESSON PLAN REFERENCE OR COURSE OUTLINE SUBJECT AS SPECIFIED IN BF 4.4. 2. THE CRITIQUE FOR THE JULY 1979 DRILL WAS NOT SUBMITTED TO THE PLANT SUPERINTENDENT WITHIN THE TIME LIMIT ALLOWED BY BF 22.1. THE EDNEY BUILDING RADIO TEST REQUIRED BY SECTION IV OF NUC PR-REP, WAS NOT COMPLETED AND/OR RECORDED ON 36 OCCASIONS DURING THE PERIOD JANUARY 1 - JUNE 30, 1979. 4. NO PROCEDURES HAVE BEEN PREPARED FOR: (A) INVENTORY OF EMERGENCY EQUIPMENT AND SUPPLIES, TRAINING OF OUTSIDE SUPPORT GROUPS AND UPDATING AND DISTRIBUTION OF THE REP AT THE MUSCLE SHOALS FACILITY. (B) TRAINING AND RETRAINING OF THE EMERGENCY TEAM LEADERS AND INVENTORY OF EMERGENCY REFERENCES AND SUPPLIES AT THE EDNEY BUILDING. (C) TRAINING AND RETRAINING OF DESIGNATED EMERGENCY DIRECTORS AT THE BROWNS FERRY SITE.

UNIT DOWN MAY 26, 1980 FOR REFUELING.

LAST IE SITE INSPECTION DATE: APRIL 28 - MAY 1 AND 6-8, 1980

INSPECTION REPORT NO: 50-325/80-20

SUMMARY

INSPECTION SUMMARY

INSPECTION MARCH 31 - MAY 2 (80-17): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 56 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONTROL ROOM OBSERVATIONS, REVIEW OF OPERATOR LOGS, TAGOUT OF SYSTEMS, TOURS OF VITAL AREAS, PHYSICAL SECURITY, RADIATION PROTECTION, HOUSEKEEPING AND CLEANLINESS, FIRE PROTECTION, OBSERVATION OF MAINTENANCE, OBSERVATION OF SURVEILLANCE AND REVIEW AND FOLLOWUP ON LICENSEE EVENT REPORTS. THIS ROUTINE INSPECTION INVOLVED 56 MANHOURS OF INSPECTION TIME ON SITE IN TEN AREAS IDENTIFIED ABOVE. OF THE TEN AREAS INSPECTED NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 28 - MAY 1 AND 6-8 (80-20): INCLUDED REVIEW OF SECURITY PLAN; PROTECTED AREA PHYSICAL BARRIERS; VITAL AREA PHYSICAL BARRIERS; LIGHTING; ACCESS CONTROL (IDENTIFICATION, AUTHORIZATION AND BADGING); ACCESS CONTROL (SEARCHING); ACCESS CONTROL (VITAL AREAS); DETECTION AIDS; COMMUNICATIONS; TESTING AND MAINTENANCE; COMPENSATORY MEASURES; POWER SUPPLY; RESPONSE; RECORDS AND REPORTS. THE INSPECTION INVOLVED 51 INSPECTOR-HOURS ON SITE BY TWO NRC INSPECTORS. EIGHT INSPECTOR-HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. OF THE FOURTEEN AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE WERE DISCLOSED IN EIGHT AREAS. SIX APPARENT ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN THREE AREAS: (1) PHYSICAL BARRIERS - FAILURE TO MAINTAIN ISOLATION ZONE CLEAR OF OBJECTS; (2) PHYSICAL BARRIERS - INOPERATIVE LOCKING DEVICE ON PROTECTED AREA (PA) BARRIER; (3) ACCESS CONTROL - FAILURE TO SEARCH HAND-CARRIED PACKAGES; (4) ACCESS CONTROL - FAILURE TO FOLLOW PROCEDURES FOR VEHICLE ACCESS INTO PA; (5) DETECTION AIDS - INTRUSION ALARMS AT CERTAIN LOCATIONS ALONG THE PA INOPERATIVE; AND (6) DETECTION AIDS - TAMPER INDICATING DEVICES DID NOT PERFORM IN ACCORDANCE WITH SPECIFICATIONS.

UNIT SHUTDOWN FOR REFUELING AND TORUS MODIFICATION.

LAST IE SITE INSPECTION DATE: APRIL 28 - MAY 1 AND 6-8, 1980

INSPECTION REPORT NO: 50-324/80-17

SUMMARY

INSPECTION SUMMARY

INSPECTION MARCH 31 - MAY 2 (80-14): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 50 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONTROL ROOM OBSERVATIONS, REVIEW OF OPERATOR LOGS, TAGOUT OF SYSTEMS, TOURS OF VITAL AREAS, PHYSICAL SECURITY, RADIATION PROTECTION, HOUSEKEEPING AND CLEANLINESS, FIRE PROTECTION, OBSERVATION OF MAINTENANCE, OBSERVATION OF SURVEILLANCE AND REVIEW AND FOLLOWUP ON LICENSEE EVENT REPORTS. THIS ROUTINE INSPECTION INVOLVED 50 MANHOURS OF INSPECTION TIME ON SITE IN TEN AREAS IDENTIFIED ABOVE. OF THE TEN AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 28 - MAY 1 AND 6-8 (80-17): INCLUDED REVIEW OF SECURITY PLAN; PROTECTED AREA PHYSICAL BARRIERS; VITAL AREA PHYSICAL BARRIERS; LIGHTING; ACCESS CONTROL (IDENTIFICATION, AUTHORIZATION AND BADGING); ACCESS CONTROL (SEARCHING); ACCESS CONTROL (VITAL AREAS); DETECTION AIDS; COMMUNICATIONS; TESTING AND MAINTENANCE; COMPENSATORY MEASURES; POWER SUPPLY; RESPONSE; RECORDS AND REPORTS. THE INSPECTION INVOLVED 40 INSPECTOR-HOURS ON SITE BY TWO NRC INSPECTORS. FIFTEEN INSPECTOR-HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. OF THE FOURTEEN AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE WERE DISCLOSED IN EIGHT AREAS; SIX APPARENT ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN THREE AREAS: (1) PHYSICAL BARRIERS - FAILURE TO MAINTAIN ISOLATION ZONE CLEAR OF OBJECTS; (2) PHYSICAL BARRIERS - INOPERATIVE LOCKING DEVICE ON PROTECTED AREA (PA); (3) ACCESS CONTROL - FAILURE TO SEARCH HAND-CARRIED PACKAGES; (4) ACCESS CONTROL - FAILURE TO FOLLOW PROCEDURES FOR VEHICLES ACCESS INTO PA; (5) DETECTION AIDS - INTRUSION ALARMS AT CERTAIN LOCATIONS ALONG THE PA INOPERATIVE; AND (6) DETECTION AIDS - TAMPER INDICATING DEVICES DID NOT PERFORM IN ACCORDANCE WITH SPECIFICATIONS.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO T.S. 6.8.1, OI 21 WAS NOT APPROPRIATELY IMPLEMENTED IN THAT APPROPRIATE PRECAUTIONS WERE NOT INCLUDED IN THE SHUTDOWN SECTION TO PREVENT THE SHUTDOWN OF A DIESEL GENERATOR WITH A START SIGNAL PRESENT. (8001 INFRACTION)

CONTRARY TO T.S. 6.5.1.6, VIOLATIONS OF THE T.S. IDENTIFIED IN NRC INSPECTION REPORTS DURING CALENDAR YEAR 1979 WERE NOT INVESTIGATED BY THE PORSC AS REQUIRED AS OF 1/1/80. (8001 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

MANAGERIAL ITEMS:

On July 1, 1980, the Electric Production Department will be split into Fossile Power and Nuclear Power Departments. The following are assignments to supervisory positions in the new Nuclear Power Department.

Mr. Joseph A. Tiernan becomes Department Manager.

Mr. Leon B. Russell, Chief Engineer-Nuclear Plant, becomes Plant Superintendent-Calvert Cliffs.

Mr. Robert E. Denton, Nuclear Plant Engineer-Operations, will be promoted to General Supervisor-Training and Technical Services.

Mr. Walter J. Lippold will continue as Supervisor-Nuclear Fuel Management.

Mr. Norman L. Millis joins the Company as General Supervisor-Radiation Safety.

Mr. Howard A. Eggleston, Assistant General Supervisor-Plant Services at Calvert Cliffs, has been promoted to Supervisor-Administrative Services.

Mr. John T. Carroll, Supervisor-Technical Support at Calvert Cliffs will be promoted to General Supervisor-Operations.

Mr. William S. Gibson, Nuclear Plant Engineer-Performance at Calvert Cliffs becomes General Supervisor-Electrical and Controls.

Mr. Gary E. Brobst will be promoted to Acting General Supervisor-Chemistry. Mr. Brobst presently holds the position of Chemist in the Chemical Unit of the Electric Production Department.

Mr. Richard P. Heibel will be promoted to Acting Supervisor-Technical Support. Mr. Heibel presently holds the position of Engineer in the Operations Unit at Calvert Cliffs.

PLANT STATUS:

No significant new information.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-005/03L	03/25/80	04/25/80	Unipressure valve diaphragm failure caused trip of #12 control room air conditioner. Valve replacement restored operability in 8.5 hrs.
80-016/03L	03/25/80	04/25/80	"A" wide range NI failed due to 15 VDC pwr supply failure, necessitating replacement with a spare
80-017/03L	03/26/80	04/25/80	ECCS exh filter charcoal inop due inability to remove 90% of methyliodine. The filters were replaced
80-018/03L	04/01/80	04/30/80	No. 11 control rm air conditioner OOS 5hr to repair pneumatic control system (recalibrate outside air temp xmtr)
80-019/03L	03/27/80	04/25/80	Faulty Aux Master Trip Relay caused loss of "B" load trip. The relay was replaced.
80-022/01T	04/15/80	04/25/80	Boron dilution accident with 1% S/D margin & RCS drained to middle of hot leg not analyzed for a 2% S/D margin will be maintained in that plant condition
80-023/03L	04/30/80	05/19/80	Channel B wide range nuclear instrument sur trip inoperable printed circuit board defective, replaced
80-025/04T	04/28/80	05/07/80	Oysters collected in plant environs had levels of radioactivity greater than previous background levels. Attributable to new more sensitive measurements methods

LAST IE SITE INSPECTION DATE: 5/12-23/80

INSPECTION REPORT NO: 50-317/80-09

SUMMARY

INSPECTION SUMMARY

50-317/80-04 - Mar 17-21: Review of Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging), Search, Escorting, Vital Areas; Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys, and Combinations; Records and Reports; Followup on Previous Items of Noncompliance/Deviations; and Followup on IE Bulletin No. 77-08. The inspection involved 82 hours onsite by 2 region-based inspectors. The inspection began during an offshift period; 18 inspection hours were accomplished during offshift periods. Three items of noncompliance were identified: (Failure to submit the required reports of changes to the accepted Physical Security Plan to the NRC within 10 CFR 50.54(p) specified time limits; Failure to maintain documentation of security force personnel training; and Failure to positively control access to vital areas).

PLANT STATUS

Reactor shutdown at 9:00 p.m. on May 30, 1980, to begin a scheduled 56 day refueling outage.

LAST IE SITE INSPECTION DATE: April 21-25, 1980

INSPECTION REPORT NO: 80-06

SUMMARY

INSPECTION SUMMARY

Inspection on January 14-18, 21-25, 29-31; February 11-12; March 3-5 and April 15, (80-01): Announced inspection of the licensee's implementation of the Quality Assurance Program in the following areas: QA/QC administration; qualification of personnel; design changes and modifications; records control; receipt, storage and handling; tests and experiments; procurement control; document control; offsite review committee; audits; test and measurement equipment; surveillance and calibration; maintenance; housekeeping and cleanliness; and offsite support staff. The inspection involved 361 inspecter hours onsite by five NRC inspectors. Of the 15 areas inspected, no apparent items of noncompliance or deviations were identified in 9 areas, 6 apparent items of noncompliance were identified in 5 areas (failure to maintain the equipment classification list current; failure to take prompt corrective action on audit findings; failure to establish a formal audit program for the corporate office; failure to follow housekeeping procedures; failure to maintain the master surveillance schedule current; and failure to control lifted leads).

Inspection on January 11 through March 31, (80-04): Operational safety verification including observations, log and records review, ESF system verification, security and condition reports; Licensee Event Reports (LER's); followup on unplanned releases and internal contamination of personnel; and review of small break LOCA procedures and associated documentation and training. The inspection involved 218 inspector hours by the Senior Resident Inspector, Resident Inspector and a regional based operation inspector. Of the areas inspected, two items of noncompliance were identified in one area (Internal Contamination of Personnel). No items of noncompliance or deviations were identified in the other areas inspected.

Inspection on April 21-25, (80-06): Routine, unannounced radiological environmental protection inspection, including a review of program management; a review and discussion of program results, and an observation of groundwater monitoring wells, the onsite absorption pond and various environmental sampling stations. The inspection also included visits to the Berrien County Office of Emergency Preparedness and the Saint Joseph Memorial Hospital to discuss emergency coordination. The inspection involved 32 inspector hours onsite by two NRC inspectors. For the areas inspected, no apparent items of noncompliance or deviations were identified.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-07/ 03L-0	03/26/80	04/25/80	While revising a surveillance test procedure for the Unit 1 containment spray system it was discovered that some of the valves in the system flow path were not being cycled at 31 day intervals.
80-08/ 03L-0	04/18/80	05/16/80	During the calibration of the containment atmosphere particulate radiation monitor R-11, the detector tube was found to be bad, causing this monitor to be inoperable.
80-09/ 03L-0	04/28/80	05/21/80	While performing spent fuel pit exhaust fan test, STP 028, the charcoal bed exhaust damper would not fully open.

SUMMARY

INSPECTION SUMMARY

Inspection on January 14-18, 21-25, 29-31; February 11-12; March 3-5 and April 15, (80-01): Announced inspection of the licensee's implementation of the Quality Assurance Program in the following areas: QA/QC administration; qualification of personnel; design changes and modifications; records control; receipt, storage and handling; tests and experiments; procurement control; document control; offsite review committee; audits; test and measurement equipment; surveillance and calibration; maintenance; housekeeping and cleanliness; and offsite support staff. The inspection involved 361 inspector hours onsite by five NRC inspectors. Of the 15 areas inspected, no apparent items of noncompliance or deviations were identified in 9 areas, 6 apparent items of noncompliance were identified in 5 areas (failure to maintain the equipment classification list current; failure to take prompt corrective action on audit findings; failure to establish a formal audit program for the corporate office; failure to follow housekeeping procedures; failure to maintain the master surveillance schedule current; and failure to control lifted leads).

Inspection on January 11 through March 31, (80-03): Operational safety verification including observations, log and records review, ESF system verification, security and condition reports; Licensee Event Reports (LER's); followup on unplanned releases and internal contamination of personnel; and review of small break LOCA procedures and associated documentation and training. The inspection involved 218 inspector hours by the Senior Resident Inspector, Resident Inspector and a regional based operation inspector. Of the areas inspected, two items of noncompliance were identified in one area (Internal Contamination of Personnel). No items of noncompliance or deviations were identified in the other areas inspected.

Inspection on April 21-25, (80-05): Routine, unannounced radiological environmental protection inspection, including a review of program management; a review and discussion of program results, and an observation of groundwater monitoring wells, the onsite absorption pond and various environmental sampling stations. The inspection also included visits to the Berrien County Office of Emergency Preparedness and the Saint Joseph Memorial Hospital to discuss emergency coordination. The inspection involved 32 inspector hours onsite by two NRC inspectors. For the areas inspected, no apparent items of noncompliance or deviations were identified.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-07/ 03L-0	01/29/80	02/28/80	During normal operation, while performing a surveillance test, containment isolation valve NCR-252 did not close fully.
80-08/ 03L-0	01/10/80	02/29/80	A review of a surveillance test procedure indicated that the as found data for Loop 1 channel 1, reactor coolant flow transmitter was 3.8% out of calibration.
80-18/ 03L-0	03/31/80	04/25/80	During normal operation, radiation monitor R-11 alarmed and would not reset. Investigation revealed that the sample pump for R-11 and R-12 was not providing sufficient flow.
80-19/ 03L-0	04/11/80	05/06/80	During a rapid power reduction to remove the west feed pump from service because of a faulty coupling, the axial flux difference was forced out of the plus or minus 5% target band defined in TS 3.2.1 for a period of 16 minutes.
80-20 03L-0	04/21/80	05/20/80	During normal operation, it was noticed that steam-line differential pressure between loops 1 and 2 was excessive.
80-21 03L-0	04/29/80	05/20/80	During normal operation, while performing a surveillance test, it was discovered that the bistable for steam generator water level Hi-Hi ESP setpoint (turbine trip and feedwater isolation) had drifted high exceeding the LCO value.

LAST IE SITE INSPECTION DATE: May 6 - 9, 19 - 23, 1980 *

INSPECTION REPORT NO: 50-298/80-08 *

SUMMARY

INSPECTION SUMMARY

Inspection on December 20, 1979 (80-05): As part of the inspection conducted during December 14-21, 1979 at NECO, Richland, Washington, this report details the inspection of trailer 228146. The State of Washington was represented on-site during this inspection. No package was opened. The exterior of the shielding cask was not labeled nor marked to show hazardous materials contained within. This appeared to be in violation with DOT regulation. It appears that the Department of Transportation and the NRC Region IV office are the appropriate organizations to take enforcement actions.

Inspection on April 8-11, 21-23, 29-30, 1980 (80-06): Routine, unannounced inspection of follow-up on previously identified items, quality assurance annual review, calibration, review of in-service inspection procedures, review and evaluation of in-service inspection data, follow-up on IEB 79-01B and independent inspection effort. This inspection involved 105 manhours on-site by four NRC inspectors. Within the areas inspected above no items of noncompliance or deviations were identified.

Inspection on May 6-9, 19-23, 1980 (80-08): Routine, unannounced inspection of follow-up on previously identified items, refueling activities, surveillance, surveillance of pipe supports and restraint systems, maintenance, witness of Containment Integrated Leak Rate Test, and and independent inspection effort. This inspection involved 102 man hours on-site by two NRC inspectors. Within the areas inspected above, no items of noncompliance or deviations were identified.

INSPECTION REPORT NO: 50-302/80-23

SUMMARY

INSPECTION SUMMARY

INSPECTION MARCH 31 - APRIL 11 (80-18): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 88 INSPECTOR-HOURS ON SITE IN THE AREAS OF FOLLOWUP ON BULLETIN 79-01B, FOLLOWUP ON PREVIOUS INSPECTION FINDINGS, FUEL RECEIPT DOCUMENTATION, WITNESSING OF REFUELING ACTIVITIES, AND MONITORING OF OUTAGE MAINTENANCE ACTIVITIES. OF THE FIVE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 21-25 (80-19): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 33 INSPECTOR-HOURS ON SITE IN THE AREAS OF RECORDS PROGRAM, DOCUMENT CONTROL PROGRAM AND PLANT TOUR. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (INFRACTION - FAILURE TO PROPERLY IMPLEMENT RECORD CONTROL PROGRAM; AND INFRACTION - FAILURE TO PROVIDE ADEQUATE DOCUMENT CONTROL PROGRAM FOR VENDOR MANUALS).

INSPECTION APRIL 14-19 (80-20): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 83 INSPECTOR-HOURS ON SITE IN THE AREAS OF REFUELING, FOLLOWUP ON LICENSEE IDENTIFIED ITEMS, AND TOURING THE PLANT. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 23-25 (80-21): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 17 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSTALLED EQUIPMENT REVIEW WITH RESPECT TO IE BULLETIN 79-01B RESPONSE. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 28 - MAY 2 (80-22): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 31 INSPECTOR-HOURS ON SITE. THE AREAS INSPECTED INCLUDED REFUELING AND RELATED SURVEILLANCE ACTIVITIES AND LICENSEE RESPONSE TO IE BULLETINS. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

QUALITY ASSURANCE PROCEDURE 2180 STATES AS A MINIMUM, EACH AFFECTED EXTERNAL AND INTERNAL ORGANIZATION SHALL BE AUDITED FOR COMPLIANCE WITH THE APPROPRIATE 10 CFR 50, APPENDIX B CRITERIA, NRC REGULATORY GUIDES AND ANSI STANDARDS AT LEAST ANNUALLY, OR ONCE DURING THE LIFETIME OF THE ACTIVITY, WHICHEVER IS SHORTER. CONTRARY TO THE ABOVE, THE TECHNICAL SECTION WAS NOT AUDITED SPECIFICALLY FOR NUCLEAR FUEL MANAGEMENT ACTIVITIES, DURING THE CALENDAR YEAR 1978.
(8008 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS

Fuel assembly holddown spring broken. (80-10)

PLANT STATUS

The refueling and maintenance outage continued during the month. The fuel shuffle was completed, however, on May 13, 1980 during an incore inspection a broken fuel assembly holddown spring was found. In a more detailed inspection a total of 11 broken springs were identified out of 112 fuel assemblies inspected. The licensee and B&W are investigating the causes and corrective actions.

LAST IE SITE INSPECTION DATE: April 30 through May 2, 1980

INSPECTION REPORT NO: 80-13

SUMMARY

INSPECTION SUMMARY

Inspection on March 10-14, 17-21, 24-28, 30-31; and April 1-4, (80-06): Routine, unannounced inspection of followup on previous inspection findings; Operational Safety Information Meeting with local officials, CILRT Procedure, Radiation Protection, reactor trip on March 27 and April 7, 1980, followup of Licensee Event Reports and IE Bulletin followup. The inspection involved 166 inspector hours onsite by the Resident Inspector. No items of noncompliance or deviations were identified.

Inspection on April 15-17, 29-30; May 1, 6-8 and 12-14, (80-10): Routine, unannounced inspection of preparation for a refueling outage, pre-fuel handling activities, fuel handling activities, maintenance during a refueling outage, review of previous inspection findings, review of procedure for PG-PL Woodward Governors, and followup on a licensee identified event. The inspection involved 88 inspector hours onsite by two NRC inspectors and included inspection effort conducted during offshift hours. No items of noncompliance or deviations were identified.

Inspection on April 30 through May 2, (80-13): Included a review of Protected Area Physical Barriers; Vital Area Physical Barriers; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Testing and Maintenance; Followup on Previous Items of Noncompliance. The inspection involved 66 inspector hours onsite by 3 NRC inspectors. The inspection began during day shift period; 18 inspector hours were accomplished during offshift periods. The plant is currently in a refueling outage. The licensee was found to be in compliance with NRC requirements within the seven areas examined during this inspection except for the following five items: Access Control (Identification, Authorization and Badging) - The licensee did not conduct proper personnel screening in accordance with security plan commitments; Access Control (Vital Areas) - A vital area door was found unsecured and unattended and several watchmen were not provided with adequate communication; Access Control (Search) - The licensee failed to adequately search some individuals prior to their entry into the protected area; Access Control (Escorting) - The licensee failed to properly escort several individuals; and Testing and Maintenance - The licensee failed to perform a required test of an alarm system.

PLANT STATUS

Unit 1 shutdown on October 31, 1978 for an extended outage to upgrade ECCS, chemical cleaning and refueling. Outage expected to last a minimum of 30 months.

LAST IE SITE INSPECTION DATE: April 7 through May 2, 1980

INSPECTION REPORT NO: 80-08

SUMMARY

INSPECTION SUMMARY

Inspection on March 3-5, 7, 13-14 and April 8-9, (80-08): Routine, announced inspection of radiation protection program for the Unit 1 decontamination, including: audits; training; ALARA; monitoring equipment and procedures; exposure control (external and internal); posting, labeling and control; and notification of reports. The inspection involved 73 inspector hours onsite by one NRC inspector. Of the seven areas inspected, two items of noncompliance were found in one area (failure to make an adequate evaluation to determine compliance with 10 CFR 20.106 and concentrations in excess of TS 3.8.C.2 limits were found in the discharge canal).

Inspection on April 7 through May 2, (80-08): Routine, unannounced resident inspection of operational safety verification, maintenance observation, routine surveillance observation, and inspection during long term shutdown. The inspection involved 123 inspector hours onsite by two NRC inspectors. Of the six areas inspected, there were no items of noncompliance identified in five areas. There were three items of noncompliance (failure to follow procedures; failure to adher to QA program requirements; and failure to follow procedures) in one area.

INSPECTION STATUS

ENFORCEMENT STATUS

UNIT 2 AND UNIT 3 TECHNICAL SPECIFICATIONS, SECTION 6.2.B REQUIRE THAT RADIATION CONTROL PROCEDURES BE MAINTAINED, MADE AVAILABLE TO ALL STATION PERSONNEL, AND ADHERED TO. STATION RADIATION CONTROL PROCEDURE 37-1-A-1, REQUIRES THAT EACH PERSON READ, UNDERSTAND, AND ADHERE TO THE PROVISIONS OF SPECIAL WORK PERMITS (SWP'S). CONTRARY TO THE ABOVE, DURING ROUTINE TOURS OF THE UNIT 2 CORE SPRAY/LPCI CORNER ROOMS ON MARCH 6, 1980, AND THE UNIT 2/3 REFUELING FLOOR ON MARCH 28, 1980, THE INSPECTOR OBSERVED PERSONNEL IN CONTROLLED, CONTAMINATED AREAS NOT WEARING ALL OF THE PROTECTIVE CLOTHING REQUIRED BY THE APPLICABLE SWP. (8010 INFRACTION)

INSPECTION STATUS

PLANT STATUS

Operating routinely.

LAST IE SITE INSPECTION DATE: April 7 through May 2, 1980

INSPECTION REPORT NO: 80-12

SUMMARY

INSPECTION SUMMARY

Inspection on April 10-11, (80-09): Reactor Water Clean Up (RWCU) pipe system damage due to water hammer, seismic restraint provisions for the Control Rod Drive (CRD) systems. The inspection involved 10 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

Inspection on April 15-18, (80-11): Routine, unannounced inspection of operational radiation protection program during refueling and major maintenance, including: audits; training; planning and preparation; ALARA; exposure control; posting, labeling, and control; and outage activities. The inspection involved 31 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

Inspection on April 7 through May 2, (80-12): Routine, unannounced resident inspection of operational safety verification, maintenance observation, routine surveillance observation, startup testing-refueling, major surveillance-outage. The inspection involved 123 inspector hours onsite by two NRC inspectors. Of the six areas inspected, there were no items of noncompliance identified.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-13/03L-0	03/28/80	04/22/80	During refueling outage of Unit 3, a leakage of 967.86 SCFH occurred on "B" outboard check valve.
80-16/03L-0	04/02/80	04/28/80	During leak rate test of HPCI suction line, leakage was 1,370.7 SCFH, which is in excess of TS for single containment isolation valve.
80-17/03L-0	04/04/80	04/28/80	During refueling outage, during oper. survey test, the diesel generator failed to start.
80-19/03L-0	04/20/80	05/14/80	During refueling outage performing target rock relief vlv press switch cal. surv. PS-3-203-3A tripped at 1098 psig increasing.
80-20/03L-0	04/23/80	05/14/80	During refueling outage, 3B Core Spray relief valve found leaking.
80-21/01T-0	04/25/80	05/08/80	Combinations of 3A Target Rock Valve and 3B, 3C and 3E Electromatic relief valves failed to open at rated reactor pressure.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION SECTION 6.8.2 STATES IN PART: "PROCEDURES...AND CHANGES THERETO, SHALL BE REVIEWED...AND APPROVED...PRIOR TO IMPLEMENTATION EXCEPT AS NOTED IN SECTION 6.8.3..." TECHNICAL SPECIFICATION SECTION 6.8.3 STATES IN PART: "TEMPORARY MINOR CHANGES TO PROCEDURES...WHICH DO NOT CHANGE THE INTENT...MAY BE MADE WITH THE CONCURRENCE OF TWO MEMBERS OF THE PLANT MANAGEMENT..." CONTRARY TO THE ABOVE, BETWEEN MARCH 10 AND MARCH 18, 1980, NUMEROUS CHANGES TO PROCEDURE RP83/IE-2 REVISION 1 WERE MADE WITHOUT EITHER PRIOR APPROVAL OR CONCURRENCE BY TWO MEMBERS OF THE PLANT MANAGEMENT.
(8004 INFRACTION)

TECHNICAL SPECIFICATION 3.3.1.B.2 REQUIRES, IN PART, THAT PRIOR TO RELEASE OF EACH BATCH OF LIQUID EFFLUENT, A SAMPLE SHALL BE TAKEN FROM THAT BATCH TO DETERMINE THAT CONCENTRATIONS OF GROSS RADIOACTIVITY ARE IN COMPLIANCE WITH TECHNICAL SPECIFICATION 2.3.1.B PRIOR TO RELEASE. CONTRARY TO THIS REQUIREMENT, THE RESULTS OF THE RADIOACTIVE CONCENTRATIONS OF THE EFFLUENT RELEASED TO AN UNRESTRICTED AREA WAS NOT KNOWN UNTIL AFTER THE RELEASE OCCURRED.
(8005 INFRACTION)

10 CFR 50.72 REQUIRES, IN PART, THAT EACH LICENSEE OF A NUCLEAR POWER REACTOR LICENSED UNDER 10 CFR 50.21 OR 50.22 SHALL NOTIFY THE NRC OPERATIONS CENTER AS SOON AS POSSIBLE AND IN ALL CASES WITHIN ONE HOUR BY TELEPHONE OF ANY UNPLANNED RADIOACTIVE RELEASE. CONTRARY TO THIS REQUIREMENT, NO NOTIFICATION OF AN UNPLANNED RELEASE OF APPROXIMATELY EIGHT MICROCURIES OF RADIOACTIVITY RELEASED TO AN UNRESTRICTED AREA ON MARCH 12 AND 13, 1980, WAS GIVEN TO THE NRC OPERATIONS CENTER.
(8005 INFRACTION)

TECHNICAL SPECIFICATION SECTION 6.4.2 STATES IN PART, "...FIRE BRIGADE TRAINING SESSIONS...SHALL BE HELD AT LEAST QUARTERLY." CONTRARY TO THE ABOVE, FIRE BRIGADE TRAINING HAD NOT BEEN HELD DURING THE PERIOD OF JULY 1978 TO JUNE 1979.
(8003 INFRACTION)

TECHNICAL SPECIFICATION SECTION 6.8 STATES IN PART, "DETAILED WRITTEN PROCEDURES INVOLVING NUCLEAR SAFETY...SHALL BE PREPARED...ALL PROCEDURES SHALL BE ADHERED TO." INCLUDED IN SECTION 6.8.1 IS "FIRE PROTECTION PLAN IMPLEMENTATION." CONTRARY TO THE ABOVE THE MONTHLY FIRE EXTINGUISHER INSPECTIONS REQUIRED BY THE DAEC FIRE PLAN AND INSPECTION PROCEDURE IP-013/IE-3 HAVE NOT BEEN PERFORMED FROM 1977 TO DATE.
(8003 INFRACTION)

TECHNICAL SPECIFICATION SECTION 6.8 STATES IN PART, "DETAILED WRITTEN PROCEDURES INVOLVING NUCLEAR SAFETY, INCLUDING APPLICABLE CHECK-OFF LISTS...SHALL BE PREPARED..." OPERATING INSTRUCTION NO. 53 "STANDBY LIQUID CONTROL SYSTEM" APPENDIX I INDICATED THAT AIR SPARGER, AIR INLET VALVE U-26-11 IS TO BE LOCKED CLOSED. CONTRARY TO THE ABOVE, STP 44C001 "STANDBY LIQUID CONTROL SYSTEM BORON CONCENTRATION" DOES NOT CONTAIN SUFFICIENT DIRECTION AND/OR CHECK SHEETS TO PREVENT VALVE U-26-11 FROM BEING LEFT UNLOCKED AT THE CONCLUSION OF THE PROCEDURE. THIS WAS THE CASE WHEN THE INSPECTOR OBSERVED VALVE U-26-11 TO BE UNLOCKED AFTER THE COMPLETION OF STP 44C001.
(8003 DEFICIENCY)

10 CFR 50, APPENDIX B, CRITERIA XVI, "CORRECTIVE ACTION" STATES IN PART..."MEASURES SHALL BE ESTABLISHED TO ASSURE THAT CONDITIONS ADVERSE TO QUALITY...ARE PROMPTLY IDENTIFIED AND CORRECTED..." IOWA ELECTRIC QUALITY DIRECTIVE 1316.1 "CORRECTIVE ACTION" STATES: "SYSTEMS SHALL BE IMPLEMENTED TO ASSURE THAT CONDITIONS ADVERSE TO QUALITY ARE PROMPTLY IDENTIFIED AND CORRECTED AS SOON AS POSSIBLE." CONTRARY TO THE ABOVE, BETWEEN MARCH 10 AND MARCH 18, 1980 NUMEROUS ITEMS WERE IDENTIFIED, DURING QC INSPECTIONS DEALING WITH FAILURE TO FOLLOW PROCEDURE RP83/IE-2 REVISION 1, WITH NO PROMPT CORRECTIVE ACTION BEING TAKEN TO CORRECT THE SITUATION.
(8004 INFRACTION)

PLANT STATUS

Unit operating routinely after repair of Recirculation Motor-Generator Set Motor. The unit had operated for approximately one week on a single recirc. loop.

LAST IE SITE INSPECTION DATE: March 24-26; April 10-12 and 22-25, 1980

INSPECTION REPORT NO: 80-07

SUMMARY

INSPECTION SUMMARY

Inspection on March 18-21, (80-04): Routine, unannounced inspection of refueling maintenance activities. Also follow-up on unplanned release of radioactive material from the site. The inspection involved 29 inspector hours onsite by two NRC inspectors and 4 inspector hours at the corporate office by one NRC inspector. Of the areas inspected, two items of noncompliance (failure to review and approve temporary procedure changes and failure to take prompt corrective action on items identified during QC inspections) were identified.

Inspection on April 7-11, (80-06): Review of specifications and procedures, observation of work, and review of documentation for Internal Torus Modifications; review of ultrasonic examination records of jet pump beams. The inspection involved 32 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

Inspection on March 24-26; April 10-12 and 22-25, (80-07): The inspection was broken into two segments. First was a special unannounced inspection and subsequent followup on Small Break Loss of Coolant Accident (SBLOCA) and High Energy Line Break Outside Containment (HELB) procedures and training; modifications to containment isolation logic required by IE Bulletins 79-05, 79-06, and 79-08; and followup on progress in regard to IE Bulletin 79-01B (March 24-26 and April 10-12, 1980). The second segment was a routine, unannounced inspection of facility operations, IE Circular followup and OII followup. The inspection involved 140 inspector hours onsite by 5 NRC inspectors and 12 inspector hours offsite by 3 NRC inspectors. In the areas inspected, no items of noncompliance were identified.

SUMMARY

INSPECTION SUMMARY

INSPECTION APRIL 21-25 (80-09): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 70 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIOACTIVE WASTE MANAGEMENT FOR UNIT 2 INCLUDING THE INSTALLATION OF THE LIQUID AND GASEOUS WASTE SYSTEMS, REVIEW OF PREOPERATIONAL TEST PROCEDURES, INSTALLATION OF PROCESS AND EFFLUENT MONITORS, CHEMISTRY AND HEALTH PHYSICS PROCEDURES AND HEALTH PHYSICS AND SECURITY TRAINING FOR NEW EMPLOYEES AND CONTRACTORS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MARCH 31 - APRIL 25 (80-10): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 155 INSPECTOR-HOURS ON SITE IN THE AREAS OF HOT FUNCTIONAL TESTING, PRE-OPERATIONAL TESTING, UNIT 2 PLANT TESTING STATUS, UNIT 2 PLANT TOUR, UNIT 1 PLANT OPERATION, REVIEW OF LICENSEE EVENT REPORTS, IEB FOLLOWUP, PLANT SECURITY, OPEN ITEMS, AND REVIEW OF ADMINISTRATIVE CONTROLS. OF THE TEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO THE JAMES A. FITZPATRICK SECURITY PLAN, A BADGED NON-REGULAR EMPLOYEE WAS NOT PROPERLY SEARCHED. (8002 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS (PLANS AND PROCEDURES):

Mark I torus modifications are in progress.

MANAGERIAL ITEMS:

Mr. P. Bayne assumed the position of Sr. Vice President Nuclear Generation on May 29, 1980. The position was vacated on May 28, 1980 by Mr. P. Lyon.

PLANT STATUS:

The facility is currently in a 65 day refueling outage which began on May 12, 1980.

LAST IE SITE INSPECTION DATE: 5/23/80

INSPECTION REPORT NO: 50-333/80-09

SUMMARY

INSPECTION SUMMARY

50-333/80-04 - Mar 31-Apr 4: Routine, unannounced inspection of plant operations as part of a turnover of NRC Principle/Resident Inspectors, licensee progress on pipe hanger installations and modifications and licensee action on previous inspection items. This inspection also included an independent review of the instrumentation required to be environmentally qualified in accordance with IE Bulletin 79-01B. The inspection involved 91.5 hours onsite by two region-based inspectors and one resident inspector trainee and 10 hours onsite by one Reactor Projects Section Chief. No items of noncompliance were identified.

50-333/80-05 - Apr 7-11: Routine, unannounced inspection by a regionally-based inspector (37 hours) of licensee action on previous inspection findings; administrative control of safety related calibrations; surveillance calibrations of safety related components and equipment required by Technical Specifications; calibrations required by Technical Specifications of components and equipment associated with safety related systems and/or functions; calibration and control of test equipment; witnessing of calibrations; technician qualifications; and, facility tour. Three items of noncompliance were identified: (Failure to perform periodic review of procedures; Failure to follow administrative procedures; and Failure to adequately implement calibration program for safety related instruments).

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TS 4.6.1 LCO, BOTH DIESEL GENERATOR DAY TANKS CONTAINED LESS THAN THE REQUIRED 500 GALLONS WHILE THE REACTOR WAS OPERATED AT POWER.
(8008 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

Areas related to potential equipment modification, which are under review and discussion with the NRC include: helium circulator auxiliaries; accident analysis relating to outlet temperature dispersion and orifice settings; hangers for 2" and smaller piping; and plant oscillations.

FACILITY ITEMS (PLANS AND PROCEDURES):

IMPLEMENTATION OF 10 CFR 73.55 PROVISIONS WERE IN EFFECT 3/21/80.

MANAGERIAL ITEMS:

PLANT STATUS:

Plant is operating at 50% power.

LAST IE SITE INSPECTION DATE: April 1-30, 1980

INSPECTION REPORT NO: 50-267/80-08

SUMMARY

INSPECTION SUMMARY

Inspection April 15-18, 1980 (80-09): Routine, unannounced inspection of procedures; surveillance of pipe support and restraint systems; maintenance program; and plant tour. No items of noncompliance or deviations were identified.

Inspection April 1-30, 1980 (80-08): Routine, announced inspection of Review of Previous Items of Noncompliance; Surveillance; Maintenance; Operational Safety Verification; and Review of Bulletins/Circulars. Within the five (5) areas inspected, one item of noncompliance was identified (infraction - failure to meet Technical Specification for Diesel Generator Day Tank Levels)

NRC POWER RESTRICTIONS: Restricted to 70% of Licensed Thermal Power.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-19 03L-0	3/27/80	4/25/80	Total oxidants greater than 10 ppm with avg. core outlet temperature greater than 1200 Deg F and primary coolant dewpoint greater than allowed by Technical Specification. Degraded modes of T/S L.C.O. 4.2.10 and 4.2.11, respectively.
80-20 03L-0	4/18/80	5/15/80	Two of twelve Helium Circulator Seal malfunction pressure differential switches tripped outside of L.C.O. 4.4.1 limits
80-21 03L-0	4/21/80	5/21/80	One channel of plant protective system's low Main Steam pressure scram found inoperable. Degraded mode of L.C.O. 4.4.1.
80-22 03L-0	4/24/80	5/22/80	Total oxidants greater than 10 ppm with average core outlet temperature greater than 1200 Deg F. Degraded mode of L.C.O. 4.2.10.

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

MANAGERIAL ITEMS:

A management meeting was held at the Ginna Nuclear Power Station on May 15, 1980 to discuss the Systematic Assessment of Licensee Performance (SALP).

PLANT STATUS:

Completed the scheduled refueling outage on May 23, 1980 and at 11:30 PM the station was placed back in service.

LAST IE SITE INSPECTION DATE: 5/15/80

INSPECTION REPORT NO: 50-244/80-07

SUMMARY

INSPECTION SUMMARY

50-244/80-03 - Apr 21-25: Routine, unannounced inspection by one regionally-based inspector (32 hrs.) of refueling and outage activities, including preparations for refueling and previous inspection findings. No items of noncompliance were identified.

50-244/80-05 - Apr 21-25: Unannounced physical protection inspection by one regionally-based inspector (28 hrs.). Included a review of Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control, Identification, Authorization and Badging, Search, Escorting, Vital Areas; Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply, Response, Locks, Keys and Combinations; Records and Reports; Followup on Previous Items of Noncompliance; Followup on IE Bulletin No. 79-16. No items of noncompliance were identified.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-003/01T	04/14/80	04/28/80	Results of eddy current testing of steam generators revealed 34 tubes in B generator w/pluggable indications and 1 tube in the A generator
80-004/01T	05/06/80	05/19/80	With the plant in cold shutdown the DC power supply to both PORV's was found to be off rendering both PORV's inoperable; this event is in violation of Tech Spec 3.15.

INSPECTION STATUS

ENFORCEMENT STATUS

FAILURE TO FOLLOW PROCEDURES FOR DOCUMENTING SECURITY INCIDENTS.
(8003 INFRACTION)

A VITAL AREA BARRIER DID NOT MEET THE LICENSEE'S SPECIFICATIONS.
(8003 INFRACTION)

ACCESS CONTROL VITAL AREA.
(8003 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 4.5.E.2, THE HIGH PRESSURE COOLANT INJECTION SYSTEM (HPCI) IS TO BE PROVEN OPERABLE IMMEDIATELY WHEN THE REACTOR CORE ISOLATION COOLANT SYSTEM (RCIC) IS FOUND TO BE INOPERABLE. TECHNICAL SPECIFICATION 3.5.E.3 REQUIRES THAT THE REACTOR BE SHUTDOWN AND DEPRESSURIZED WITHIN 24 HOURS IF HPCI IS NOT PROVEN OPERABLE. AND AS REPORTED BY THE LICENSEE, HPCI WAS NOT PROVEN OPERABLE FOR APPROXIMATELY 25 HOURS FOLLOWING A RCIC SYSTEM FAILURE ON DECEMBER 8, 1979. PLANT OPERATION CONTINUED THROUGHOUT THIS INTERVAL. THE FAILURE TO TAKE REQUIRED ACTIONS WAS DUE TO PERSONNEL ERROR.
(8004 INFRACTION)

FAILURE TO MAINTAIN LIGHTING EQUIPMENT AS COMMITTED TO IN THE SECURITY PLAN.
(8016 DEFICIENCY)

FAILURE TO PROPERLY CONTROL ALL POINTS OF PERSONNEL ACCESS INTO VITAL AREAS AND TO VITAL EQUIPMENT.
(8016 INFRACTION)

FAILED TO TAKE CORRECTIVE ACTION TO PREVENT REPETITIVE VIOLATIONS OF SECONDARY CONTAINMENT.
(8017 INFRACTION)

FAILURE TO MAKE 24 HOUR AND 30 DAY REPORTS TO THE NRC AS REQUIRED BY TECHNICAL SPECIFICATIONS.
(8017 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.5.2.8.E, AUDITS OF UNIT ACTIVITIES, INCLUDING THE EMERGENCY PLAN AND IMPLEMENTING PROCEDURES AT LEAST ONCE PER 24 MONTHS, SHALL BE PERFORMED UNDER THE COGNIZANCE OF THE SAFETY REVIEW BOARD. APPENDIX F OF THE EMERGENCY PLAN DEFINES THE EMERGENCY PROCEDURES THAT HAVE BEEN ESTABLISHED TO IMPLEMENT THE EMERGENCY PLAN. AN AUDIT OF THE EMERGENCY IMPLEMENTING PROCEDURES WAS NOT CONDUCTED UNDER THE COGNIZANCE OF THE SAFETY REVIEW BOARD DURING THE PERIOD OCTOBER 1977 TO APRIL 1980.

SUMMARY

INSPECTION SUMMARY

INSPECTION MARCH 8 - APRIL 11 (80-17): THIS INSPECTION INVOLVED 45 INSPECTOR-HOURS ON SITE IN THE AREAS OF TECHNICAL SPECIFICATION COMPLIANCE, REPORTABLE OCCURRENCES, HOUSEKEEPING, OPERATOR PERFORMANCE, OVERALL PLANT OPERATIONS, QUALITY ASSURANCE PRACTICES, STATION AND CORPORATE MANAGEMENT PRACTICES, CORRECTIVE AND PREVENTATIVE MAINTENANCE ACTIVITIES, SITE SECURITY PROCEDURES, RADIATION CONTROL ACTIVITIES AND SURVEILLANCE ACTIVITIES. OF THE ELEVEN AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN NINE AREAS; TWO ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (INFRACTION - FAILURE TO TAKE EFFECTIVE CORRECTIVE ACTION ON SECONDARY CONTAINMENT DOORS (THIS IS A REPEAT ITEM); AND INFRACTION - FAILURE TO REPORT TO THE NRC).

INSPECTION APRIL 21-25 (80-19): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 24 INSPECTOR-HOURS ON SITE IN THE AREAS OF COORDINATION WITH OUTSIDE SUPPORT AGENCIES; EMERGENCY FACILITIES, EQUIPMENT AND PROCEDURES; EMERGENCY TRAINING; EMERGENCY DRILLS; EMERGENCY PLANNING AUDITS; FOLLOWUP ON IE BULLETINS AND FOLLOWUP ON PREVIOUSLY IDENTIFIED INSPECTION FINDINGS. OF THE SEVEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SIX AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO AUDIT THE EMERGENCY IMPLEMENTING PROCEDURES EVERY TWO YEARS UNDER THE COGNIZANCE OF THE SAFETY REVIEW BOARD).

INSPECTION APRIL 15-18 (80-21): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 12 INSPECTOR-HOURS ON SITE IN THE AREAS OF SURVEILLANCE ACTIVITY ON PIPE SUPPORT AND RESTRAINT SYSTEMS, INCLUDING EXAMINATION OF PROCEDURES TEST RESULTS AND INSTALLED RESTRAINTS, AND EXAMINATION OF RECORDS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 12 - MAY 12 (80-22): THIS INSPECTION INVOLVED 47 INSPECTOR-HOURS ON SITE IN THE AREAS OF TECHNICAL SPECIFICATION COMPLIANCE, REPORTABLE OCCURRENCES, HOUSEKEEPING, OPERATOR PERFORMANCE, OVERALL PLANT OPERATIONS, QUALITY ASSURANCE PRACTICES, STATION AND CORPORATE MANAGEMENT PRACTICES, CORRECTIVE AND PREVENTATIVE MAINTENANCE ACTIVITIES, SITE SECURITY PROCEDURES, RADIATION CONTROL ACTIVITIES, IE BULLETINS AND SURVEILLANCE ACTIVITIES. OF THE TWELVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

80-13	05/13/80	F	20.5	A	3		CD	ZZZZZZ	RX SCRAM ON MSIV NOT FULL OPEN WHILE PERFORMING MSIV EXERCISE.
80-14	05/14/80	F	.0	H	5		MB	ZZZZZZ	HOLDING LOAD DUE TO HIGH AIRBORNE ACTIVITY.
80-15	05/17/80	S	.0	B	5		ZZ	CONROD	REDUCTION TO PERFORM WEEKLY TURBINE TEST AND DO ROD PATTERN ADJUSTMENTS.
80-16	05/20/80	F	8.1	A	3		EC	XXXXXX	RX SCRAM ON EHC DC LOSS.
80-17	05/20/80	F	.5	A	1		HC	ZZZZZZ	GEN OFF LINE DUE TO LOSS OF CONDENSER VACUUM THEN ON LINE AT REDUCED LOAD.
80-18	05/24/80	F	172.6	A	3	1-80-53	CF	VALVEX	SHUTDOWN DUE TO INOP. RHR VALVE E11-F017.

SUMMARY

THE REACTOR OPERATED AT FULL POWER UNTIL 05/13/80, WHEN THE UNIT SCRAMMED WHILE TESTING THE MSIV. AFTER RETURNING TO SERVICE, POWER WAS REDUCED DUE TO HIGH AIR ACTIVITY. LOAD WAS REDUCED ON 05/17/80 FOR ROD ADJUSTMENT. THE REACTOR RAN NORMALLY, EXCEPT FOR A LOSS OF DC POWER SCRAM ON THE 20TH, UNTIL 05/24/80, WHEN THE UNIT WAS SHUTDOWN FOR RHR VALVE REPAIR.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 3.1.4.2.B, ONCE CONTROL ROD WITHDRAWAL HAS STARTED AND THERMAL POWER IS LESS THAN 20% OF RATED POWER, CONTROL ROD MOVEMENT IS NOT PERMITTED EXCEPT BY SCRAM WITH THE ROD SEQUENCE CONTROL SYSTEM (RSCS) INOPERABLE. CONTRARY TO THE ABOVE, ON JANUARY 29, 1980, AFTER AN OUT OF SEQUENCE SITUATION WAS DISCOVERED AT APPROXIMATELY 10% POWER, THE LICENSEE BYPASSED ALL GROUP A 3/4 RODS FULL-IN MAKING THE PORTION OF THE RSCS SYSTEM INOPERABLE IN ORDER TO WITHDRAW A GROUP 2 ROD WHICH HAD BEEN ERRONEOUSLY LEFT INSERTED. ALSO ON JANUARY 29, 1980, A REACTOR STARTUP CONTINUED FROM GROUP 5 TO GROUP 7 CONTROL RODS WHILE IT WAS KNOWN TO THE OPERATOR THAT THE GROUP NOTCH CONTROL MODE OF RSCS WAS INOPERATIVE.
(8011 INFRACTION)

AS REQUIRED BY TS 6.8.2, CHANGES TO PLANT PROCEDURES SHALL BE REVIEWED BY THE PLANT REVIEW BOARD (PRB) AND APPROVED BY THE PLANT MANAGER PRIOR TO IMPLEMENTATION. TS 6.8.3 ALLOWS TEMPORARY CHANGES TO PROCEDURES PROVIDED THE INTENT OF THE ORIGINAL PROCEDURE IS NOT ALTERED, THE CHANGE IS DOCUMENTED, REVIEWED BY THE PRB AND APPROVED BY THE PLANT MANAGER WITHIN 14 DAYS. CONTRARY TO THE ABOVE, ON JANUARY 29, 1980 THE LICENSEE RESTORED TWO OUT OF SEQUENCE RODS TO THEIR REQUIRED POSITIONS WHILE AT 10% POWER WHICH CHANGED THE INTENT OF HNP-2-9207, ROD MOVEMENT SEQUENCES, WHICH REQUIRES ROD WITHDRAWAL IN A PREDETERMINED, CONSECUTIVE ORDER. THIS CHANGE WAS NOT DOCUMENTED AS A TEMPORARY CHANGE OR A CHANGE REQUIRING PRIOR APPROVAL.
(8011 INFRACTION)

AS REQUIRED BY TS 6.9.1.8.F, ANY PERSONNEL ERROR OR PROCEDURAL INADEQUACY WHICH PREVENTS OR COULD PREVENT, BY ITSELF, THE FULFILLMENT OF THE FUNCTIONAL REQUIREMENTS OF SYSTEMS REQUIRED TO COPE WITH ACCIDENTS ANALYZED IN THE SAR IS REQUIRED TO BE REPORTED WITHIN 24 HOURS TO THE DIRECTOR OF THE REGIONAL OFFICE. CONTRARY TO THE ABOVE, ON JANUARY 29, 1980, THE EXISTENCE OF AN OUT OF SEQUENCE ROD PATTERN INVOLVING TWO CONTROL RODS AT APPROXIMATELY 10% POWER WHICH NEITHER THE ROD WORTH MINIMIZER, THE ROD SEQUENCE CONTROL SYSTEM, PROCEDURAL CONTROLS, NOR OPERATOR ALERTNESS PREVENTED, WAS NOT REPORTED BY THE LICENSEE. THE ABOVE TWO SAFETY SYSTEMS IMPOSE RESTRICTIONS ON ROD PATTERNS TO MITIGATE A ROD DROP ACCIDENT.
(8011 INFRACTION)

FAILURE TO MAINTAIN LIGHTING EQUIPMENT AS COMMITTED TO IN THE SECURITY PLAN.
(8016 DEFICIENCY)

FAILURE TO PROPERLY CONTROL ALL POINTS OF PERSONNEL ACCESS INTO VITAL AREAS AND TO VITAL EQUIPMENT.
(8016 INFRACTION)

FAILED TO TAKE CORRECTIVE ACTION TO PREVENT REPETITIVE VIOLATIONS OF SECONDARY CONTAINMENT.
(8017 INFRACTION)

FAILURE TO MAKE 24 HOUR AND 30 DAY REPORTS TO THE NRC AS REQUIRED BY TECHNICAL SPECIFICATIONS.
(8017 INFRACTION)

CONTRARY TO TS 6.8.1, THE LICENSEE'S TESTS OF THE MODIFIED RSCS WERE INADEQUATE TO REVEAL INSTALLATION ERRORS WHICH RENDERED THE RSCS INOPERABLE.
(8018 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.5.2.8.E, AUDITS OF UNIT ACTIVITIES, INCLUDING THE EMERGENCY PLAN AND IMPLEMENTING PROCEDURES AT LEAST ONCE PER 24 MONTHS, SHALL BE PERFORMED UNDER THE COGNIZANCE OF THE SAFETY REVIEW BOARD. APPENDIX F OF THE EMERGENCY PLAN DEFINES THE EMERGENCY PROCEDURES THAT HAVE BEEN ESTABLISHED TO IMPLEMENT THE EMERGENCY PLAN. AN AUDIT OF THE EMERGENCY IMPLEMENTING PROCEDURES WAS NOT CONDUCTED UNDER THE COGNIZANCE OF THE SAFETY REVIEW BOARD DURING THE PERIOD OCTOBER 1977 TO APRIL 1980.
(8019 INFRACTION)

ENFORCEMENT STATUS

FAILURE TO FOLLOW PROCEDURES FOR DOCUMENTING SECURITY INCIDENTS.
(8003 INFRACTION)

A VITAL AREA BARRIER DID NOT MEET THE LICENSEE'S SPECIFICATIONS.
(8003 INFRACTION)

ACCESS CONTROL - VITAL AREA.
(8003 INFRACTION)

AS REQUIRED BY CRITERION VI OF APPENDIX B TO 10 CFR 50 AND AS DESCRIBED IN THE FINAL SAFETY ANALYSIS REPORT, SECTION 17.2.6.3, MEASURES SHALL BE ESTABLISHED TO CONTROL THE ISSUANCE OF DRAWING CHANGES WHICH ASSURE THAT THESE CHANGES ARE DISTRIBUTED TO AND USED AT THE LOCATION WHERE THE PRESCRIBED ACTIVITY IS PERFORMED. CONTRARY TO THE ABOVE, ON MARCH 4, 1980, DURING A SPOT CHECK OF UNIT 2 DRAWINGS MAINTAINED IN THE CONTROL ROOM, 16 OF 30 DRAWINGS CHECKED WERE NOT THE CURRENT REVISION AND WERE ROUTINELY BEING USED IN THE CONDUCT OF PLANT OPERATIONS.
(8011 INFRACTION)

AS REQUIRED BY TS 3.1.3.7.A.2, CONTROL RODS MAY BE BYPASSED IN THE ROD SEQUENCE CONTROL SYSTEM IF THE CONTROL ROD REED SWITCH FULL-IN AND/OR FULL-OUT POSITION INDICATORS ARE INOPERABLE. CONTRARY TO THE ABOVE, ON JANUARY 28, 1980, CONTROL RODS 46-43 AND 14-43 WERE BYPASSED FULL OUT WITH OPERABLE REED SWITCH POSITION INDICATORS TO FACILITATE ROD SELECTION DURING A REACTOR STARTUP. ALSO ON JANUARY 29, 1980, ALL GROUP A 3/4 RODS WERE BYPASSED WITH OPERABLE REED SWITCH POSITION INDICATORS TO RESTORE MISPOSITIONED CONTROL ROD 46-43 TO ITS PROPER POSITION IN ORDER TO CONTINUE A PLANT STARTUP.
(8011 INFRACTION)

AS REQUIRED BY TS 3.1.3.7.A.2.B, A CONTROL ROD WHICH IS BYPASSED IN THE ROD SEQUENCE CONTROL SYSTEM IS REQUIRED TO BE MOVED TO THE CORRECT POSITION IN THE PROPER SEQUENCE IN ORDER TO CONTINUE REACTOR OPERATION. TS 6.8 REQUIRES THAT WRITTEN PROCEDURES SHALL BE ESTABLISHED AND IMPLEMENTED. HATCH NUCLEAR PLANT PROCEDURE HNP-2-9207, ROD MOVEMENT SEQUENCES, REQUIRES THAT CONTROL RODS BE MOVED IN THE PROPER SEQUENCE. CONTRARY TO THE ABOVE, DURING A REACTOR STARTUP COMMENCING ON JANUARY 28, 1980, THE REACTOR WAS TAKEN TO POWER WITH CONTROL ROD 46-43 LEFT FULLY INSERTED AND BYPASSED IN THE ROD SEQUENCE CONTROL SYSTEM RATHER THAN FULLY WITHDRAWN AND CONTROL ROD 10-47 LEFT AT NOTCH 12 RATHER THAN FULLY WITHDRAWN DUE TO PERSONNEL ERRORS.
(8011 INFRACTION)

LAST IE SITE INSPECTION DATE: APRIL 12 - MAY 12, 1980

INSPECTION REPORT NO: 50-366/80-22

SUMMARY

INSPECTION SUMMARY

INSPECTION MARCH 8 - APRIL 11 (80-17): THIS INSPECTION INVOLVED 45 INSPECTOR-HOURS ON SITE IN THE AREAS OF TECHNICAL SPECIFICATION COMPLIANCE, REPORTABLE OCCURRENCES, HOUSEKEEPING, OPERATOR PERFORMANCE, OVERALL PLANT OPERATIONS, QUALITY ASSURANCE PRACTICES, STATION AND CORPORATE MANAGEMENT PRACTICES, CORRECTIVE AND PREVENTATIVE MAINTENANCE ACTIVITIES, SITE SECURITY PROCEDURES, RADIATION CONTROL ACTIVITIES AND SURVEILLANCE ACTIVITIES. OF THE ELEVEN AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN NINE AREAS; TWO ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (INFRACTION - FAILURE TO TAKE EFFECTIVE CORRECTIVE ACTION ON SECONDARY CONTAINMENT DOORS (THIS IS A REPEAT ITEM); AND INFRACTION - FAILURE TO REPORT TO THE NRC).

INSPECTION APRIL 21-25 (80-19): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 24 INSPECTOR-HOURS ON SITE IN THE AREAS OF COORDINATION WITH OUTSIDE SUPPORT AGENCIES; EMERGENCY FACILITIES, EQUIPMENT AND PROCEDURES; EMERGENCY TRAINING; EMERGENCY DRILLS; EMERGENCY PLANNING AUDITS; FOLLOWUP ON IE BULLETINS AND FOLLOWUP ON PREVIOUSLY IDENTIFIED INSPECTION FINDINGS. OF THE SEVEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SIX AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO AUDIT THE EMERGENCY IMPLEMENTING PROCEDURES EVERY TWO YEARS UNDER THE COGNIZANCE OF THE SAFETY REVIEW BOARD).

INSPECTION APRIL 15-18 (80-21): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 12 INSPECTOR-HOURS ON SITE IN THE AREAS OF SURVEILLANCE ACTIVITY ON PIPE SUPPORT AND RESTRAINT SYSTEMS, INCLUDING EXAMINATION OF PROCEDURES TEST RESULTS AND INSTALLED RESTRAINTS, AND EXAMINATION OF RECORDS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 12 - MAY 12 (80-22): THIS INSPECTION INVOLVED 47 INSPECTOR-HOURS ON SITE IN THE AREAS OF TECHNICAL SPECIFICATION COMPLIANCE, REPORTABLE OCCURRENCES, HOUSEKEEPING, OPERATOR PERFORMANCE, OVERALL PLANT OPERATIONS, QUALITY ASSURANCE PRACTICES, STATION AND CORPORATE MANAGEMENT PRACTICES, CORRECTIVE AND PREVENTATIVE MAINTENANCE ACTIVITIES, SITE SECURITY PROCEDURES, RADIATION CONTROL ACTIVITIES, IE BULLETINS AND SURVEILLANCE ACTIVITIES. OF THE TWELVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 20.203(C)(1), "CAUTION SIGNS, LABELS, SIGNALS AND CONTROLS," REQUIRES THAT EACH HIGH RADIATION AREA BE CONSPICUOUSLY POSTED WITH A SIGN OR SIGNS BEARING THE RADIATION CAUTION SYMBOL AND THE WORDS "CAUTION - HIGH RADIATION AREA." CONTRARY TO THIS REQUIREMENT, ON MARCH 26, 1980 THE HIGH LEVEL RADIOACTIVE WASTE STORAGE VAULT WAS NOT CONSPICUOUSLY POSTED WITH A SIGN OR SIGNS BEARING THE WORDS: "CAUTION - HIGH RADIATION AREA." THIS MATTER WAS CORRECTED AT THE TIME OF THE INSPECTION.
(8001 INFRACTION)

10 CFR 20.203(C)(2)(III), "CAUTION SIGNS, LABELS, SIGNALS, AND CONTROLS," REQUIRES THAT IN THE ABSENCE OF CERTAIN CONTROL DEVICES EACH ENTRANCE OR ACCESS POINT TO A HIGH RADIATION AREA SHALL BE MAINTAINED LOCKED EXCEPT DURING PERIODS WHEN ACCESS TO THE AREA IS REQUIRED WITH POSITIVE CONTROL OVER EACH INDIVIDUAL ENTRY. (1) CONTRARY TO THIS REQUIREMENT, ON MARCH 26, 1980 THE SOUTH ENTRANCE DOOR TO THE RESIN REGENERATION ROOM WAS UNLOCKED AND POSITIVE CONTROL OVER EACH INDIVIDUAL ENTRY HAD NOT BEEN ESTABLISHED. THE GENERAL AREA DOSE RATE INSIDE THE ROOM WAS MEASURED TO BE 150 MREM/HR. (2) CONTRARY TO THIS REQUIREMENT, ON MARCH 26, 1980 A PERMANENTLY INSTALLED LADDER PROVIDED ACCESS TO A HIGH RADIATION AREA NEAR WASTE RECEIVER TANK NO. 2. THE MEASURED DOSE RATE NEAR THIS TANK WAS 800 MREM/HR.
(8001 INFRACTION)

10 CFR 20.203(F)(1) AND (2), "CAUTION SIGNS, LABELS, SIGNALS AND CONTROLS," REQUIRES THAT EACH CONTAINER OF LICENSED MATERIAL SHALL BEAR A LABEL SHOWING THE RADIATION CUATION SYMBOL, THE WORDS, "CAUTION - RADIOACTIVE MATERIAL," AND IDENTIFICATION OF THE RADICACTIVE CONTENTS. CONTRARY TO THIS REQUIREMENT, ON MARCH 26, 1980, TWO 4' X 4' X 8' WOOD BOXES LOCATED IN THE RESTRICTED AREA NORTH OF THE REFUELING BUILDING CONTAINED AN ESTIMATED TWO MILLICURIES EACH OF LICENSED MATERIALS AND DID NOT BEAR A LABEL.
(8001 DEFICIENCY)

INSPECTION STATUS

SYSTEMS AND COMPONENT PROBLEMS:

None.

FACILITY ITEMS (PLANS AND PROCEDURES):

The plant has been shut down since July 1976.

Several items remaining to be completed during the outage have been deferred pending resolution of the seismic issues at the plant site. A date for return to operations has not been established.

MANAGERIAL ITEMS:

None

PLANT STATUS:

Plant is shutdown.

3. SUMMARY

INSPECTION SUMMARY

- None conducted.

LICENSE STATUS

The unit produced electricity to the expiration date (October 31, 1974) of delay granted by the AEC for installation of an ECCS system. The ECCS system was not subsequently installed and the unit was defueled on January 30, 1976.

On February 11, 1980, the NRC requested the utility to show cause as to why the operating authority of the license should not be revoked and why the licensee should not submit a plan within 120 days of this order to decommission the unit.

On June 19, 1980, an order was issued by the NRC to revoke the operating authority for Indian Point Station, Unit 1, as an electrical generating facility. Consolidated Edison Company of New York, Inc. is to submit a decommissioning plan for Unit 1 within 120 days.

INSPECTION REPORT NO: 50-286/80-07

SUMMARY

INSPECTION SUMMARY

50-286/79-29 - Nov 25, 1979 - Jan 19, 1980: Routine, unannounced inspection by the resident inspectors (99 hrs) of plant operations: log and record review; tours of the facility; observation of physical security; radiation protection observation; pipe support and restraint systems review; emergency planning meetings; maintenance activities; refueling surveillance-preparation for plant startup; and seismic event review. Two items of noncompliance: (Failure to properly evaluate surveillance results; and Failure to evaluate and resolve discrepancies noted during a Containment Inspection).

50-286/80-04 - Mar 12-14: Routine, announced inspection by one regionally-based inspector (17 hrs) of the fire prevention/protection program pertaining to fire protection modifications outlined in Amendment 24 to License No. DPR-64 including: fire brigade training, manual fire fighting equipment, and administrative procedures. No items of noncompliance were identified.

PLANT STATUS

The plant is presently shutdown for refueling and is expected to return to power about June 20, 1980.

LAST IE SITE INSPECTION DATE: April 21-24, 1980

INSPECTION REPORT NO: 80-08

SUMMARY

INSPECTION SUMMARY

Inspection on March 24-28, (80-06): Routine, announced inspection of the licensee's Small Break LOCA emergency procedures, to determine compliance with the operator guidelines submitted by Westinghouse and as approved by the NRC Staff by letter dated November 5, 1979 to Mr. Cordell Reed, Chairman of Westinghouse Owner's Group from Mr. D. F. Ross, Jr., Director, Bulletins and Orders Task Force. The inspection also included the reviews of systems utilized in the event of a Small Break Loss of Coolant Accident. The inspection involved 35 inspector hours onsite by one NRC inspector. An NRC inspector in training was also onsite March 24-28, 1980. Of the three areas inspected, no items of noncompliance or deviations were found in two areas; one item of apparent deviation was identified in one area (failure to implement approved Westinghouse guidelines).

Inspection on April 21-25, (80-08): Routine, unannounced inspection of plant operations, fire protection/prevention program, nonroutine events, and IE Bulletin and Circular followup. The inspection involved 28 inspector hours onsite by one NRC inspector. The inspector was accompanied by two NRC inspectors in training. No items of noncompliance or deviations were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

Two spurious reactor trips occurred because of noise spikes in the reactor protection system. Concern over increasing core pressure drop has resulted in two attempts at chemical cleaning of the core to reduce crud buildup on fuel pins. One steam generator non-return valve is not operating. The plant is now in cold shutdown for repair of this valve.

PLANT STATUS:

Shutdown on 5/30/80 was to repair the No. one non-return valve, replace the No. 2 reactor coolant pump seal, trouble-shoot the reactor protection system, and perform chemical cleaning of the core.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50, APP B, CRITERION XVI, STATES IN PART: "MEASURES SHALL BE ESTABLISHED TO ASSURE THAT CONDITIONS ADVERSE TO QUALITY, SUCH AS FAILURES, MALFUNCTIONS, DEFICIENCIES, DEVIATIONS, DEFECTIVE MATERIAL & EQUIPMENT, & NONCONFORMANCES ARE PROMPTLY IDENTIFIED & CORRECTED. IN CASE OF SIGNIFICANT CONDITIONS ADVERSE TO QUALITY...THE CAUSE OF THE CONDITION, & THE CORRECTIVE ACTION TAKEN SHALL BE DOCUMENTED & REPORTED TO APPROPRIATE LEVELS OF MANAGEMENT. CONTRARY TO THE ABOVE, AS OF 1/3/80, MEASURES HAD NOT BEEN ESTABLISHED TO ASSURE THAT CONDITIONS ADVERSE TO QUALITY WERE ADEQUATELY IDENTIFIED, DOCUMENTED, EVALUATED & CORRECTED. THE FOLLOWING ARE EXAMPLES: THE CRACKS IN CONCRETE OF THE DRYWELL WALL IN THE VICINITY OF PENETRATION X-10A WERE NOT PROPERLY & ADEQUATELY EVALUATED; &, THE REPAIRS PERFORMED ON THE LOOSENED ANCHOR BOLTS IN PIPE SUPPORTS OF THE ISOLATION CONDENSER SYSTEM WERE NOT PROPERLY DOCUMENTED.
(8002 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS:

The plant is operating at 84% power and 515 MW(e) on the advice of the turbine manufacturer, due to a failed expansion joint on a turbine extraction steam line. A one week outage, for repairs, is planned for 5/30. Stack and offgas release rates are 330 microcuries per second and 140,000 microcuries per second, respectively.

LAST IE SITE INSPECTION DATE: 5/31/80

INSPECTION REPORT NO: 50-245/80-07

SUMMARY

INSPECTION SUMMARY

50-245/80-03 - Feb 1-29: Routine, onsite regular and backshift inspection by two resident inspectors (122 hours). Areas inspected included the control rooms and the accessible portions of the reactor, turbine, radioactive waste, gas turbine generator, and intake buildings; the condensate polishing facility; radiation protection; physical security; fire protection; plant operating records; surveillance testing; calibration; maintenance; core power distribution limits; and reporting to the NRC. No items of noncompliance were identified.

50-245/80-05 - Mar 13: A meeting was convened to discuss the findings of an investigation conducted by Region I of several allegations pertaining to the water-hammer event of December 19, 1979, and subsequent followup activities by the licensee and NRC. Licensee actions involved in system modifications and repair were also discussed.

INSPECTION STATUS

OTHER ITEMS OF INTEREST

MANAGERIAL ITEMS

Current plant manager is being promoted to a position in the corporate office effective April 1, 1980, but will stay at the plant until a new plant manager is selected and on board. (80-04)

PLANT STATUS

The plant is currently operating at 100%.

LAST IE SITE INSPECTION DATE: March 3, 1980

INSPECTION REPORT NO: 80-08

SUMMARY

INSPECTION SUMMARY

Inspection on February 21-22 and March 27-28, (80-04): Routine, announced inspection of operational radiation protection program during refueling and maintenance, including: organization and staffing; training, radiation protection procedures; planning, preparation, and ALARA; exposure control; posting and control; material control; surveys; spent resin disposal; and pipe fitters respiratory problem. The inspection involved 22.5 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

Inspection on March 19-21 and April 7-11, (80-07): Special, announced inspection of small break LOCA procedures and routine unannounced inspection of relief valve position indication, LER followup, IEB and IEC followup, plant operations, onsite review committee, fire protection and prevention, and calibration. The inspection involved 118 inspector hours onsite by 4 NRC inspectors. No items of noncompliance or deviations were identified.

Inspection on March 3, (80-08): During the inspection of radioactive waste shipments conducted at Richland, Washington from March 3-14, 1980, Trailer 03 (Freight Bill 80521) was inspected. A representative of the State of Washington also inspected the shipment. One apparent item of noncompliance with DOT regulations was identified (failure to mark a cask used to transport radioactive waste).

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 50 APPENDIX B CRITERIA XI AS IMPLEMENTED BY THE TOPICAL QUALITY ASSURANCE REPORT VEP-3-A SECTION 17.2.11 WRITTEN TEST PROCEDURES SHALL INCORPORATE THE REQUIREMENTS CONTAINED IN APPLICABLE SECTION 11, PARAGRAPH 2.1 FURTHER REQUIRES THAT TESTS DURING THE PREOPERATIONAL PERIOD SHALL DEMONSTRATE PERFORMANCE IN ACCORDANCE WITH DESIGN INTENT AS DESCRIBED IN THE FSAR. FSAR SECTION 7.3.1.3.5(I) AND FSAR COMMENT 7.4 BOTH IDENTIFY THE DESIGN FEATURE WHICH REQUIRES TWO SEPARATE OPERATOR ACTIONS TO RESET ANY ENGINEERED SAFEGUARDS FEATURE (ESF) ACTUATION CAUSING EQUIPMENT TO REVERT TO ITS NORMAL MODE OF OPERATION. CONTRARY TO THE ABOVE, THE NORTH ANNA UNIT 1 PREOPERATIONAL TEST PROGRAM HAD NO PROVISION TO TEST THE ESF RESET DESIGN TO ASSURE ITS OPERATION AS DESCRIBED IN FSAR SECTION 7.3.1.3.5(I) AND FSAR COMMENT 7.4.

INSPECTION REPORT NO: 50-338/80-26

SUMMARY

INSPECTION SUMMARY

INSPECTION APRIL 9-10 (80-17): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 14 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSPECTION ACTIVITIES RELATIVE TO IE BULLETIN 79-17, "PIPE CRACKS IN STAGNANT BORATED WATER SYSTEMS AT PWR PLANTS"; AND IE BULLETIN 80-08, "EXAMINATION OF CONTAINMENT LINER PENETRATION WELDS." NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 13-16 (80-18): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 43 INSPECTOR-HOURS ON SITE. THE INSPECTION FOCUSED ON THE INITIAL FUEL LOADING OF UNIT 2. LICENSEE ACTIONS ON AN EARLIER INSPECTION FINDING ON UNIT 1 AND INSPECTOR-IDENTIFIED ISSUES WERE ALSO ADDRESSED. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 21-25 (80-20): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 11 HOURS ON SITE IN THE AREAS OF PLANT OPERATION, LICENSEE EVENT REPORTS, AND PREVIOUS INSPECTION CONCERNS. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS. ONE ITEM OF NONCOMPLIANCE WAS IDENTIFIED IN ONE AREA (INFRACTION - FAILURE TO CONDUCT PREOPERATIONAL TESTING ON DESIGN FEATURE SPECIFIED IN THE FSAR).

SUMMARY

INSPECTION SUMMARY

INSPECTION APRIL 28 - MAY 1 (80-14): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 11 INSPECTOR-HOURS ON SITE IN THE AREAS OF FIRE PROTECTION/PREVENTION. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 15-17 AND 21-23 (80-15): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 30.5 INSPECTOR-HOURS ON SITE IN THE AREAS OF IE BULLETINS 79-13 AND 79-17 (UNIT 2); LOW PRESSURE TURBINE ROTOR UT EXAMINATION (UNIT 2); INSERVICE INSPECTION, (UNIT 2); SAFE SHUTDOWN FACILITY PIPE WELDING. OF THE FIVE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FOUR AREAS; ONE ITEM OF NONCOMPLIANCE WAS IDENTIFIED IN ONE AREA (INFRACTION - IMPROPERLY DESIGNED ISI CALIBRATION BLOCKS).

INSPECTION APRIL 22-25 (80-16): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 8 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONTAINMENT INTEGRATED LEAKAGE RATE TESTING WHICH INCLUDED INSPECTION OF TEST PROCEDURES AND POTENTIAL PROBLEM AREAS DURING THE UNIT 2 LEAKAGE RATE TEST, AND INSPECTION OF THE PLANT SURVEILLANCE PROGRAM OF PIPE SUPPORT AND RESTRAINT SYSTEMS FOR UNITS 1, 2 AND 3. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 1-30 (80-17): THIS ROUTINE INSPECTION INVOLVED 46 RESIDENT INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, OUTAGE ACTIVITIES, TEST WITNESSING, MAINTENANCE WITNESSING, FOLLOWUP ON PREVIOUS INSPECTION FINDINGS, COMPLIANCE WITH FEBRUARY 7 AND APRIL 17, 1980 SHOW CAUSE ORDERS AND REVIEW OF THE STATION SURVEILLANCE TESTING PROGRAM. OF THE SEVEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SIX AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO SUBMIT THIRTY DAY REPORTS WHEN A SURVEILLANCE TEST FREQUENCY WAS MISSED).

INSPECTION MAY 13-15 (80-18): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 7 INSPECTOR-HOURS ON SITE IN THE AREAS OF STRUCTURAL CONCRETE FOR THE STANDBY SHUTDOWN FACILITY. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 22-25 (80-11): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 9 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONTAINMENT INTEGRATED LEAKAGE RATE TESTING WHICH INCLUDED INSPECTION OF TEST PROCEDURES AND POTENTIAL PROBLEM AREAS DURING THE UNIT 2 LEAKAGE RATE TEST, AND INSPECTION OF THE PLANT SURVEILLANCE PROGRAM OF PIPE SUPPORT AND RESTRAINT SYSTEMS FOR UNITS 1, 2 AND 3. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 1-30 (80-12): THIS ROUTINE INSPECTION INVOLVED 46 RESIDENT INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, OUTAGE ACTIVITIES, TEST WITNESSING, MAINTENANCE WITNESSING, FOLLOWUP ON PREVIOUS INSPECTION FINDINGS, COMPLIANCE WITH FEBRUARY 7 AND APRIL 17, 1980 SHOW CAUSE ORDERS AND REVIEW OF THE STATION SURVEILLANCE TESTING PROGRAM. OF THE SEVEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SIX AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO SUBMIT THIRTY DAY REPORTS WHEN A SURVEILLANCE TEST FREQUENCY WAS MISSED).

INSPECTION MAY 13-15 (80-13): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 7 INSPECTOR-HOURS ON SITE IN THE AREAS OF STRUCTURAL CONCRETE FOR THE STANDBY SHUTDOWN FACILITY. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 6.6.2.1.B(3) A WRITTEN REPORT IS REQUIRED TO BE SUBMITTED WITHIN 30 DAYS OF DISCOVERY OF AN INADEQUACY IN THE IMPLEMENTATION OF PROCEDURAL CONTROLS WHICH ARE INTENDED TO ENSURE SURVEILLANCE ACTIVITIES ARE PERFORMED WITHIN SPECIFIED TIME INTERVALS TO MEET OPERABILITY REQUIREMENTS OF LIMITING CONDITIONS FOR OPERATIONS. CONTRARY TO THE ABOVE, ON FEBRUARY 1, 1979 AND ON FEBRUARY 28, 1979, THE LICENSEE DISCOVERED THAT SURVEILLANCE TESTING ON SAFETY RELATED BATTERIES AND REACTOR BUILDING PRESSURE ANALOG CHANNELS HAD NOT BEEN PERFORMED WITHIN THE TIME INTERVAL SPECIFIED BY TECHNICAL SPECIFICATIONS 4.6 AND 4.1 RESPECTIVELY. BOTH EVENTS WERE INVESTIGATED BY THE LICENSEE BUT WERE NOT REPORTED TO THE NRC. (8011 DEFICIENCY)

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS:

The plant is shutdown for refueling with return to operation scheduled for about June 7, 1980.

LAST IE SITE INSPECTION DATE: 5/30/80

INSPECTION REPORT NO: 50-219/80-23

SUMMARY

INSPECTION SUMMARY

50-219/80-03 - Jan 21-25: Routine, unannounced inspection by two regionally-based inspectors (86 hrs) of the Radiation Protection Program during refueling including: training; advanced planning and preparation; qualification of personnel; exposure control; radiation protection procedures; radioactive and contaminated material control, plant tours and followup on previous enforcement action. Areas where work was being conducted were examined to review radiation safety control procedures and practices. Four items of noncompliance were identified (Failure to perform evaluation as required by 10 CFR 20.201b sufficient to ensure compliance with 10 CFR 20.202; Failure to use respiratory protection equipment; Failure to adhere to procedures; and Failure to label radioactive material).

50-219/80-10 - Mar 17-20: Routine, unannounced inspection by a regionally-based inspector (32 hrs) of the containment integrated leak rate test procedure; containment penetration leak rate test activities; inservice testing of safety related pumps and valves; and licensee action on previous inspection findings. Two items of noncompliance (Failure to implement an inservice testing program; and Failure to implement procedures).

50-219/80-13 - Apr 7-11: Routine, unannounced inspection by one regionally-based inspector, a resident inspector and an NRC headquarters based engineer, of the Quality Assurance Program (QAP) implementation including: QA Program Review; QA/QC Administration; Design Changes/Modifications; and followup on previously identified items. The inspection involved 76 inspector-hours onsite and 46 inspector-hours at the Corporate Offices by a region-based inspector, a resident inspector and and NRC headquarters based engineer (NRR-QAB). No items of noncompliance were identified.

50-219/80-14 - Apr 18: Special, announced inspection by one regionally-based inspector (8 hrs) of the status of licensee radiation protection commitments made to NRC Region I during the period October 1978 through April 18, 1980. No items of noncompliance were identified.

50-219/80-18 - Apri 29: Special, enforcement conference convened by Region I management to discuss NRC concerns and licensee corrective actions arising from the NRC's Performance Appraisal Branch (PAB) inspection findings, radiation protection concerns resulting from recent Region I inspections, and actions to improve overall management controls. A forthcoming inspection by the Health Physics Appraisal Team was also discussed. The meeting was attended nu senior licensee and Region I management and involved three hours in the Region I office by all attendees.

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENTS

Facility modifications pursuant to NUREG-0578 have been completed. Other significant modifications also completed include blank-flanging containment ventilation supply and exhaust 48 inch lines; closing main-feed regulating and bypass valves on low steam-generator pressure; and functionally separating HPSI injection to two independent trains. (80-06)

FACILITY ITEMS

Extensive reviews and modifications to facility procedures in nearly all categories; particulary administrative, operating, off-normal, emergency and surveillance testing procedures, have been completed pursuant to NRC Bulletins and Orders and to address system and modifications. (80-06)

MANAGERIAL ITEMS

Mr. William Skibitsky assumed duties as the plant Operations Superintendent effective March 31, 1980. (80-05)

PLANT STATUS

Reactor resumed operation at 0544 on May 24, 1980, concluding a refueling and maintenance outage which began on September 8, 1979.

LAST IE SITE INSPECTION DATE: April 23, 1980

INSPECTION REPORT NO: 80-07

SUMMARY

INSPECTION SUMMARY

Inspection on March 25-27, (80-04): Included a review of the licensee's Security Plan as it related to alleged security concerns expressed by members of the guard force. The inspection involved 42 inspector hours onsite by two NRC inspectors. The inspection was begun during a day shift period; 10 inspector hours were accomplished during offshift periods. The licensee was found to be in compliance with NRC requirements within the areas examined during this inspection, except for the following item: Physical Barriers - A secondary physical barrier did not provide adequate protection.

Inspection during March 1980, (80-05): Resident inspection program activities: operations, reportable events, IE Bulletins, NUREG-0578 requirements; and followup of previously identified open inspection items. Special inspection activities: review of licensee actions on small break loss of coolant (SBLOCA) accident requirements. The inspection involved 176 inspector hours onsite by two NRC inspectors. No items of noncompliance or deviations were identified in any of the areas inspected.

Inspection on April 1 through May 2, (80-06): Routine resident inspection program activities including activities during long-term shutdown; cleanliness; preparations for startup; and action on previously identified items. Special inspections of licensee activities relating to the NRC Order Modifying License DPR-20 dated November 9, 1979 and activities relating to coping with small-break loss of coolant accidents. The inspections involved 186 inspector hours onsite by four NRC inspectors. No items of noncompliance or deviations were identified in any of the areas inspected.

Investigation on April 23, (80-07): Allegations concerning poor weld quality of rod hangers on the containment spray ring and also of the support restraints No. H896 and No. H897. The investigation involved five investigation hours onsite by one NRC investigator. No items of noncompliance or deviations were identified

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-09/ 01T-0	04/24/[illegible]	05/07/80	During walkdowns of safety related systems conducted to verify P&ID accuracy, the ventilation supply damper (CV-1812) to the west safeguards equipment room could not be located.
80-10/ 01T-0	03/26/80	05/07/80	During review of TS Surveillance Procedures, it was determined that during calibration of the SIRW tank low level switches in 3/76, the RAS setpoint exceeded the TS limit of 27 inches above the tank bottom.
80-11/ 03L-0	04/16/80	05/14/80	Following modifications to PORV supplies the valves were stroked per pre-op test procedure and declared operable.
80-12/ 03L-0	04/17/80	05/15/80	During inspection of fire barriers, it was discovered that the bottom half of the barrier for fire prevention HO-12 was missing.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TITLE 10, CHAPTER 1, CODE OF FEDERAL REGULATIONS, PART 50, APP B, CRITERION V, THE LICENSEE FAILED TO FOLLOW APPROVED PROCEDURES & DID NOT PROPERLY RESPOND TO A NONCONFORMANCE REPORT. THE RESPONSE WAS MADE AFTER 96 DAYS & WAS REQUIRED TO BE MADE IMMEDIATELY WHEN THE NONCONFORMANCE WAS 30 DAYS OVERDUE.
(7909 DEFICIENCY)

CONTRARY TO TS 6.4.1, THE RETRAINING PROGRAM FOR NON-LICENSED PERSONNEL HAD NOT BEEN ESTABLISHED. IM
(7909 INFRACTION)

CONTRARY TO TS 6.5.2.8.D, NO AUDITS OF THE QA SECTION, ENGINEERING & RESEARCH DEPARTMENT OR ITS ACTIVITIES HAD BEEN PERFORMED.
(7909 INFRACTION)

CONTRARY TO THE QA PROGRAM, FSAR 17.2, APP A, THE QA INSPECTIONS WERE NOT QUALIFIED IN ACCORDANCE WITH ANSI N45.2.6-1973.
(7909 DEVIATION)

CONTRARY TO TS 6.8.1, STATION PROCEDURES A43 & A47, & TS 4.9.A.2.C, DISCHARGE TEST OF UNIT 2 125 V STATION BATTERIES WAS APPARENTLY ACCOMPLISHED IN 1978 W/O USING SURVEILLANCE TEST (ST) 8.4. DATA REQUIRED TO BE RECORDED BY TS 4.9.A.2.C & ST 8.4 WAS APPARENTLY NOT RECORDED. SATISFACTORY PERFORMANCE OF ST 8.4 WAS NOT DOCUMENTED. FOR UNITS 2 & 3, RETEST OF PREVIOUSLY UNSATISFACTORY CABLE SPREADING ROOM VENT DAMPERS WAS NOT ACCOMPLISHED PER ST 16.4 & MAINTENANCE REQUEST FORM WAS NOT USED TO DOCUMENT & CONTROL REPAIR OF VENT DAMPERS.
(8006 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

MANAGERIAL ITEMS:

The Licensee Radiation Protection Manager, W. Barler, left the Licensee Organization on May 2, 1980. A management meeting to discuss the licensee's plans for a permanent replacement is scheduled for June 3, 1980 at the NRC Region I office.

PLANT STATUS:

Shutdown for refueling and torus modification. Startup is scheduled for early July.

LAST IE SITE INSPECTION DATE: 5/31/80

INSPECTION REPORT NO: 50-277/80-15

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

Experienced HPCI/RCIC control problems during startup testing.

PLANT STATUS:

Following refueling, the reactor was taken critical on May 14, 1980 for physics testing. The plant is presently at 80% power with plans to increase to normal full power operation. Representative stack and offgas release rates are 250 and 10,000 microcuries per second, respectively.

LAST IE SITE INSPECTION DATE: 5/31/80

INSPECTION REPORT NO: 50-293/80-23

SUMMARY

INSPECTION SUMMARY

50-293/80-11 - Mar 10-14: Routine, unannounced inspection by a regionally-based inspector and an NRR engineer of the Quality Assurance Program implementation including: QAP annual review; QA/QC administration program; design changes/modification program; plant modifications; previously identified items; and, a plant tour. The inspection involved 74 inspector-hours onsite by a regionally based inspector, an NRR engineer (NRR-QAB) and a resident inspector and 52 inspector-hours at the corporate offices by a regionally based inspector, an NRR engineer, two resident inspectors and one supervisor. No items of noncompliance were identified.

50-293/80-14 - Apr 8-11: Routine, unannounced inspection by four regionally-based inspectors (78 hrs) of general employee training, licensed operator requalification training and on-the-job training for plant staff. Plant tours were made on day and evening shifts. An OSHA exit meeting was attended. One item of noncompliance was identified: (Failure to keep records as required by licensee's training manual).

50-293/80-18 - Apr 22-30: Routine, unannounced inspection by one regionally-based and resident inspector (58 hrs) of Refueling Maintenance, Licensee plans for coping with strikes, and High Energy pipe break analysis (HPCI). One item of noncompliance was identified: (Failure to control foreign material in accordance with maintenance procedure requirements).

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS

The unit operated routinely during the month at reduced power.

LAST IE SITE INSPECTION DATE: March 10-14 and April 8, 1980

INSPECTION REPORT NO: 80-09

SUMMARY

INSPECTION SUMMARY

Inspection on March 31 through April 4, (80-06): Included a review of the Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys and Combinations; Records and Reports; Licensee Action of Previous Inspection Findings; Independent Inspection Effort. The inspection involved 72 inspector hours onsite by two NRC inspectors. The inspection began during the day shift; 19 inspection hours were accomplished during offshift periods. The licensee was found to be in compliance with NRC requirements within the 23 areas examined during the inspection except for the following 3 items: Vital Area Physical Barriers - Some vital area physical barriers were not properly maintained; Alarm Stations - A change in alarm status was not properly monitored; and Testing and Maintenance - Some alarm tests were not done at the required frequency.

Inspection on April 8-10, (80-07): Routine, unannounced inspection of radiation protection program associated with a refueling outage, including: radiation protection procedures; advanced planning and preparation; training; exposure control; instruments and equipment; posting and control; IE Information Notice No. 79-08; IE Circular No. 79-15; contract radiation protection technician qualifications; and specific matters concerning radioactive materials transport. The inspection involved 36 inspector hours onsite by two NRC inspectors. No items of noncompliance or deviations were identified.

Inspection on March 10-14 and April 8, (80-09): Routine, announced inspection on March 10-14, 1980 to review plant procedures, operator training, and systems utilized for Small Break Loss of Coolant event and other events affecting primary coolant inventory. On April 8, 1980 a special announced management meeting between NRC staff members, corporation management representatives of Wisconsin Electric Power, and Point Beach plant management to review plant performance was held. The inspection involved 55 inspector hours onsite by two NRC inspectors. The meeting involved 15 manhours by five NRC representatives. No items of noncompliance or deviations were identified.

NRC POWER RESTRICTIONS: NONE

The unit was put online May 14, 1980 following outage for refueling and maintenance.

LAST IE SITE INSPECTION DATE: March 10-14 and April 8, 1980

INSPECTION REPORT NO: 80-08

SUMMARY

INSPECTION SUMMARY

Inspection on March 31 through April 4, (80-05): Included a review of the Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys and Combinations; Records and Reports; Licensee Action of Previous Inspection Findings; Independent Inspection Effort. The inspection involved 72 inspector hours onsite by two NRC inspectors. The inspection began during the day shift; 19 inspection hours were accomplished during offshift periods. The licensee was found to be in compliance with NRC requirements within the 23 areas examined during the inspection except for the following 3 items: Vital Area Physical Barriers - Some vital area physical barriers were not properly maintained; Alarm Stations - A change in alarm status was not properly monitored; and Testing and Maintenance - Some alarm tests were not done at the required frequency.

Inspection on April 8-10, (80-06): Routine, unannounced inspection of radiation protection program associated with a refueling outage, including: radiation protection procedures; advanced planning and preparation; training; exposure control; instruments and equipment; posting and control; IE Information Notice No. 79-08; IE Circular No. 79-15; contract radiation protection technician qualifications; and specific matters concerning radioactive materials transport. The inspection involved 36 inspector hours onsite by two NRC inspectors. No items of noncompliance or deviations were identified.

Inspection on March 10-14 and April 8, (80-08): Routine, announced inspection on March 10-14, 1980 to review plant procedures, operator training, and systems utilized for Small Break Loss of Coolant event and other events affecting primary coolant inventory. On April 8, 1980 a special announced management meeting between NRC staff members, corporation management representatives of Wisconsin Electric Power, and Point Beach plant management to review plant performance was held. The inspection involved 55 inspector hours onsite by two NRC inspectors. The meeting involved 15 manhours by five NRC representatives. No items of noncompliance or deviations were identified.

SUMMARY

INSPECTION SUMMARY

Inspection on April 1-30, (80-06): Routine resident inspection of plant operation, maintenance, surveillance, security, radiation protection, followup of licensee reported events, followup of IE Bulletin and independent verifications of operability of safety-related systems. The inspection involved 105 inspector hours onsite by one NRC inspector. No items of noncompliance were identified. Of the eight areas inspected, no deviations were identified in seven areas. One deviation from a commitment was identified in one area (failure to complete inspections required by IE Bulletin 78-05).

Inspection on April 28 through May 2, (80-07): Included a review of the Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys and Combinations; Records and Reports; Licensee Action on Previous Inspection Findings; Independent Inspection Effort. The inspection involved 75 inspector hours onsite by two NRC inspectors including 14 inspection hours accomplished during offshift periods. The inspection began during the dayshift. The licensee was found to be in compliance with NRC requirements within the 20 areas examined during the inspection except for the following 5 items: Security Organization - The corrected vision of some security force personnel did not meet minimum requirements identified in the approved security plan; Vital Area Physical Barriers - Some vital area physical barriers were not properly maintained; Access Control (Escorting) - An unattended designated vehicle located within the protected area was not disabled as required by the approved security plan; Detection Aids - The instrusion detection system (E-Field) was not adequately employed to detect penetration at some location of the protected area boundary; and Detection Aids - Some vital area alarm devices and monitoring systems were not tamper-indicating.

PLANT STATUS

Unit in coastdown mode at end of operating cycle. Refueling outage scheduled for September 1, 1980.

LAST IE SITE INSPECTION DATE: March 27 through May 7, 1980

INSPECTION REPORT NO: 80-10

SUMMARY

INSPECTION SUMMARY

Inspection on April 1-2, (80-09): Routine, unannounced inspection of initial training and retraining of licensed and non-licensed personnel, and licensed operator requalification training. The inspection involved 13 inspector hours onsite by one NRC inspector. Of the areas inspected, no items of noncompliance were identified.

Inspection on March 27 through May 7, (80-10): Routine, unannounced inspection consisting of operational safety verification, long-term shut-down activities, maintenance observation (annual and refuel), surveillance observation, licensee event report followup, IE Bulletin followup, IE Circular followup, startup testing-refueling, plant trips, and independent inspection. The inspection involved 195 inspector hours onsite by one NRC inspector. No items of noncompliance were identified.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-09/ 03L-0	04/10/80	04/30/80	During test procedure QOS 1000-3, the thermal overload relay for the B-loop suppression chamber cooling valve tripped while attempting to open.
80-10/ 03L-0	04/23/80	05/16/80	During Electrohydraulic Control Fluid Pressure Scram surveillance, prs. switch 1-5600-PS-3 tripped at 896 psig.
80-13/ 03L-0	04/15/80	05/14/80	During procedure QIS 10-1, swithc LIS-1-263-57A tripped at a level of 3.85 below TS 3.1.A LCO.
80-14/ 03L-0	04/15/80	05/14/80	During procedure QIS-6, pressure switch PS-1-1001-88A was found to trip at 2.05 psig.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 6.2.A REQUIRES THAT "DETAILED WRITTEN PROCEDURES INCLUDING APPLICABLE CHECKOFF LISTS...SHALL BE PREPARED, APPROVED, AND ADHERED TO." CONTRARY TO THE ABOVE, PROCEDURE QTS 150-57, REVISION 6, "UNIT 2 IPCLRT VALVE LINEUP," WAS NOT ADHERED TO IN THAT VALVE POSITION VERIFICATION WAS NOT CARRIED OUT ON MARCH 8, 1980, TO VERIFY THAT VALVES 2-1402-33A AND 2-1402-33B (LOCAL LEAK TEST VALVES FOR CORE SPRAY ISOLATION VALVES) WERE LOCKED CLOSED AS REQUIRED. (8001 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS

Unit 2 was returned to operation on April 23, 1980 following a 21 week refuel/maintenance outage. Major work included feedwater nozzle clad removal, Mark I containment modifications, repair of core spray piping and replacement of a jet pump holddown beam assembly (80-13). Routine operations in the month of May.

PLANT STATUS

Plant operating routinely.

LAST IE SITE INSPECTION DATE: March 27 through May 7, 1980

INSPECTION REPORT NO: 80-13

SUMMARY

INSPECTION SUMMARY

Inspection on March 12-13, 26-28; April 3-4 and 11, (80-11): Review of Core Spray System repair program and repair procedures, observation of repair welding activities and NDE examinations, review of personnel and material certifications, and review of repair documentation and radiographs. The inspection involved 47 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

Inspection on April 1-2, (80-12): Routine, unannounced inspection of initial training and retraining of licensed and non-licensed personnel, and licensed operator requalification training. The inspection involved 13 inspector hours onsite by one NRC inspector. Of the areas inspected, no items of noncompliance were identified.

Inspection on March 27 through May 7, (80-13): Routine, unannounced inspection consisting of operational safety verification, long-term shutdown activities, maintenance observation (annual and refuel), surveillance observation, licensee event report followup, IE Bulletin followup, IE Circular followup, startup testing-refueling, plant trips, and independent inspection. The inspection involved 195 inspector hours onsite by one NRC inspector. No items of noncompliance were identified.

SUMMARY

INSPECTION SUMMARY

Inspection on May 5-9, 1980 (Report No. 50-312/80-13)
Report being prepared; to be reported next month.

Inspection on April 14-26, 1980 (Report No. 50-312/80-15)
Report being prepared; to be reported next month.

Inspection on April 1-30, 1980 (Report No. 50-312/80-16)
Areas Inspected: Routine inspections of long term shutdown activities; followup on a Regional request item; and independent inspection effort. The inspection involved 106 inspector hours by the Senior Resident inspector and 54 inspector hours by other NRC inspectors.

Results: No items of noncompliance or deviations were identified.

Inspection on May 1-30, 1980 (Report No. 50-312/80-17)
Report being prepared; to be reported next month.

INSPECTION REPORT NO: 50-261/80-07

SUMMARY

INSPECTION SUMMARY

INSPECTION APRIL 21-25 (80-09): INCLUDED REVIEW OF THE LICENSEE'S SECURITY PROGRAM AUDIT, VITAL AND PROTECTED AREA BARRIERS, SECURITY LIGHTING, COMMUNICATIONS, DETECTION AIDS, ASSESSMENT AIDS, POWER SUPPLY, AND LOCKS, KEYS, AND COMBINATIONS. THE INSPECTION INVOLVED 60 INSPECTOR-HOURS ON SITE BY TWO NRC INSPECTORS. TEN INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE NINE AREAS EXAMINED DURING THE INSPECTION EXCEPT FOR THE FOLLOWING FOUR ITEMS: (1) PHYSICAL BARRIER - INSECURE GRATES AND HATCHES PROVIDED UNAUTHORIZED ACCESS INTO A VITAL AREA; (2) DETECTION AIDS - AN EXIT DOOR IN A VITAL AREA WAS NOT EQUIPPED WITH AN INTRUSION DETECTION ALARM; (3) DETECTION AIDS - TAMPER INDICATING CAPABILITY COULD NOT BE DEMONSTRATED IN A PROTECTED AREA ALARM SYSTEM; AND (4) ASSESSMENT AIDS - OPERABLE CCTV EQUIPMENT DEDICATED TO SURVEILLANCE OF A VITAL AREA DID NOT PROVIDE AN ACCEPTABLE LEVEL OF OBSERVATION.

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

Spent fuel pool weld channel leakage of 200-300 ml/hr is being observed. Permanent repairs will be completed in June.

FACILITY ITEMS (PLANS AND PROCEDURES):

The next refueling outage is scheduled for September 20, 1980.

PLANT STATUS:

The unit is operating at full power.

LAST IE SITE INSPECTION DATE: 5/31/80

INSPECTION REPORT NO: 50-272/80-12

SUMMARY

INSPECTION SUMMARY

50-272/80-04 - Jan 28-31, Feb 1, 4-7 and 11-13: Routine, unannounced inspection by regionally-based inspectors and an NRR engineer of the Quality Assurance Program (QAP) implementation in the areas of QA/QC administration; design changes and modifications; document/drawing control; audits; QAP changes; and, followup on previously identified items. The inspection involved 124 inspector-hours onsite and 48 inspector-hours at the corporate offices by two NRC regional-based inspectors and one NRC headquarters (NRR-QAB) based engineer. Three items of noncompliance were identified: (Failure to develop/establish appropriate instructions/procedures; Failure to implement/follow established procedures; and Failure to store records in accordance with established requirements).

50-272/80-10 - Apr 22-25: Routine, unannounced inspection by one regionally-based inspector (32 hrs) of Containment Leak Rate Testing; inservice testing of pumps; surveillance of pipe supports and restraints; and licensee action on previous inspection findings. One item of noncompliance was identified: (Failure to meet CLRT reporting requirements).

NRC POWER RESTRICTIONS: NONE

(7712 INFRACTION)

CERTAIN VEHICLES IMPROPERLY SEARCHED.
(7712 INFRACTION)

CERTAIN PERSONS IMPROPERLY BADGED.
(7712 INFRACTION)

10 CFR 50.55A, PARAGRAPH (G)(5), STATES, IN PART THAT "...COMPONENTS WHICH ARE CLASSIFIED AS ASME CODE CLASS 1, CLASS 2 AND CLASS 3 SHALL MEET THE REQUIREMENTS...SET FORTH IN SECTION XI...." THE APPLICABLE ADDENDA OF SECTION XI (SUMMER 1978) STATES THAT A REPAIR MAY BE MADE TO THE REQUIREMENTS OF SECTION XI OR TO THE REQUIREMENTS OF THE CODE OF CONSTRUCTION. THE CODE OF CONSTRUCTION FOR SAN ONOFRE UNIT 1 IS ANSI B31.1. SCE ELECTED TO USE ANSI B31.1-1977. CONTRARY TO THE REQUIREMENTS OF ANSI B31.1-1977, ON FEBRUARY 26, 1980 A MODIFIED SOCKET WELD FITTING WAS USED IN AN ASME CLASS 2 SYSTEM, THE CHARGING PUMP PIPING, LINE 2019-2-2502R, WITHOUT AN ANALYSIS OR THE SUBSTANTIATION AS REQUIRED BY PARAGRAPHS 106.1B AND 104.7.
(8004 INFRACTION)

APPENDIX B OF 10 CFR 50, CRITERION V, STATES, IN PART THAT "ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS, PROCEDURES AND SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THESE INSTRUCTIONS, PROCEDURES...." BECHTEL WORK PLAN PROCEDURE NO. 19.20, "CONTROL OF WELDING FILLER MATERIAL," STATES, IN PART THAT IN CONTROLLED RADIATION AREAS, PARAGRAPH 6.1.12.1, "UNUSED MATERIAL SHALL BE DISPOSED OF BY BENDING...." CONTRARY TO THESE REQUIREMENTS, THE RESIDENT INSPECTOR FOUND SIX RODS OF E308L WELD FILLER MATERIAL ON THE FLOOR OF THE CHARGING ROOM ON FEBRUARY 27, 1980. NO WORK WAS IN PROGRESS IN THE CHARGING ROOM AT THE TIME. APPARENTLY, THE FILLER MATERIAL WAS LEFT FROM PRIOR WELDING ACTIVITIES AND HAD NOT BEEN DISPOSED OF IN ACCORDANCE WITH THE PROCEDURE.
(8004 INFRACTION)

TECHNICAL SPECIFICATION 6.9.2.B(1) REQUIRES THAT REACTOR PROTECTION SYSTEM INSTRUMENT SETTINGS WHICH ARE FOUND TO BE LESS CONSERVATIVE THAN THOSE ESTABLISHED BY THE TECHNICAL SPECIFICATIONS, BUT WHICH DO NOT PREVENT THE FULFILLMENT OF THE FUNCTIONAL REQUIREMENTS OF AFFECTED SYSTEMS, SHALL BE THE SUBJECT OF WRITTEN REPORTS TO THE DIRECTOR OF THE APPROPRIATE REGIONAL OFFICE WITHIN 30 DAYS OF OCCURRENCE OF THE EVENT. CONTRARY TO THESE REQUIREMENTS, A DIGITAL FEEDWATER FLOWMETER WAS INSTALLED AT THE FACILITY AND APPARENTLY USED BY SOME OPERATORS IN THE CALCULATION OF NUCLEAR POWER AT INTERVALS FROM OCTOBER 24, 1979 UNTIL DECEMBER 3, 1979. WHEN THIS USE WAS DISCOVERED, THE DIGITAL METER WAS INDICATING A VALUE OF FEEDWATER FLOW ONE TO TWO PERCENT LESS CONSERVATIVE THAN THE VALUES INDICATED BY THE PRECISION BARTON DP METERS WHICH OPERATING INSTRUCTION S-3-3.13, "REACTOR POWER CALCULATION," STATES "SHOULD BE USED." THIS DISCOVERY WAS NOT REPORTED IN ACCORDANCE WITH TECHNICAL SPECIFICATION 6.9.2.B(1).
(8004 DEFICIENCY)

SEE CONTINUATION PAGE S-5A

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT

NONE

TECHNICAL SPECIFICATION 3.3.1A.(1)H STATES THAT THE REACTOR SHALL NOT BE MAINTAINED CRITICAL UNLESS TWO SALT WATER COOLING PUMPS ARE OPERABLE OR ONE SALT WATER COOLING PUMP AND THE AUXILIARY SALT WATER COOLING PUMP ARE OPERABLE. TECHNICAL SPECIFICATION 3.3.1B(6) STATES THAT DURING CRITICAL OPERATION MAINTENANCE SHALL BE ALLOWED ON ONE OF THE TWO REQUIRED SALT WATER COOLING PUMPS OR AUXILIARY SALT WATER COOLING PUMP FOR A PERIOD OF TIME NOT LONGER THAN 72 CONSECUTIVE HOURS. CONTRARY TO THESE REQUIREMENTS, ON MARCH 10, 1980 FROM 9:25 P.M. TO 9:56 P.M. THE REACTOR WAS OPERATED AT OR NEAR 100 PERCENT OF RATED POWER WITH THE TWO SALT WATER COOLING PUMPS AND THE AUXILIARY SALT WATER COOLING PUMP INOPERABLE. ALSO, FROM 9:56 P.M. ON MARCH 10, 1980 TO 12:05 A.M. ON MARCH 11, 1980, THE REACTOR WAS OPERATED AT OR NEAR 100 PERCENT OF RATED POWER WITH BOTH SALT WATER COOLING PUMPS INOPERABLE.
(8009 INFRACTION)

TECHNICAL SPECIFICATION 6.8.1 STATES, IN PART THAT "WRITTEN PROCEDURES SHALL BE ESTABLISHED, IMPLEMENTED, AND MAINTAINED THAT MEET OR EXCEED THE REQUIREMENTS AND RECOMMENDATIONS OF SECTIONS 5.1 AND 5.3 OF ANSI N18.7-1976, 'ADMINISTRATIVE CONTROLS FOR NUCLEAR POWER PLANTS;' APPENDIX A OF USNRC REGULATORY GUIDE 1.33, REVISION 1, 'QUALITY ASSURANCE PROGRAM REQUIREMENTS (OPERATION)'...." EMERGENCY OPERATING INSTRUCTION S-3-5.34, REVISION 0, FEBRUARY 1, 1980, SECTION 3, STATES THAT IF BOTH SALT WATER COOLING PUMPS BECOME INOPERABLE AND THE AUXILIARY SALT WATER COOLING PUMP COOLING IS INADEQUATE, TRIP THE UNIT. CONTRARY TO THE ABOVE REQUIREMENTS, WHILE OPERATING THE REACTOR AT OR NEAR 100 PERCENT OF RATED POWER ON MARCH 10, 1980, THE UNIT WAS NOT TRIPPED WHEN BOTH SALT WATER COOLING PUMPS WERE INOPERABLE AND WHEN THE AUXILIARY SALT WATER COOLING PUMP WAS NOT PROVIDING ANY COOLANT FLOW TO THE SYSTEM.
(8009 INFRACTION)

TITLE 10, CODE OF FEDERAL REGULATIONS, PART 20.203.B, REQUIRES THAT EACH RADIATION AREA (DEFINED IN 10 CFR 20.202) SHALL BE CONSPICUOUSLY POSTED WITH A SIGN OR SIGNS BEARING THE RADIATION CAUTION SYMBOL AND THE WORDS: "CAUTION: RADIATION AREA." CONTRARY TO THIS REQUIREMENT, ON APRIL 17, 1980, RADIATION DOSE READINGS OF 8 MILLIREM PER HOUR WERE MEASURED OUTSIDE A POSTED TEMPORARY ROPE BARRIER SURROUNDING A SPENT RESIN CASK LOCATED ON A TRUCK. THE 8 MILLIREM PER HOUR RADIATION AREA WAS NOT CONSPICUOUSLY POSTED AS REQUIRED BY 10 CFR PART 20.203.B.
(8012 INFRACTION)

TECHNICAL SPECIFICATION 6.8.1 REQUIRES THAT WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED THAT MEET OR EXCEED THE REQUIREMENTS AND RECOMMENDATIONS OF APPENDIX A OF USNRC REGULATORY GUIDE 1.33, REV. 1. PARAGRAPH 9.C.(7) OF REGULATORY GUIDE 1.33 RECOMMENDS WRITTEN PROCEDURES FOR THE REPLACEMENT OF NEUTRON DETECTORS. THE FACILITY TEST PROCEDURE NO. S-II.1.11, REF. 2, FOR REPLACING NEUTRON DETECTORS WAS WRITTEN PURSUANT TO THESE REQUIREMENTS. CONTRARY TO THE ABOVE REQUIREMENTS: (1) ON APRIL 16, 1980, FACILITY TEST PROCEDURE NO. S-II.1.11 WAS NOT IMPLEMENTED IN THE REPLACEMENT OF THE SOURCE RANGE INSTRUMENTATION DETECTORS AND (2) ON APRIL 24, 1980, THE DETECTORS FOR THE SOURCE RANGE INSTRUMENTATION BECAME ERRATIC AND WERE REPLACED PURSUANT TO THE REQUIRED PROCEDURE WITH THE EXCEPTION THAT HIGH VOLTAGE PLATEAU CURVES WERE NOT PREPARED AND USED AS REQUIRED BY STEP R OF THE PROCEDURE.
(8012 INFRACTION)

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 6.10.1.B REQUIRES THAT RECORDS AND LOGS OF PRINCIPAL MAINTENANCE ACTIVITIES, INSPECTIONS, REPAIR AND REPLACEMENT OF PRINCIPAL ITEMS OF EQUIPMENT RELATED TO NUCLEAR SAFETY BE RETAINED FOR A PERIOD OF AT LEAST FIVE YEARS. CONTRARY TO THIS REQUIREMENT, THE RECORDS REQUIRED BY TEST PROCEDURE S-II.1.11 RELATING TO REPLACEMENT OF DETECTORS FOR THE POWER RANGE INSTRUMENTATION, CHANNEL NO. 1205, ON FEBRUARY 4, 1980 WERE UNAVAILABLE ON APRIL 2 AND APPARENTLY NOT RETAINED AS REQUIRED.
(8012 DEFICIENCY)

TECHNICAL SPECIFICATION SECTION 6.8.1 REQUIRES THAT WRITTEN PROCEDURES "..BE ESTABLISHED, IMPLEMENTED AND MAINTAINED...." RADIATION PROTECTION PROCEDURE, S-VII-1.5, "ACCESS TO CONTROLLED AND EXCLUSION AREAS," STATES IN PART, "PLASTIC AND OTHER GLOVES MUST BE REMOVED AND HANDS MUST BE MONITORED BEFORE SMOKING OR DRINKING." CONTRARY TO THIS REQUIREMENT, ON APRIL 25 TWO INDIVIDUALS WERE OBSERVED TO BE SMOKING IN THE TURBINE DECK "DRINKING WATER-SMOKING AREA" WHILE WEARING GLOVES. ONE INDIVIDUAL WAS WEARING COTTON LINER GLOVES AND THE OTHER WAS WEARING BOTH COTTON LINER AND PLASTIC GLOVES.
(8013 INFRACTION)

INSPECTION STATUS

INSPECTION STATUS

SYSTEMS AND COMPONENT PROBLEMS:

Refueling outage commenced two days earlier than scheduled due to increase in primary to secondary (S/G tube) leakage (PNO-V-80-24).

FACILITY ITEMS (PLANS AND PROCEDURES):

Refueling.

MANAGERIAL ITEMS

None.

PLANT STATUS:

Plant shut down for refueling outage.

LAST IE SITE INSPECTION DATE: 05/01-30/80+

INSPECTION REPORT NO: 50-206/80-16+

SUMMARY

INSPECTION SUMMARY

Inspection on March 1-April 4, 1980 (Report No. 50-206/80-10)
Report being prepared; to be reported next month.

Inspection on April 21-25, 1980 (Report No. 50-206/80-11)
Areas Inspected: Routine, announced inspection of inservice inspection activities; maintenance and repair activities on pressurizer code safety valves; and licensee activities in response to IE Bulletin 79-02, "Pipe Support Base Plate Designs Using Concrete Expansion Anchor Bolts." The inspection included selective examinations of procedures and representative records; interviews with personnel; observation of work activities; and a review of licensee action on previous items of noncompliance. The inspection involved 64 inspector hours onsite by two NRC inspectors.

Results: No items of noncompliance or deviations were identified.

Inspection on April 5-May 2, 1980 (Report No. 50-206/80-12)
Areas Inspected: Routine resident inspection of plant operations as related to long term shutdown; monthly maintenance observations; long term shutdown activities; small break loss of coolant (SBLOCA) procedures; followup on licensee event reports; followup on licensee's response to IE Bulletin 79-15 and IE Circular 80-02. The inspection involved 67 inspector hours by one NRC inspector.

Results: In the monthly maintenance observation area, two items of noncompliance were identified concerning nuclear instrument detector replacements (Infraction - Failure to follow procedure; Deficiency - Failure to retain records). In the plant operations area, one item of noncompliance was identified (Infraction - Failure to implement fully the 10 CFR 20 posting requirements for a radiation area).

Inspection on April 23-25, 1980 (Report No. 50-206/80-13)
Areas Inspected: An alleger was interviewed at an offsite location, and nine specific allegations were examined at the licensee's facilities. The inspection involved 26 inspector hours onsite by two NRC inspectors.

Results: The inspector observed a failure to follow a radiation protection procedure which is required by Technical Specification 6.8.

Inspection on April 15-18, 1980 (Report No. 50-206/80-14)
Areas Inspected: A special inspection was conducted to determine the circumstances and events that occurred at the San Onofre Unit 1 nuclear facility when nine SCE employees were found to have radioactive contamination on their skin upon exiting the exclusion area and removing protective clothing. The inspection involved 44 hours onsite by two NRC Radiation Specialist inspectors.

Results: As a result of this inspection, one item of noncompliance with Technical Specification 6.11 requirements was identified.

Inspection on May 28-30, 1980 (Report No. 50-206/80-15)
Report being prepared; to be reported next month.

Inspection on May 1-30, 1980 (Report No. 50-206/80-16)
Report being prepared; to be reported next month.

Inspection on May 19-30, 1980 (Report No. 50-206/80-17)
Report being prepared; to be reported next month.

Inspection on May 19-22, 1980 (Report No. 50-206/80-18)
Report being prepared; to be reported next month.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION V, ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED PROCEDURES AND SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THESE PROCEDURES. THE LICENSEE'S ACCEPTED QA PROGRAM (FPLTQAR 1-76A), SECTION 5.1, REQUIRES THAT ACTIVITIES AFFECTING QUALITY SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THESE PROCEDURES. SECTION 18.2.5 OF FPLTQAR 1-76A REQUIRES THE AUDITED ORGANIZATION TO PROVIDE A WRITTEN RESPONSE WITHIN 30 CALENDAR DAYS AFTER RECEIPT OF AN AUDIT REPORT. QP-18.1, SECTION 5.5.1 STATES THAT RESPONSES TO AUDIT FINDINGS ARE DUE WITHIN 30 CALENDAR DAYS AFTER RECEIPT OF THE AUDIT REPORT. QP-16-1, SECTIONS 5.4.3 AND 5.4.4 STATE THE ACTIONS TO BE TAKEN WHEN NO RESPONSE IS RECEIVED. THE RESPONSETO AUDIT FINDING #3 OF QAE-QAD-80-1 THAT WAS ISSUED ON FEBRUARY 20, 1980 HAD NOT BEEN PREPARED AS OF APRIL 15, 1980, AND NONE OF THE FOLLOWUP ACTIONS SPECIFIED IN QP-16-1 HAD BEEN INITIATED.
(8007 DEFICIENCY)

THE TECHNICAL SPECIFICATIONS, SECTION 6.8.1, STATES IN PART THAT WRITTEN PRECEDURES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED. AP0010124, CONTROL AND USE OF JUMPERS AND DISCONNECTED LEADS IN SAFETY RELATED SYSTEMS, SECTION 5.4 REQUIRES IN PART THAT THE I&C SUPERVISOR AND THE ASSISTANT SUPERINTENDENT ELECTRICAL MAINTENANCE ARE RESPONSIBLE FOR REVIEWING, WITH THE OPERATIONS SUPERVISOR THE DISCONNECTED LEAD AND TEMPORARY JUMPER LOG...PRIOR T....EACH REFUELING. THE I&C SUPERVISOR AND THE ASSISTANT SUPERINTENDENT ELECTRICAL MAINTENANCE AND THE OPERATIONS SUPERINTENDENT DID NOT REVIEW THE DISCONNECTED LEAD AND TEMPORARY JUMPER LOG PRIOR TO THE REFUELING THAT COMMENCED MARCH 15, 1980.
(8007 INFRACTION)

AS REQUIRED BY CRITERION V OF APPENDIX B TO 10 CFR 50 AND AS IMPLEMENTED BY PARAGRAPH 17.2.5 OF THE FSAR, "ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS, PROCEDURES, DRAWINGS---AND SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THESE INSTRUCTIONS, PROCEDURES, AND DRAWINGS". PARAGRAPH 5.4.3.1 OF FP&L PROCEDURE QI 9 PR/PSL-2, THE APPLICABLE PROCEDURE FOR THE CONTROL OF NDE, AND PARAGRAPH 8 OF ASNT-SNT-TC-1A REQUIRE A YEARLY EYE EXAMINATION FOR NDE PERSONNEL. ON APRIL 11, 1980, NDE RECORDS REVEALED THAT FOR THE SITE LEVEL III EXAMINER, AN EYE EXAMINATION HAD NOT BEEN ADMINISTERED WITHIN THE REQUIRED YEARLY TIME FRAME.
(8010 DEFICIENCY)

LAST IE SITE INSPECTION DATE: JUNE 3-6, 1980

INSPECTION REPORT NO: 50-335/80-16

SUMMARY

INSPECTION SUMMARY

INSPECTION APRIL 15-18 (80-07): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 48 INSPECTOR-HOURS IN OFFICE AND 57 INSPECTOR-HOURS ON SITE IN THE AREAS OF QA/QC ADMINISTRATION; QA PROGRAM REVIEW; HOUSEKEEPING AND CLEANLINESS PROGRAM; ORGANIZATION AND ADMINISTRATION; QA AUDITS; RECEIPT STORAGE AND HANDLING OF EQUIPMENT AND MATERIAL; OFFSITE SUPPORT STAFF; DESIGN, DESIGN CHANGES AND MODIFICATIONS; DESIGN CHANGES AND MODIFICATIONS PROGRAM; TEST AND EXPERIMENTS PROGRAM; MAINTENANCE: AND PERSONNEL QUALIFICATION PROGRAM. OF THE TWELVE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TEN AREAS; TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (INFRACTION - FAILURE TO FOLLOW PROCEDURE; AND DEFICIENCY - FAILURE TO FOLLOW PROCEDURES).

INSPECTION APRIL 8-11 (80-10): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 25 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSERVICE INSPECTION (ISI); IE BULLETIN 79-13. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE OF NDE EXAMINER TO MEET EYE EXAMINATION REQUIREMENTS).

INSPECTION APRIL 29 - MAY 2 (80-12): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 21 INSPECTOR-HOURS ON SITE IN THE AREAS OF SURVEILLANCE ACTIVITY ON PIPE SUPPORT AND RESTRAINT SYSTEMS, INCLUDING EXAMINATION OF PROCEDURE TEST RESULTS AND INSTALLED RESTRAINTS, AND EXAMINATION OF RECORDS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 30 - MAY 2 (80-14): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 17 INSPECTOR-HOURS ON SITE IN THE AREAS OF CALIBRATION OF TECHNICAL SPECIFICATION REQUIRED PLANT INSTRUMENTS AND MEASURING AND TEST EQUIPMENT, AND FOLLOWUP OF RECENT LER'S. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO REPORT EMERGENCY DIESEL GENERATOR LOAD SEQUENCE TIMERS THAT DID NOT MEET TECHNICAL SPECIFICATION LIMITS DURING ROUTINE SURVEILLANCE TESTING).

INSPECTION STATUS

ENFORCEMENT STATUS

WELDING OPERATIONS WERE BEING CONDUCTED ON THE 2 FOOT ELEVATION OF THE AUXILIARY BUILDING WITHOUT A WELDING AND FLAME PERMIT AS REQUIRED BY TECHNICAL SPECIFICATION 6.4.J AND VEPCO PROCEDURE ADM-56 SPECIAL PROCESSES INVOLVING IGNITION SOURCES.
(8008 INFRACTION)

VEPCO LETTER SERIAL NUMBER 725 DATED SEPTEMBER 5, 1979 STATED THAT "ACCESSIBLE SUPPORTS WILL BE UPGRADED EXPEDITIOUSLY AS DEFICIENCIES ARE NOTED DURING PLANT OPERATION...AS REQUIRED BY IE BULLETIN 79-02". THIS LETTER FURTHER STATED TH'T, "WE PLAN TOFULLY COMPLY WITH THE INTENT AND SCHEDULE OF BULLETIN 79-02...". A LETTER FROM REGION II TO VEPCO DATED SEPTEMBER 7, 1979 CONFIRMING ACTIONS TO BE TAKEN BY VEPCO RELATED TO RETURNING UNIT 1 TO SERVICE STATED THAT, "IT IS OUR UNDERSTANDING THAT AFTER YOU COMMENCE OPERATION OF UNIT 1, YOU WILL CONTINUE THE INSPECTIONS REQUIRED BY IEB 79-02 FOR ACCESSIBLE SYSTEMS". NRC INSPECTION REPORT 50-280/79-5E3 DATED SEPTEMBER 28, 1979 REITERATED THAT THE EXP EDITIOUS "COMPLETION OF THE REMAINING INSPECTIONS, TESTS, ANALYSES AND REPAIRS AS SPECIFIED IN IEB 79-02" WAS EXPECTED. AS OF APRIL 18, 1980 NONE OF THE ADDITIONAL INSPECTIONS OR TESTING REQUIRED FOR IE BULLETIN 79-02 HAD BEEN INITIATED. NO PROCEDURE HAD BEEN PREPARED FOR PERFORMANCE OF THIS WORK.
(8012 DEVIATION)

AS REQUIRED BY 10 CFR 50.59, THE LICENSEE MAY MAKE CHANGES IN THE FACILITY AS DESCRIBED IN THE SAFETY ANALYSIS REPORT (SAR) WITHOUT NRC APPROVAL, PROVIDED RECORDS OF THE CHANGES ARE MAINTAINED, INCLUDING WRITTEN SAFETY EVALUATIONS WHICH DETERMINE THAT THE CHANGE DOES NOT PRESENT AN UNREVIEWED SAFETY QUESTION. SAFETY EVALUATIONS AND RECORDS OR CERTAIN CHANGES MADE TO COMPONENTS DESCRIBED IN SECTION 6.3.1.4 OF THE SAR TO DETECT OR CONTROL LEAKS IN THE LHSI AND OUTSIDE RECIRCULATION SPRAY SUCTION PIPING WERE NOT MAINTAINED OR AVAILABLE ON MARCH 28, 1980. THE CHANGES INCLUDED THE VALVE PIT BAFFLES, WHICH WERE NOT INSTALLED TO ISOLATE THE SPRAY SUBSYSTEM LEAKAGE, AND THE PIT LIQUID LEVEL DETECTORS; ONLY ONE OF THE TWO LEVEL DETECTORS (PER UNIT) WERE INSTALLED.
(8013 INFRACTION)

AS REQUIRED BY 10 CFR 73.55(D)(7), THE LICENSEE SHALL POSITIVELY CONTROL ALL POINTS OF PERSONNEL AND VEHICLE ACCESS INTO VITAL AREAS. SECTION 5.3.1.3 OF THE SURRY POWER STATION SECURITY PLAN, WHICH IMPLEMENTS THE ABOVE, STATES, IN PART, THAT ALL VITAL AREA PORTALS ARE CONTROLLED BY ELECTRONIC LOCKS OR KEY LOCKS, OR BY ADMINISTRATIVE CONTROL OF SECURITY OR AUTHORIZED STATION OPERATING PERSONNEL. UNDER "DEFINITIONS" OF THE SECURITY PLAN, ADMINISTRATIVE CONTROL IS DEFINED AS THE MEANS BY WHICH AN ENTRANCE, GATE,...ETC., IS EITHER LOCKED AND ALARMED OR UNDER THE DIRECT SUPERVISION AND CONTROL OF AN INDIVIDUAL AUTHORIZED UNESCORTED ACCESS TO THE AREA.... ON NOVEMBER 28, 1979, THE REACTOR CONTROL ROOM DOOR WAS FOUND STANDING OPEN, THE ALARM SYSTEM WAS IN "ACCESS" (OUT OF SERVICE), AND THE ENTRANCE ACCESS WAS NOT UNDER THE DIRECT SUPERVISION AND CONTROL OF AN INDIVIDUAL AUTHORIZED UNESCORTED ACCESS TO THE AREA; THUS, ACCESS INTO THIS VITAL AREA WAS NOT POSITIVELY CONTROLLED. AUTHORIZED PERSONNEL WERE CONTROLLING ACCESS FROM INSIDE THE CONTROL ROOM WHILE THE ALARM AND ACCESS SYSTEM WAS INOPERABLE.
(8013 DEFICIENCY)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4.A.4, DETAILED WRITTEN PROCEDURES WITH APPROPRIATE CHECK-OFF LISTS AND INSTRUCTIONS SHALL BE PROVIDED FOR ACTIONS TO BE TAKEN FOR SPECIFIC AND FORESEEN MALFUNCTIONS OF SYSTEMS OR COMPONENTS INCLUDING ALARMS, PRIMARY SYSTEM LEAKS AND ABNORMAL REACTIVITY CHANGES. CONTRARY TO THE ABOVE, DETAILED WRITTEN PROCEDURES WITH APPROPRIATE CHECK-OFF LISTS AND INSTRUCTIONS HAVE NOT BEEN PROVIDED AS OF APRIL 25, 1980, FOR ACTIONS TO BE TAKEN WHEN CERTAIN INSTALLED RADIATION MONITORING COMPONENTS MALFUNCTION. CONSEQUENTLY, WHEN THE UNIT 2 RADIATION MONITOR (RM-RMS-262) ON THE MANIPULATOR CRANE INTERMITTENTLY FAILED ON APRIL 21 AND 22, 1980, DURING UNIT 2 REFUELING, APPROPRIATE PROMPT CORRECTIVE ACTION WAS NOT TAKEN TO CORRECT THE MALFUNCTION WHICH WAS INDICATED BY LOSS OF THE GREEN FAIL/RESET LIGHT AND MR/HR METER INDICATION. SIMILARLY, PROCEDURES DO NOT EXIST FOR ACTIONS TO BE TAKEN WHEN FLOW OR FILTER FAULT ALARMS OCCUR ON RM-GW-101 AND RM-159, 160, 259 AND 260.

SUMMARY

INSPECTION SUMMARY

INSPECTION APRIL 15-17 (80-11): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 14 INSPECTOR-HOURS ON SITE IN THE AREAS OF STEAM GENERATOR SHIPMENT ACTIVITIES AND PREVIOUSLY IDENTIFIED ITEMS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 16-18 (80-12): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 12 INSPECTOR-HOURS ON SITE IN THE AREAS OF IE BULLETIN 79-14, "SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS," AND IE BULLETIN 79-02, "PIPE SUPPORT BASE PLATE DESIGNS USING CONCRETE EXPANSION ANCHOR BOLTS." OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; ONE DEVIATION WAS FOUND IN ONE AREA (FAILURE TO MEET COMMITMENT FOR TIMELY PERFORMANCE OF IEB 79-02 INSPECTIONS).

INSPECTION APRIL 16-18 (80-14): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 11 INSPECTOR-HOURS ON SITE IN THE AREA OF INSTALLED EQUIPMENT REVIEW WITH RESPECT TO THE IE BULLETIN 79-01B RESPONSE. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 23 AND 25 (80-16): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 10 INSPECTOR-HOURS ON SITE CONCERNING THE APRIL 14, 1980, SHIPMENT OF RADIOACTIVE WASTE FOR BURIAL INCLUDING SURVEYS, SHIPPING PAPER REQUIREMENTS, LABELING, PLACARDING AND RADIATION LEVELS. DETAILS I ADDRESSES INSPECTION ACTIVITIES AT THE WASTE DISPOSAL SITE. DETAILS II ADDRESSES INSPECTION ACTIVITIES AT SURRY POWER STATION. OF THE FIVE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN THREE AREAS; TWO ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (SEVERITY LEVEL II - VEHICLE SURFACE RADIATION LEVELS IN EXCESS OF REGULATORY LIMITS; AND SEVERITY LEVEL II - INADEQUATE SURVEY).

INSPECTION APRIL 29 - MAY 2 (80-18): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 14 INSPECTOR-HOURS ON SITE IN THE AREAS OF IE BULLETIN 79-02, "PIPE SUPPORT BASE PLATE DESIGN USING CONCRETE EXPANSION ANCHOR BOLTS"; IE BULLETIN 79-14, "SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS"; AND LICENSEE ACTIONS ON PREVIOUS INSPECTION FINDINGS. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED

INSPECTION APRIL 7 - MAY 2 (80-19): THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED 50 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS AND OPERATING RECORDS, PLANT MODIFICATIONS, MAINTENANCE AND TESTING, FOLLOWUP ON PREVIOUSLY IDENTIFIED ITEMS, AND PLANT SECURITY. OF THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE FOUND IN TWO AREAS; TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (INFRACTION - INADEQUATE PROCEDURES FOR RADIATION MONITORING EQUIPMENT MALFUNCTIONS; AND INFRACTION - FAILURE TO FOLLOW TEST PROCEDURE FOR DC 77-9).

INSPECTION MAY 5-8 (80-20): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 13 INSPECTOR-HOURS ON SITE IN THE AREAS OF SCOPING THE SURRY 2 INTEGRATED STARTUP TEST PROGRAM AS TO THE INSPECTIONS AND TESTS REQUIRED PRIOR TO RETURNING THE UNIT TO OPERATION AFTER THE STEAM GENERATOR REPAIR PROGRAM, REVIEW THE COMPLETED RESULTS OF THE PRIMARY HYDROSTATIC TESTS AND REVIEW OF THE GENERAL ELECTRICAL, INSTRUMENT AND MECHANICAL TEST PROCEDURES. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - INADEQUATE TEST PROCEDURE).

INSPECTION STATUS

ENFORCEMENT STATUS

FIRE DOOR IN PENETRATION BETWEEN UNIT 2 EMERGENCY SWITCHGEAR ROOM AND SERVICE BUILDING CABLE VAULT WAS BLOCKED IN THE OPEN POSITION ON APRIL 17, 1980 BY ELECTRICAL CABLE. TECHNICAL SPECIFICATION SECTION 3.21.G REQUIRES FIRE BARRIER PENETRATIONS TO BE FUNCTIONAL AT ALL TIMES OR IF NON-FUNCTIONAL A FIRE WATCH MUST BE ESTABLISHED ON AT LEAST ONE SIDE OF THE AFFECTED PENETRATION.
(8009 INFRACTION)

VEPCO LETTER SERIAL NUMBER 725 DATED SEPTEMBER 5, 1979 STATED THAT "ACCESSIBLE SUPPORTS WILL BE UPGRADED EXPEDITIOUSLY AS DEFICIENCIES ARE NOTED DURING PLANT OPERATION...AS REQUIRED BY IE BULLETIN 79-02". THIS LETTER FURTHER STATED THAT, "WE PLAN TOFULLY COMPLY WITH THE INTENT AND SCHEDULE OF BULLETIN 79-02...". A LETTER FROM REGION II TO VEPCO DATED SEPTEMBER 7, 1979 CONFIRMING ACTIONS TO BE TAKEN BY VEPCO RELATED TO RETURNING UNIT 1 TO SERVICE STATED THAT, "IT IS OUR UNDERSTANDING THAT AFTER YOU COMMENCE OPERATION OF UNIT 1, YOU WILL CONTINUE THE INSPECTIONS REQUIRED BY IEB 79-02 FOR ACCESSIBLE SYSTEMS". NRC INSPECTION REPORT 50-280/79-5E3 DATED SEPTEMBER 28, 1979 REITERATED THAT THE EXP EDITIOUS "COMPLETION OF THE REMAINING INSPECTIONS, TESTS, ANALYSES AND REPAIRS AS SPECIFIED IN IEB 79-02" WAS EXPECTED. AS OF APRIL 18, 1980 NONE OF THE ADDITIONAL INSPECTIONS OR TESTING REQUIRED FOR IE BULLETIN 79-02 HAD BEEN INITIATED. NO PROCEDURE HAD BEEN PREPARED FOR PERFORMANCE OF THIS WORK.
(8013 DEVIATION)

AS REQUIRED BY 10 CFR 50.59, THE LICENSEE MAY MAKE CHANGES IN THE FACILITY AS DESCRIBED IN THE SAFETY ANALYSIS REPORT (SAR) WITHOUT NRC APPROVAL, PROVIDED RECORDS OF THE CHANGES ARE MAINTAINED, INCLUDING WRITTEN SAFETY EVALUATIONS WHICH DETERMINE THAT THE CHANGE DOES NOT PRESENT AN UNREVIEWED SAFETY QUESTION. SAFETY EVALUATIONS AND RECORDS OR CERTAIN CHANGES MADE TO COMPONENTS DESCRIBED IN SECTION 6.3.1.4 OF THE SAR TO DETECT OR CONTROL LEAKS IN THE LHSI AND OUTSIDE RECIRCULATION SPRAY SUCTION PIPING WERE NOT MAINTAINED OR AVAILABLE ON MARCH 28, 1980. THE CHANGES INCLUDED THE VALVE PIT BAFFLES, WHICH WERE NOT INSTALLED TO ISOLATE THE SPRAY SUBSYSTEM LEAKAGE, AND THE PIT LIQUID LEVEL DETECTORS; ONLY ONE OF THE TWO LEVEL DETECTORS (PER UNIT) WERE INSTALLED.
(8014 INFRACTION)

AS REQUIRED BY 10 CFR 73.55(D)(7), THE LICENSEE SHALL POSITIVELY CONTROL ALL POINTS OF PERSONNEL AND VEHICLE ACCESS INTO VITAL AREAS. SECTION 5.3.1.3 OF THE SURRY POWER STATION SECURITY PLAN, WHICH IMPLEMENTS THE ABOVE, STATES, IN PART, THAT ALL VITAL AREA PORTALS ARE CONTROLLED BY ELECTRONIC LOCKS OR KEY LOCKS, OR BY ADMINISTRATIVE CONTROL OF SECURITY OR AUTHORIZED STATION OPERATING PERSONNEL. UNDER "DEFINITIONS" OF THE SECURITY PLAN, ADMINISTRATIVE CONTROL IS DEFINED AS THE MEANS BY WHICH AN ENTRANCE, GATE....ETC, IS EITHER LOCKED AND ALARMED OR UNDER THE DIRECT SUPERVISION AND CONTROL OF AN INDIVIDUAL AUTHORIZED UNESCORTED ACCESS TO THE AREA.... ON NOVEMBER 28, 1979, THE REACTOR CONTROL ROOM DOOR WAS FOUND STANDING OPEN, THE ALARM SYSTEM WAS IN "ACCESS" (OUT OF SERVICE), AND THE ENTRANCE ACCESS WAS NOT UNDER THE DIRECT SUPERVISION AND CONTROL OF AN INDIVIDUAL AUTHORIZED UNESCORTED ACCESS TO THE AREA; THUS, ACCESS INTO THIS VITAL AREA WAS NOT POSITIVELY CONTROLLED. AUTHORIZED PERSONNEL WERE CONTROLLING ACCESS FROM INSIDE THE CONTROL ROOM WHILE THE ALARM AND ACCESS SYSTEM WAS INOPERABLE.
(8014 DEFICIENCY)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4.A.2 AND 6.4.D THE DETAILED WRITTEN PROCEDURES WITH APPROPRIATE CHECK-OFF LISTS FOR THE CALIBRATION AND TESTING OF INSTRUMENTS, COMPONENTS, AND SYSTEMS INVOLVING NUCLEAR SAFETY SHALL BE FOLLOWED. CONTRARY TO THE ABOVE, THE UNIT 2 CONTAINMENT SPRAY CHEMICAL ADDITION FLOW AND LHSI VENTURI FLOW VERIFICATION TEST, CONDUCTED ON APRIL 15, 1980, TO VERIFY DESIGN CHANGE 77-9 MODIFICATIONS, WAS NOT PROPERLY FOLLOWED OR COMPLETED. ON APRIL 15 AND 16, 1980, THE FOLLOWING DISCREPANCIES WERE NOTED: (1) THE INITIAL CONDITIONS OF THE TEST REQUIRED THAT THE SAFETY INJECTION AND CONTAINMENT SPRAY SYSTEM WERE AVAILABLE FOR SERVICE PER OP-7.1 AND OP-7.2 RESPECTIVELY. VALVE ALIGNMENT CHECKLISTS OP-7.1 AND 7.2 WERE NOT COMPLETED PRIOR TO THE TEST, BUT WERE "VISUALLY CHECKED". DURING THE TEST, THE LHSI PUMP 2-SI-P-1B WAS OPERATED FOR SOME 30 MINUTES WITH THE PUMP SUCTION VALVE INADVERTENTLY CLOSED; (2) STEP 6.1.1 OF THE TEST PROCEDURE REQUIRED THE RWST WATER PH TO BE BETWEEN 4.0 AND 4.5; THE ACTUAL VALVE WAS 5.4 AND CORRECTIVE ACTION, DEVIATIONS, OR CHANGES TO THE PROCEDURE WERE NOT MADE; (3) STEP 6.2.2 OF THE PROCEDURE IS THE FIRST OF SEVERAL STEPS FOR CAT FLOW VERIFICATION WHICH WERE CONDUCTED BUT NOT SIGNED AND DATED; (4) ATTACHMENT IV TO THE PROCEDURE, WHICH VERIFIED TEST INSTRUMENTATION HOOK-UPS AND ATTACHMENTS WAS NOT COMPLETED; NONE OF THE SEVERAL STEPS WERE SIGNED OFF ALTHOUGH THE WORK WAS PERFORMED PRIOR TO CONDUCT OF THE TEST; AND (5) THE 13 FIELD CHANGES TO THE TEST WERE UNSIGNED AND WERE NOT APPROVED BY A LICENSED SRO PRIOR TO IMPLEMENTATION OF THE TEST.
(8019 INFRACTION)

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
NONE.				

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4.A.4, DETAILED WRITTEN PROCEDURES WITH APPROPRIATE CHECK-OFF LISTS AND INSTRUCTIONS SHALL BE PROVIDED FOR ACTIONS TO BE TAKEN FOR SPECIFIC AND FORESEEN MALFUNCTIONS OF SYSTEMS OR COMPONENTS INCLUDING ALARMS, PRIMARY SYSTEM LEAKS AND ABNORMAL REACTIVITY CHANGES. CONTRARY TO THE ABOVE, DETAILED WRITTEN PROCEDURES WITH APPROPRIATE CHECK-OFF LISTS AND INSTRUCTIONS HAVE NOT BEEN PROVIDED AS OF APRIL 25, 1980, FOR ACTIONS TO BE TAKEN WHEN CERTAIN INSTALLED RADIATION MONITORING COMPONENTS MALFUNCTION. CONSEQUENTLY, WHEN THE UNIT 2 RADIATION MONITOR (RM-RMS-262) ON THE MANIPULATOR CRANE INTERMITTENTLY FAILED ON APRIL 21 AND 22, 1980, DURING UNIT 2 REFUELING, APPROPRIATE PROMPT CORRECTIVE ACTION WAS NOT TAKEN TO CORRECT THE MALFUNCTION WHICH WAS INDICATED BY LOSS OF THE GREEN FAIL/RESET LIGHT AND MR/HR METER INDICATION. SIMILARLY, PROCEDURES DO NOT EXIST FOR ACTIONS TO BE TAKEN WHEN FLOW OR FILTER FAULT ALARMS OCCUR ON RM-GW-101 AND RM-159, 160, 259 AND 260.

PLANT STATUS:

UNIT IS CURRENTLY SHUT DOWN CONDUCTING PREOPERATIONAL TESTING. THE UNIT HAS BEEN REFUELED.

LAST IE SITE INSPECTION DATE: JUNE 6, 1980

INSPECTION REPORT NO: 50-281/80-21

SUMMARY

INSPECTION SUMMARY

INSPECTION APRIL 15-17 (80-12): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 14 INSPECTOR-HOURS ON SITE IN THE AREAS OF STEAM GENERATOR SHIPMENT ACTIVITIES AND PREVIOUSLY IDENTIFIED ITEMS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 16-18 (80-13): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 12 INSPECTOR-HOURS ON SITE IN THE AREAS OF IE BULLETIN 79-14, "SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS," AND IE BULLETIN 79-02, "PIPE SUPPORT BASE PLATE DESIGNS USING CONCRETE EXPANSION ANCHOR BOLTS." OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; ONE DEVIATION WAS FOUND IN ONE AREA (FAILURE TO MEET COMMITMENT FOR TIMELY PERFORMANCE OF IEB 79-02 INSPECTIONS).

INSPECTION APRIL 16-18 (80-15): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 12 INSPECTOR-HOURS ON SITE IN THE AREA OF INSTALLED EQUIPMENT REVIEW WITH RESPECT TO THE IE BULLETIN 79-01B RESPONSE. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 23 AND 25 (80-17): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 10 INSPECTOR-HOURS ON SITE CONCERNING THE APRIL 14, 1980, SHIPMENT OF RADIOACTIVE WASTE FOR BURIAL INCLUDING SURVEYS, SHIPPING PAPER REQUIREMENTS, LABELING, PLACARDING AND RADIATION LEVELS. DETAILS I ADDRESSES INSPECTION ACTIVITIES AT THE WASTE DISPOSAL SITE. DETAILS II ADDRESSES INSPECTION ACTIVITIES AT SURRY POWER STATION. OF THE FIVE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN THREE AREAS; TWO ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (SEVERITY LEVEL II - VEHICLE SURFACE RADIATION LEVELS IN EXCESS OF REGULATORY LIMITS; AND SEVERITY LEVEL II - INADEQUATE SURVEY).

INSPECTION APRIL 29 - MAY 2 (80-18). THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 14 INSPECTOR-HOURS ON SITE IN THE AREAS OF IE BULLETIN 79-02, "PIPE SUPPORT BASE PLATE DESIGN USING CONCRETE EXPANSION ANCHOR BOLTS"; IE BULLETIN 79-14, "SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS"; AND LICENSEE ACTIONS ON PREVIOUS INSPECTION FINDINGS. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 7 - MAY 2 (80-19): THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED 50 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS AND OPERATING RECORDS, PLANT MODIFICATIONS, MAINTENANCE AND TESTING, FOLLOWUP ON PREVIOUSLY IDENTIFIED ITEMS, AND PLANT SECURITY. OF THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE FOUND IN TWO AREAS; TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (INFRACTION - INADEQUATE PROCEDURES FOR RADIATION MONITORING EQUIPMENT MALFUNCTIONS; AND INFRACTION - FAILURE TO FOLLOW TEST PROCEDURE FOR DC 77-9).

INSPECTION MAY 5-8 (80-20): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 13 INSPECTOR-HOURS ON SITE IN THE AREAS OF SCOPING THE SURRY 2 INTEGRATED STARTUP TEST PROGRAM AS TO THE INSPECTIONS AND TESTS REQUIRED PRIOR TO RETURNING THE UNIT TO OPERATION AFTER THE STEAM GENERATOR REPAIR PROGRAM, REVIEW THE COMPLETED RESULTS OF THE PRIMARY HYDROSTATIC TESTS AND REVIEW OF THE GENERAL ELECTRICAL, INSTRUMENT AND MECHANICAL TEST PROCEDURES. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - INADEQUATE TEST PROCEDURE).

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS:

The plant remains shutdown, by NRC Order, pending completion of modifications and other actions related to the TMI-2 accident.

LAST IE SITE INSPECTION DATE: 5/31/80

INSPECTION REPORT NO: 50-289/80-13

SUMMARY

INSPECTION SUMMARY

50-289/80-02 - Feb 1-Mar 16: Special inspection by NRC TMI Program Office Staff of: daily and selected shift activities. The inspection included daily (Monday-Friday) NRC TMI staff coverage and day shift coverage, with selected backshifts included, by NRC shift radiation specialists.

50-289/80-04 - Feb 5-9: Routine, unannounced inspection by four regionally-based inspectors (162 hrs) of work activities and records associated with the Unit 1 Restart Program, including: engineering design, quality assurance audits, electrical and instrumentation (Modifications Nos. RM-1, RM-4, RM-8, RM-10 and LM-8A), fire protection (Modification No. NM-40), installation of the hydrogen recombiner (Modification No. RM-12), and tendon surveillance. No items of noncompliance were identified.

50-289/80-06 - Mar 1-31: Routine, unannounced inspection by four regionally-based inspectors (224 hrs) of work activities and records associated with the Unit 1 Restart Program, including: engineering design, quality assurance audits, electrical heat shrink tubing/butt splicing (Modifications Nos. RM-1 and RM-4), fire protection (Modification No. NM-40), inservice non-destructive examination (ISI NDE) program, upgrade of the decay heat system (Modification No. RM-2), installation of the hydrogen recombiner (Modification No. RM-12), high pressure safety injection cross-connect piping (Modification No. RM-14), upgrade of the waste gas system (Modification No. LM-5), replacement of pipes cracked by intergranular stress corrosion (Modification No. NM-17), review of licensee event report 80-03, and tendon surveillance. No items of noncompliance were identified.

50-289/80-12 - Apr 23-25: Physical Barriers (Protected Area); Physical Barriers (Vital Area); Lighting; Access Control (Identification, Authorization, and Badging); Access Control (Search); Access Control (Vital Areas); Assessment Aids; Communications; Testing and Maintenance; Response; and Record and Reports. The inspection was initiated as a result of the licensee having reported a possible unauthorized entry into the owner controlled area by a unidentified vehicle. The inspection involved 22 inspector-hours onsite by one regional based NRC inspector. The inspection was begun during nonregular hours; eight (8) inspector hours were spent during off shift periods. No items of noncompliance were identified. It was determined that no unauthorized entry into the owner-controlled area had actually taken place and, therefore, there had been no real or potential threat to the physical protection of the site.

LAST IE SITE INSPECTION DATE: 5/31/80

INSPECTION REPORT NO: 50-320/80-10

SUMMARY

INSPECTION SUMMARY

50-320/80-02 - Feb 1-Mar 16: Special inspection by NRC TMI Program Office Staff of: licensee action on previous inspection findings; selected new and revised procedures; daily and selected shift activities; water leak from makeup pump instrumentation on February 11, 1980; reactor building atmosphere sample on February 12-13, 1980; and construction/plans for processed water storage tanks. The inspection included daily (Monday-Friday) NRC TMI staff coverage and day shift coverage, with selected backshifts included, by NRC shift radiation specialists. Five items of noncompliance were identified: (Failure to properly train vendor personnel; Failure of operators to properly implement a facility procedure; Failure to obtain an adequate airborne survey; Failure to properly post radiation area; and Failure to adequately survey for airborne tritium activity).

LICENSE STATUS

By Order for Modification of License dated July 20, 1979, the licensee's authority to operate the facility was suspended and the licensee's authority was limited to maintenance of the facility in the present shutdown cooling mode (44 F.R. 45271).

(8005 INFRACTION)

10 CFR 20.203(F)(2) REQUIRES THAT CONTAINERS OF RADIOACTIVE MATERIAL "BEAR A...LABEL IDENTIFYING THE CONTENTS..." INCLUDING "SUFFICIENT INFORMATION TO PERMIT INDIVIDUALS HANDLING OR USING THE CONTAINERS, OR WORKING IN THE VICINITY THEREOF, TO TAKE PRECAUTIONS TO AVOID OR MINIMIZE EXPOSURES." CONTRARY TO THIS REQUIREMENT, ON APRIL 17, 1980 THE LABELS ON SEVERAL SHIELDED CONTAINERS OF RADIOACTIVE WASTE STORED IN THE WASTE STORAGE AREA DID NOT PROVIDE ANY INFORMATION ON THE CONTENTS EXCEPT THE RADIATION CAUTION SYMBOL AND THE WORDS, "CAUTION RADIOACTIVE MATERIAL."
(8007 DEFICIENCY)

TECHNICAL SPECIFICATION 2.2.4.3, APPENDIX B, REQUIRES THAT THE PH OF DISCHARGES TO THE COLUMBIA RIVER FALL WITHIN THE RANGE OF 6.0 TO 9.0. CONTRARY TO THIS REQUIREMENT, DURING A PERIOD OF ABOUT 15 MINUTES ON OCTOBER 18, 1979, TWO SPIKES OCCURRED WHERE THE PLANT EFFLUENT BEING RELEASED TO THE COLUMBIA RIVER WAS AT A PH OF 9.05 AND 9.2, RESPECTIVELY.
(8007 DEFICIENCY)

INSPECTION STATUS

SYSTEMS AND COMPONENT PROBLEMS:

Resolution of questions regarding concrete block walls is required prior to startup.

FACILITY ITEMS (PLANS AND PROCEDURES):

None.

MANAGERIAL ITEMS:

None.

PLANT STATUS

The plant commenced a refueling and maintenance outage on April 11, 1980. Startup is scheduled for late June 1980.

LAST IE SITE INSPECTION DATE: 05/01-30/80+

INSPECTION REPORT NO: 50-344/80-11+

SUMMARY

INSPECTION SUMMARY:

Inspection on April 14-18, 1980 (Report No. 50-344/80-07)
Areas Inspected: Refueling preparations including organization; training procedures; advanced planning and preparation; personnel monitoring and exposure control; respiratory protection program; surveys; radiation work permits; radioactive and contaminated material control; tour of facility; followup of unusual event reported by licensee; licensee action on IE Bulletin 79-19; and licensee investigation of steam generator radiation safety program. The inspection involved 40 hours onsite by one NRC inspector.

Results: No items of noncompliance were found in 11 of the 13 areas inspected. Two items of noncompliance were identified (Deficiency - pH in plant effluent exceeded technical specification limit; and Deficiency - Several containers in the waste storage yard were not labeled in accordance with 10 CFR 20.203(f)(2)).

Inspection on April 8, 1980 (Report No. 50-344/80-08)
Inspection is continuing.

Inspection on April 21-24, 1980 (Report No. 50-344/80-09)
Areas Inspected: Routine, unannounced inspection of review and audit program; QA/QC administration program; procedures; procurement program; test and measuring equipment program; receipt, storage and handling; and independent inspection effort. The inspection involved 42 inspector hours onsite by two NRC inspectors.

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-05/ 01T-0	04-11-80	04-22-80	Three of four MSIV's failed to close.
80-06/ 01T-0	04-25-80	05-08-80	One fuel rod failed in each of two fuel assemblies.

Results: No items of noncompliance or deviations were identified. One unresolved item concerning the neutron source range detectors was identified, whereupon the licensee committed to take corrective action.

Inspection on May 1-30, 1980 (Report No. 50-344/80-11)
Report being prepared; to be reported next month.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY SECTION 6.9.2.B.3 OF THE TECHNICAL SPECIFICATIONS, OBSERVED INADEQUACIES IN THE IMPLEMENTATION OF ADMINSTRATIVE OR PROCEDURAL CONTROLS WHICH THREATEN TO CAUSE REDUCTION OF DEGREE OF REDUNDANCY PROVIDED IN REACTOR PROTECTION SYSTEMS OR ENGINEERED SAFETY FEATURE SYSTEMS SHALL BE REPORTED TO THE NRC. THE LACK OF PROPER CONTROL AND DOCUMENTATION OF THE BRACKET FABRICATION AND INSTALLATION PROCESS ON THE EMERGENCY DIESEL GENERATOR AS DISCUSSED IN THE JUNE 8, 1979, PLANT NUCLEAR SAFETY COMMITTEE MINUTES WAS NOT REPORTED TO THE NRC.
(7926 DEFICIENCY)

AS REQUIRED BY SECTION 6.8.1 OF THE TECHNICAL SPECIFICATIONS, WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES THAT MEET OR EXCEED THE REQUIREMENTS AND RECOMMENDATIONS OF SECTION 5.1 AND 5.3 OF ANSI N18.7-1972 AND APPENDIX A OF USNRC REGULATORY GUIDE 1.33 SHALL BE IMPLEMENTED. THE FOLLOWING TWO EXAMPLES REPRESENT FAILURE TO IMPLEMENT EXISTING PROCEDURES: (1) REPLACEMENT OF THE ORIGINAL CONTROLLER FOR SPRAY VALVE PCV-3-455 B WITH A DIFFERENT TYPE CONTROLLER WHICH WAS IN USE DURING THE INSPECTION PERIOD WAS NOT PERFORMED UNDER THE GUIDELINES OF A.P. 190.15, "PLANT CHANGES AND MODIFICATIONS"; (2) NO TEMPORARY PROCEDURE HAD BEEN PROMULGATED TO INSURE CONTINUOUS UNDERSTANDING BETWEEN SHIFTS OF THE OPERATIONAL CONTROL OVER THE NEW SPRAY VALVE CONTROLLER AS REQUIRED BY A.P. 103.6, "TEMPORARY PROCEDURES".
(7926 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1 WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED THAT MEET OR EXCEED THE REQUIREMENTS OF APPENDIX "A" OF THE USNRC REGULATORY GUIDE 1.33. REGULATORY GUIDE 1.33, APPENDIX A, STATES IN PART THAT CHEMICAL AND RADIOCHEMICAL CONTROL PROCEDURES SHOULD BE WRITTEN TO PRESCRIBE THE NATURE AND FREQUENCY OF SAMPLING AND THAT THESE PROCEDURES SHOULD SPECIFY LABORATORY INSTRUCTIONS AND CALIBRATION OF LABORATORY EQUIPMENT. ON MARCH 26, 1980, THERE WERE NO WRITTEN PROCEDURES FOR EFFICIENCY CALIBRATION OF THE GE(LI) GAMMA SPECTROSCOPY SYSTEM AND THE LIQUID SCINTILLATION COUNTER. DURING THE PERIOD FROM MAY 1979 TO MARCH 1980, PROCEDURE NC-11, "GAS FLOW PROPORTIONAL COUNTER DAILY QUALITY CONTROL CHECK", WAS NOT FOLLOWED IN THAT RECOUNTS WERE NOT MADE WHEN THE DAILY CHECKS DID NOT MEET THE ACCEPTANCE CRITERIA.
(8015 DEFICIENCY)

BASED ON THE RESULTS OF THE NRC INSPECTION CONDUCTED ON FEBRUARY 1-29, 1980, CERTAIN OF YOUR ACTIVITIES APPEAR TO DEVIATE FROM YOUR COMMITMENTS TO THE COMMISSION. AS INDICATED IN PARAGRAPH 5 OF IE INSPECTION REPORT 50-250-251/79-26, A COMMITMENT WAS MADE TO HAVE AVAILABLE BY OCTOBER 1979, FOR USE IN FINAL, APPROVED FORM, PROCEDURES COVERING THE FOLLOWING: (1) AUXILIARY FEEDWATER PUMP TURBINE OVERHAUL; (2) AUXILIARY FEEDWATER PUMP TURBINE THROTTLE TRIP VALVE OVERHAUL; (3) AUXILIARY FEEDWATER PUMP OVERHAUL AND MAINTENANCE. SUCH PROCEDURES HAD NOT BEEN MADE AVAILABLE FOR USE IN FINAL APPROVED FORM AS OF FEBRUARY 28, 1980.
(8010 INFRACTION)

AS INDICATED IN PARAGRAPH 5 OF IE INSPECTION REPORT 50-250-251/79-26, A COMMITMENT WAS MADE TO HAVE AVAILABLE BY OCTOBER 1979, FOR USE IN FINAL, APPROVED FORM, PROCEDURES COVERING THE FOLLOWING: (1) AUXILIARY FEEDWATER PUMP TURBINE OVERHAUL; (2) AUXILIARY FEEDWATER PUMP TURBINE THROTTLE TRIP VALVE OVERHAUL; (3) AUXILIARY FEEDWATER PUMP OVERHAUL AND MAINTENANCE. SUCH PROCEDURES HAD NOT BEEN AVAILABLE FOR USE IN FINAL APPROVED FORM AS OF FEBRUARY 28, 1980.
(8010 DEVIATION)

AS INDICATED IN TABLE 9-1 PARAGRAPH C.2.(C) OF YOUR FEBRUARY 25, 1977, FIRE HAZARDS ANALYSIS, THE FIRE PUMP INSTALLATION COMPLIES WITH NFPA-20. AUDIBLE OR VISUAL ALARMS AT A POINT OF CONSTANT ATTENDANCE WHICH WOULD ALARM UPON LOSS OF POWER ON THE LINE SIDE OF THE MOTOR STARTER WERE NOT PROVIDED AS REQUIRED BY NFPA-20, IN THE INSTALLATION OF THE FIRE PUMPS.
(8015 DEVIATION)

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-006/ 03L-0	03/16/80	04/15/80	FAILURE TO PERFORM SURVEILLANCE OF VALVE POSITION FOR CERTAIN FIRE MAIN VALVES.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 71.5(A) "TRANSPORTATION OF LICENSED MATERIAL," REQUIRES THAT NRC LICENSEES COMPLY WITH THE APPLICABLE PACKAGING AND TRANSPORTATION REQUIREMENTS OF THE U.S. DEPARTMENT OF TRANSPORTATION IN 49 CFR PARTS 170-189. 49 CFR 173.393(I) REQUIRES THAT ALL RADIOACTIVE MATERIALS MUST BE PACKAGED IN SUITABLE PACKAGING (SHIELDED, IF NECESSARY) SO THAT AT ANY TIME DURING NORMAL CONDITIONS INCIDENT TO TRANSPORTATION, THE RADIATION DOSE RATE DOES NOT EXCEED 200 MILLIREM PER HOUR AT ANY POINT ON THE EXTERNAL SURFACE OF THE PACKAGE. CONTRARY TO THE ABOVE, ON FEBRUARY 7, 1980, THE LICENSEE, AS CONSIGNOR, DELIVERED A PACKAGE OF LOW SPECIFIC ACTIVITY (LSA) RADIOACTIVE MATERIAL TO A CARRIER FOR TRANSPORT WITH A RADIATION DOSE RATE EXCEEDING 200 MILLIREM PER HOUR, AS EVIDENCED BY A MEASURED LEVEL OF 300 MILLIREM PER HOUR FROM AN UNDERNEATH EXTERNAL SURFACE OF THE VEHICLE UPON ITS ARRIVAL AT THE RICHLAND, WASHINGTON, WASTE BURIAL SITE ON FEBRUARY 14, 1980. (8003 VIOLATION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

On May 16, 1980, operators noted a temperature drop on the exit of the AOG Recombiner. Preliminary investigation indicated hydrogen recombination upstream of the Recombiner. System temperatures returned to normal on May 17, 1980 following performance of turbine surveillance which bypassed steam into condenser. Licensee Event Report 80-19/1P was issued, investigation is continuing.

FACILITY ITEMS (PLANS AND PROCEDURES):

Unit refueling outage is scheduled for September 1980.

MANAGERIAL ITEMS:

Management meeting between licensee and Region I staff scheduled for June 27, 1980, at the Vermont Yankee site.

PLANT STATUS:

Routine operations at rated power with plant cooling towers in service. Offgas and stack release rates are 3360 mc/sec and less than 100 mc/sec, respectively.

LAST IE SITE INSPECTION DATE: 5/23/80

INSPECTION REPORT NO: 50-271/80-07

SUMMARY

INSPECTION SUMMARY

50-271/80-03 - Feb 21: Special unannounced inspection by two regionally-based inspectors (8 hrs) of the circumstances surrounding a shipment of low specific activity (LSA) radioactive waste on a tractor-trailer which had radiation levels above the DOT limits given in 49 CFR 173.393(j), when the tractor-trailer arrived at the Nuclear Engineering Company (NECO), Richland, Washington, burial site. Another region-based inspector discussed the reporting of significant events with the licensee. One item of noncompliance was identified: (Failure to package a low specific activity (LSA) waste package so that the radiation levels from the surface of the package were within the limits given in 49 CFR 173.393(i)).

FACILITY ITEMS (PLANS AND PROCEDURES):

Licensee has commenced outage maintenance and modifications on fire protection systems, containment isolation systems, steam generator seismic supports and emergency feedwater system.

PLANT STATUS:

Plant remains shutdown and cooled down. LP turbine repairs will continue thru September, 1980.

LAST IE SITE INSPECTION DATE: 5/27/80

INSPECTION REPORT NO: 50-29/80-10

SUMMARY

INSPECTION SUMMARY

50-29/80-02 - Jan 28-Feb 5: Routine, unannounced inspection by two regionally-based inspectors (55 hrs) of plant operations, including a tour of accessible areas, a review of shift logs, operating and shutdown records; observing maintenance activities; review and onsite followup of Licensee Event Reports (LER's); followup of selected IE Bulletins; and, a review of Category "A" Short Term Lessons Learned Items. Two items of noncompliance were identified: (Failure to maintain a required Emergency Core Cooling System operable during operation; and Failure to follow procedures).

50-29/80-03 - Feb 15-19: Special, unannounced inspection by a regionally-based inspector (33 hrs) of the circumstances surrounding the failure of Low Pressure Turbine. No items of noncompliance were identified.

50-29/80-04 - Feb 27: Management meeting held at NRC request to discuss details related to the establishment of an onsite office for the purpose of placing a full-time NRC inspector at the facility. All parties concurred on administrative and operational considerations needed to establish an onsite NRC inspector.

50-29/80-07 - Mar 17-24: Routine, unannounced inspection by two regionally-based inspectors (46 hrs) of licensee emergency procedures for small-break loss of coolant accidents; review of Licensee Event Reports (LERs) and Monthly Operating Reports. No items of noncompliance were identified.

PLANT STATUS

Unit 1 operating routinely.

LAST IE SITE INSPECTION DATE: April 14-30, 1980

INSPECTION REPORT NO: 80-07

SUMMARY

INSPECTION SUMMARY

Inspection on February 7 through March 28, (80-03): Routine resident inspection of plant operations, review of licensee events, plant modifications, compliance with confirmatory order, emergency procedure review, and non-licensed training. The inspection involved 122 inspector hours onsite by one NRC inspector. Of the areas inspected, one item of noncompliance was identified (violation of minimum shutdown margin requirements while in cold shutdown).

Inspection on March 18, (80-04): Nonroutine, announced inspection of confirmatory measurements program including: (1) a discussion of confirmatory measurement results from a previous sample collection, which included the submission of spiked samples, and (2) the collection of effluent samples and the submission of spiked samples for future comparative analyses. The inspection involved 8.5 inspector hours onsite by one NRC inspector. Within the areas inspected, no apparent items of noncompliance or deviations were noted.

Inspection on March 10-11 and April 17-18, (80-06): Small Break LOCA Procedure. Inspection involved 30 inspector hours onsite by two NRC inspectors. Of the areas inspected, no items of noncompliance were identified.

Inspection on April 14-30, (80-07): Announced inspection by the Resident Inspector of certain licensee actions taken to comply with the Confirmatory Order issued February 29, 1980. The inspection involved 20 inspector hours onsite by one NRC inspector. No items of noncompliance were identified.

Facility	Core Size[a] (No. of Assemblies)	Present Authorized Storage Pool Capacity (Fuel Assemblies)	No. of Assemblies Stored	Remaining Capacity (No. of Assemblies)	Remaining Capacity If Pending Request Approved (No. of Assemblies)	Scheduled Date For Next Refueling	~~Will Fill Present~~[k] ~~Authorized Capacity~~
II. Boiling Water Reactors							
III. Independent Spent Fuel Storage Installations (h)							
Morris Operations		750 MTU (j)	315	385 MTU (j)	1490 MTU (j)		
NFS(i)		250 MTU	170 MTU	80 MTU			

(a) At each refueling outage approximately 1/3 of a PWR core and 1/4 of a BWR core is off-loaded.
(b) Some of these dates have been adjusted by staff assumptions.
(c) This is the total for both units.
(d) Plant not in commercial operation.
(e) Some spent fuel stored at Brunswick.
(f) Authorized a total 2088 BWR and 304 PWR assemblies for both pools.
(g) Robinson 2 assemblies being shipped to Brunswick for storage.
(h) Capacity is in metric tons of uranium; 1 MTU = 2 PWR assemblies or 5 BWR assemblies.
(i) No longer accepting spent fuel.
(j) Racked for 700 MTU.
(k) ~~Reserved~~
(l) This is the station total.

N/S = Not Scheduled

REACTOR-YEARS OF EXPERIENCE

AS OF 5-31-80

The total of Reactor years of experience is as the sum of all calendar days for each unit, from the date that electricity was first generated until a final shutdown date or the status date, whichever comes first, divided by 365.25 days/year.

If a date is unknown, the first day of the first month of operation is substituted. Units which have not yet generated electricity but which are licensed are listed but not included in the computation.

LICENSED OPERATING REACTORS

READEX FICHE

AUTHORIZATION AND CLEARANCE

THE U.S. NUCLEAR REGULATORY COMMISSION'S OFFICE OF MANAGEMENT AND PROGRAM ANALYSIS PUBLISHES THIS MONTHLY STATUS REPORT "AS PART OF THE REPORTING REQUIREMENTS IN SECTION 50.36 OF 10 CFR PART 50 UNDER GAO CLEARANCE NUMBER B-180225, WITH AN EXPIRATION DATE OF SEPTEMBER 30, 1981," AS STATED IN THE OCTOBER 3, 1978 LETTER FROM JOHN M. LOVELADY, ASSISTANT DIRECTOR, GENERAL GOVERNMENT DIVISION, U. S. GENERAL ACCOUNTING OFFICE, TO J.M. FELTON, DIRECTOR, DIVISION OF RULES AND RECORDS, U.S. NUCLEAR REGULATORY COMMISSION.

STATEMENT OF PURPOSE

The U. S. Nuclear Regulatory Commission's monthly OPERATING UNITS STATUS REPORT – LICENSED OPERATING REACTORS, provides data on the operation of nuclear units as timely and accurately as possible. This information is collected by the Office of Management and Program Analysis from the Headquarters Staff of NRC's Office of Inspection and Enforcement, from NRC's Regional Offices, and from utilities. Since all of the data concerning operation of the units is provided by the utility operators less than two weeks after the end of the month, necessary corrections to published information are shown on the ERRATA page.

This report is divided into three sections: the first contains monthly highlights and statistics for commercial operating units, and errata from previously reported data; the second is a compilation of detailed information on each unit, provided by NRC Regional Offices, IE Headquarters and the Utilities; and the third section is an appendix for miscellaneous information such as spent fuel storage capability, reactor-years of experience and non-power reactors in the United States.

The percentage computations, Items 19 through 24 in Section 2, the vendor capacity factors on page 1-4, and actual vs. potential energy production on Page 1-2 are computed from actual power production from the period of consideration. The percentages listed in power generation on Page 1-2 are computed as an arithmetical average. The factors for the life-span of each unit (the "Cumulative" column) are reported by the utility and are not entirely re-computed by NRC. Utility power production data is checked for consistency with previously submitted statistics.

In some cases, the numbers in the "Cumulative" column may have been totaled from a date that is different from the date of commercial operation. In these cases, the column is noted with an explanation of the nature of the change on each individual plant page in Section 2.

It is hoped this status report proves informative and helpful to all agencies and individuals interested in analyzing trends in the nuclear industry which might have safety implications, or in maintaining an awareness of the U. S. energy situation as a whole.

TABLE OF CONTENTS

GLOSSARY ii
INDEX TO LICENSED UNITS iii

SECTION 1 – CURRENT DATA SUMMARIES

MONTHLY HIGHLIGHTS OF COMMERCIAL NUCLEAR POWER UNITS 1-2

- Licensed Power Reactors 1-2
- Power Generation 1-2
- Actual vs. Potential Energy Production 1-2
- Outage Data 1-2
- Derated Units 1-2
- Shutdowns - Number and Reasons 1-3
- Unit Availability, Capacity, and Forced Outage Rate 1-3
- Refueling Schedule 1-3

AVERAGE CAPACITY FACTORS BY VENDOR 1-4

AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIAL OPERATING UNITS 1-5

ERRATA 1-7

SECTION 2 – OPERATING POWER REACTORS

ARKANSAS 1 THROUGH ZION 2 PAGES A–2 TO Z–5

- Facility Data
- Inspection and Enforcement Status
- Reports Received from Licensee
- Operating Status
- Average Daily Power Level (MWe)
- Unit Shutdowns/Reductions

SECTION 3 – APPENDIX

STATUS OF SPENT FUEL STORAGE CAPABILITY 3-2
REACTOR-YEARS OF EXPERIENCE 3-3
NON-POWER REACTORS IN THE U.S. 3-4

GLOSSARY

AVERAGE DAILY POWER LEVEL (MWe)	The net electrical energy generated during the day (measured from 0001 to 2400 hours inclusive) in megawatts hours divided by 24 hours.
LICENSED THERMAL POWER (MWt)	The maximum thermal power of the reactor authorized by the NRC, expressed in megawatts.
DATE OF COMMERCIAL OPERATION	Date unit was declared by utility owner to be available for the regular production of electricity; usually related to satisfactory completion of qualification tests as specified in the purchase contract and to accounting policies and practices of utility.
DESIGN ELECTRICAL RATING (DER) (Net MWe)	The nominal net electrical output of the unit specified by the utility and used for the purpose of plant design.
FORCED OUTAGE	An outage required to be initiated no later than the weekend following discovery of an off-normal condition.
FORCED OUTAGE HOURS	The clock hours during the report period that a unit is unavailable due to forced outages.
GROSS ELECTRICAL ENERGY GENERATED (MWH)	Electrical output of the unit during the report period as measured at the output terminals of the turbine generator, in megawatts hours.
GROSS HOURS	The clock hours from the beginning of a specified situation until its end. For outage durations, the clock hours during which the unit is not in power production.
GROSS THERMAL ENERGY GENERATED (MWH)	The thermal energy produced by the unit during the report period as measured or computed by the licensee in megawatt hours.
HOURS GENERATOR ON-LINE	Also, "Unit Service Hours." The total clock hours in the report period during which the unit operated with breakers closed to the station bus. These hours added to the total outage hours experienced by the unit during the report period, shall equal the hours in the report period.
HOURS IN REPORTING PERIOD	For units in power ascension at the end of the period, the gross hours from the beginning of the period or the first electrical production, whichever comes last, to the end of the period. For units in commercial operation at the end of the period, the gross hours from the beginning of the period or of commercial operation, whichever comes last, to the end of the period or decommissioning, whichever comes first.
HOURS REACTOR CRITICAL	The total clock hours in the report period during which the reactor sustained a controlled chain reaction.
MAXIMUM DEPENDABLE CAPACITY (GROSS) (MDC Gross) (Gross MWe)	Dependable main-unit gross capacity, winter or summer, whichever is smaller. The dependable capacity varies because the unit efficiency varies during the year due to cooling water temperature variations. It is the gross electrical output as measured at the output terminals of the turbine generator during the most restrictive seasonal conditions (usually summer).
MAXIMUM DEPENDABLE CAPACITY (NET) (MDC Net) (Net MWe)	Maximum Dependable Capacity (Gross) less the normal station service loads.
NAMEPLATE RATING (Gross MWe)	The nameplate power designation of the generator in megavolt amperes (MVA) times the nameplate power factor of the generator. NOTE: The nameplate rating of the generator may not be indicative of the maximum or dependable capacity, since some other item of equipment of a lesser rating (e.g., turbine) may limit unit output.
NET ELECTRICAL ENERGY GENERATED	Gross electrical output of the unit measured at the output terminals of the turbine generator during the reporting period, minus the normal station service electrical energy utilization. If this quantity is less than zero, a negative number should be recorded.
OUTAGE	A situation in which no electrical production takes place.
OUTAGE DATE	As reported on Appendix D of Reg. Guide 1.16, the date of the start of the outage. If continued from a previous month, report the same outage date but change "Method of Shutting Down Reactor" to "4 (Other)" and add a note: "Continued from previous month."
OUTAGE DURATION	The total clock hours of the outage measured from the beginning of the report period or the outage, whichever comes last, to the end of the report period or the outage, whichever comes first.
OUTAGE NUMBER	A number unique to the outage assigned by the licensee. The same number is reported each month in which the outage is in progress. One format is "76-05" for the fifth outage to occur in 1976.
PERIOD HOURS	See "Hours in Reporting Period."
POWER REDUCTION	A reduction in the Average Daily Power Level of more than 20% from the previous day. All power reductions are defined as outage of zero hours durations for the purpose of computing unit service and availability factors, and forced outage rate.

REACTOR AVAILABLE HOURS	The total clock hours in the report period during which the reactor was critical or was capable of being made critical. (Reactor Reserve Shutdown Hours + Hours Reactor Critical.)
REACTOR AVAILABILITY FACTOR	$\frac{\text{Reactor Available Hours} \times 100}{\text{Period Hours}}$
REACTOR RESERVE SHUTDOWN	The cessation of criticality in the reactor for administrative or other similar reasons when operation could have been continued.
REACTOR RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the reactor is in reserve shutdown mode. NOTE: No credit is given for NRC imposed shutdowns.
REACTOR SERVICE FACTOR	$\frac{\text{Hours Reactor Critical} \times 100}{\text{Period Hours}}$
REPORT PERIOD	Usually, the preceding calendar month. Can also be the preceding calendar year, (Year-to-Date), or the life-span of a unit (cumulative).
RESTRICTED POWER LEVEL	Maximum net electrical generation to which the unit is restricted during the report period due to the state of equipment, external conditions, administrative reasons, or a direction by NRC.
SCHEDULED OUTAGE	Planned removal of a unit from service for refueling, inspection, training, or maintenance. Those outages which do not fit the definition of "Forced Outage" perforce are "Scheduled Outages."
STARTUP AND POWER ASCENSION TEST PHASE	Period following initial criticality during which the unit is tested at successively higher levels, culminating with operation at full power for a sustained period and completion of warranty runs. Following this phase, the utility generally considers the unit to be available for commercial operation.
UNIT	The set of equipment uniquely associated with the reactor, including turbine generators, and ancillary equipment, considered as a single electrical energy production facility.
UNIT AVAILABLE HOURS	The total clock hours in the report period during which the unit operated on-line or was capable of such operation. (Unit Reserve Shutdown Hours + Hours Generator On-Line.)
UNIT AVAILABILITY FACTOR*	$\frac{\text{Unit Available Hours} \times 100}{\text{Period Hours}}$
UNIT CAPACITY FACTORS	
– Using Licensed Thermal Power	$\frac{\text{Gross Thermal Energy Generated} \times 100}{\text{Period Hours} \times \text{Lic. Thermal Power}}$
– Using Nameplate Rating	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{Nameplate Rating}}$
– Using DER	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{DER}}$
– Using MDC Gross	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Gross}}$
– Using MDC Net	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Net}}$

NOTE: if MDC Gross and/or MDC Net have not been determined, the DER is substituted for this quantity for Unit Capacity Factor calculations.

UNIT FORCED OUTAGE RATE	$\frac{\text{Forced Outage Hours}}{\text{Unit Service Hours} + \text{Forced Outage Hours}}$
UNIT RESERVE SHUTDOWN	The removal of the unit from on-line operation for economic or other similar reasons when operation could have been continued.
UNIT RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the unit was in reserve shutdown mode.
UNIT SERVICE FACTOR	$\frac{\text{Unit Service Hours} \times 100}{\text{Period Hours}}$
UNIT SERVICE HOURS	See "Hours Generator On-Line."

SECTION 1 – CURRENT DATA SUMMARIES

MONTHLY HIGHLIGHTS OF COMMERCIAL NUCLEAR POWER UNITS

FOR MONTH OF

JUNE 1980

LICENSED POWER REACTORS:

NUMBER		CAPACITY [1] MWe (Net)
67	IN COMMERCIAL OPERATION	49,010
67 [2]	LICENSED TO OPERATE	49,010
3 [3]	LICENSED FOR FUEL LOADING AND LOW POWER TESTING	

POWER GENERATION	REPORT MONTH	PREVIOUS MONTH	YEAR-TO-DATE
1. GROSS ELECTRICAL (MWHE)	19,331,405	19,313,241	118,987,817
2. NET ELECTRICAL (MWHE)	18,363,856	18,384,016	113,333,148
3. AVG. UNIT SERVICE FACTOR (%)	59.2	57.0	59.2
4. AVERAGE UNIT AVAILABILITY FACTOR (%)	59.2	57.0	59.4
5. AVERAGE UNIT CAPACITY FACTOR (MDC) (%)	52.1	48.8	52.4
6. AVG. UNIT CAPACITY FACTOR (DER) (%)	50.6	47.6	51.1
7. FORCED OUTAGE RATE (%)	12.3	10.6	11.0

NOTES

[1] BASED UPON MAXIMUM DEPENDABLE CAPACITY; DESIGN ELECTRIC RATING USED IF MDC NOT DETERMINED.

[2] EXCLUDES HUMBOLDT BAY (DER = 65), AND THREE MILE ISLAND 2 (DER = 906) WHICH HAVE OPERATING LICENSES BUT ARE SHUTDOWN INDEFINITELY AND INDIAN POINT 1 WHICH IS TO BE DECOMMISSIONED.

[3] SEQUOYAH 1 (DER =1148) WAS LICENSED ON FEBRUARY 29, 1980
NORTH ANNA 2 (DER = 907) WAS LICENSED ON APRIL 11, 1980
SALEM 2 (DER =1115) WAS LICENSED ON APRIL 18, 1980

ACTUAL VS. POTENTIAL ENERGY PRODUCTION

			% OF POTENTIAL PRODUCTION
POTENTIAL ENERGY PRODUCTION IN THIS PERIOD BY UNITS IN COMMERCIAL OPERATION (Using Maximum Dependable Capacity Net)		35,304,480 MWHe	
ENERGY ACTUALLY PRODUCED DURING THIS REPORT PERIOD	=	18,363,856 MWHe NET	52.0
ENERGY NOT PRODUCED DURING THIS REPORT PERIOD DUE TO SCHEDULED OUTAGES (NET)	=	10,472,972 MWHe	29.7
ENERGY NOT PRODUCED DURING THIS REPORT PERIOD DUE TO FORCED OUTAGES (NET)	=	4,085,776 MWHe	11.6
ENERGY NOT PRODUCED DURING THIS REPORT PERIOD FOR OTHER REASONS (NET)	=	2,381,875 MWHe	6.7
TOTAL		35,304,480 MWHe =	100%
ENERGY NOT PRODUCED THIS REPORT PERIOD DUE TO NRC IMPOSED SHUTDOWNS AND RESTRICTIONS	=	1,921,642 MWHe	5.4
NUMBER OF UNITS WITH POWER RESTRICTIONS IMPOSED BY NRC	=	1	

OUTAGE DATA

	NUMBER	HOURS	PERCENT OF CLOCK TIME	MWHE LOST PRODUCTION
1. FORCED OUTAGES DURING MONTH	65	5,206.7	10.8	4,085,776
2. SCHEDULED OUTAGES DURING THE MONTH	41	14,435.7	29.9	10,472,972
3. TOTAL	106	19,642.4	40.7	14,558,749

MWHE LOST PRODUCTION = Down time x maximum dependable capacity net

OCONEE 3	45.9
RANCHO SECO 1	96.6
THREE MILE ISLAND 1	.0

8 UNITS

	GE BWR's	W PWR's	CE PWR's	B&W PWR's	All PWR's
NET ELECTRICAL PRODUCTION	7,079,122	6,654,188	2,790,930	1,708,352	11,153,470
MDC NET	17,351	18,413	6,090	6,737	31,240
CFMDC	56.7	50.2	63.7	35.2	49.6

Capacity factor in this page, denoted as CFMDC, is a function of the net maximum dependable capacity. See the corresponding definition in the Glossary. The vendor averages are computed by the formula:

$$\frac{\text{Net Electrical Energy Produced by Vendor}}{\text{Potential Electrical Production By Vendor In This Month.}} \text{ X } 100\%$$

Units Excluded	Reason for Exclusion
Humboldt Bay Three Mile Island 2	Unit Shutdown Indefinitely
Big Rock Point	Not Representative of Typical BWRs
LaCrosse	Not Representative of Typical BWRs and Atypical Vendor
Fort St. Vrain	Atypical Vendor and Reactor Design

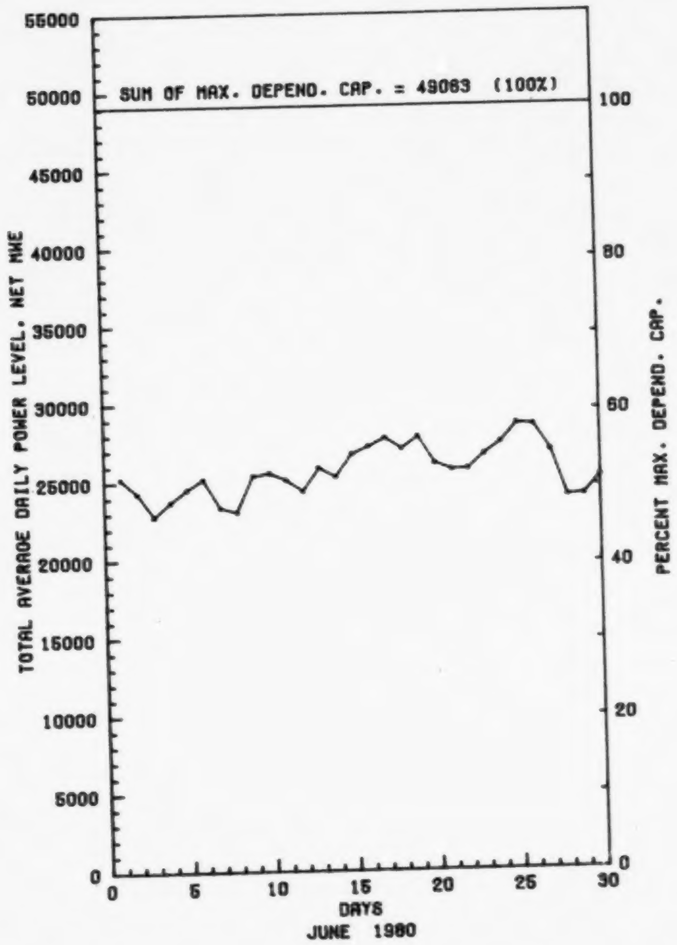
AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIALLY OPERATING UNITS

This chart depicts the average daily power level for the units in commercial operation during the month.

The straight line on the graph labelled "SUM OF MAX. DEPEND. CAP." is plotted at the value shown by summing the separate maximum dependable capacities of the commercially operating units (in Net MWe). The plot shown below the line is calculated by summing the separate average daily power levels of the commercially operating units for each day of the month.

The scale on the left vertical axis runs in 1,000 MWe increments from 0 to 55,000 MWe (Net). The right vertical axis shows the percentage in 10% increments, up to 100% of the "SUM OF MAX. DEPEND. CAP."

It should be recognized that the 100% line would be obtainable only if all of the commercially operating units operated at 100% capacity, 24 hours per day, for the entire month. In other words, since any power generator must occasionally shut down to refuel and/or perform needed maintenance, and also since 100% capacity production is not always required by power demands, the 100% line is a theoretical goal and not a practical one.



ERRATA

Corrections and Amendments to Previously-Reported Data

(NOTE: These changes are reflected in the data contained in the current report)

SUMMARY

INSPECTION SUMMARY

INSPECTION DURING APRIL 22 - MAY 21, 1980 (80-07): ROUTINE, ANNOUNCED INSPECTION INCLUDING CONFIRMATORY ORDER FOLLOW-UP, FOLLOW-UP ON IE BULLETIN 79-27, FOLLOW-UP ON OPEN ITEM, OPERATIONAL SAFETY VERIFICATION, AND REACTOR COOLANT PUMP SEAL FAILURE. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DURING MAY 27 - 30, 1980 (80-09): ROUTINE, UNANNOUNCED INSPECTION OF DESIGN CHANGES AND MODIFICATION PROGRAM, AND TEST AND EXPERIMENT PROGRAM. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TECHNICAL SPEC 6.8.1, THE LICENSEE FAILED TO FOLLOW STEP 4.20 OF PROCEDURE 1004.14, "JOB ORDERS" IN THAT THE JUNCTION BOX COVERS WERE NOT REPLACED ON A HPSI CONTROL VALVE PRIOR TO DOCUMENTING COMPLETION OF ELECTRICAL MAINTENANCE ON THE VALVE AND RETURNING THE VALVE TO OPERATION.
(8007 INFRACTION)

CONTRARY TO TECH SPEC 6.8.1, THE LICENSEE FAILED TO FOLLOW THE REQUIREMENTS OF PROCEDURE 1005.04 IN THAT: 1. ENTRIES HAD NOT BEEN CLEARED IN LOG AFTER JUMPER/BYPASS HAD BEEN REMOVED. 2. DUPLICATE TAG NUMBERS WERE ISSUED FOR TWO SEPARATE TAGOUTS. 3. COMPLETED PAGES OF THE LOG HAD NOT BEEN FORWARDED TO THE NUC. PLANT ADMINISTRATOR FOR FILING.
(8009 INFRACTION)

AT THE END OF THIS PERIOD, THE UNIT WAS IN AN OUTAGE FOR REACTOR COOLANT PUMP SEAL REPLACEMENT.

LAST IE INSPECTION DATE: MAY 27 - 30, 1980

INSPECTION REPORT NO: 50-368/80-09

SUMMARY

INSPECTION SUMMARY

INSPECTION DURING APRIL 22 - MAY 21, 1980 (80-07): ROUTINE, ANNOUNCED INSPECTION INCLUDING FOLLOW-UP ON IE BULLETIN 79-27, LICENSEE REVIEW OF POWER ASCENSION TEST RESULTS, FOLLOW-UP ON LICENSEE EVENT REPORTS, INSPECTOR REVIEW OF POWER ASCENSION TEST DATA, FOLLOW-UP ON OPEN ITEM, ISOTHERMAL TEMPERATURE AND POWER COEFFICIENTS OF REACTIVITY, CORE POWER DISTRIBUTION OPERATIONAL SAFETY VERIFICATION, AND SURVEILLANCE OBSERVATION. WITHIN THE NINE AREAS INSPECTED, ONE ITEM OF NONCOMPLIANCE WAS IDENTIFIED (INFRACTION - ADHERENCE TO PROCEDURE).

INSPECTION DURING MAY 27 - 30, 1980 (80-09): ROUTINE, UNANNOUNCED INSPECTION OF DESIGN CHANGES AND MODIFICATION PROGRAM, AND TEST AND EXPERIMENT PROGRAM. WITHIN THE TWO AREAS INSPECTED, ONE APPARENT ITEM OF NONCOMPLIANCE WAS NOTED (INFRACTION - FAILURE TO ADHERE TO PROCEDURES).

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS (PLANS AND PROCEDURES):

- Refueling/modification outage commenced 11/30/79; outage is expected to continue until at least 7/22/80.

PLANT STATUS:

- In cold shutdown. Major modifications are underway on the following safety-related systems: Bergen-Patterson large bore snubbers; containment spray pumps; refueling water storage tank; low head safety injection pumps; pipe hangers, support, and base plate inspection; reactor coolant pump motors; auxiliary feedwater pumps; and low pressure turbine rotors.
- LAST IE SITE INSPECTION DATE: 6/30/80
- INSPECTION REPORT NO: 50-334/80-19

SUMMARY

INSPECTION SUMMARY

- No reports issued.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-0039P	05/15/80	06/09/80	Met computer moved from Pgh to site. Certain output resistors not removed after reinstallation caused faulted signals. Resistors removed. System calibrated satisfactory.
80-003/01T	01/24/80	06/02/80	Component cooling water restraint H-95 seismic inadequacy resulted in alteration of support to a 3-way restraint.
80-026/03L	04/22/80	05/21/80	Unplanned liquid discharge occurred due to improper valve alignment and effluent valve seat leakage. No discharge limits were exceeded as a result of the discharge.
80-027/03L	04/30/80	05/28/80	Failure of EDG cooling water check valve had potential to degrade EDG cooling capability. Valves overhauled. Licensee to inspect other similar valves.
80-028/03L	05/04/80	06/02/80	Power lost to No. 4 vital bus inverter due to blown main power supply fuse. Plant was in mode 5 and opposite train inverter in service.
80-030/01T	05/19/80	06/02/80	Diesel fire pump oos due overheating. Electric fire pump oos. Portable diesel fire pump hooked into fire main with a second portable pump to be hooked up until repair effected.
80-031/01T	05/21/80	06/04/80	RHR high point vent nipple leak isolation caused RHR loss due false high press signal from inst loop de-energization.
80-032/03L	05/03/80	06/02/80	VCT outlet valve MOV-CH-115C was found to be receiving continuous shut signal as a result of short in level control circuit. Short corrected. Remaining module wire insected ok.
80-034/03L	05/12/80	06/09/80	Half the fire nozzles in one main filter bank found plugged with rust and unidentified matorial. Nozzles and piping cleaned. Other MFB nozzles will be testod.
80-035/03L	05/12/80	06/09/80	Surveillance test identified fuel bldg internal pressure less than 1/8 in. water column relative atmos. flow director damper (friction type) had drifted shut. Damper removed.
80-036/03L	05/14/80	06/09/80	Operators noted build-up on RH-211 weld fitting. Fitting ground out and rewelded. Support methods being studied. Other RHR train had been available.
80-038/03L	05/17/80	06/16/80	Gaseous waste tank GW-TK-1A found leaking. Pressure decrease of flow 18 to 6 psig. No activity in tank. Leak was on flanges of flow orifice PT for gaseous waste surge tank.
80-040/01T	05/03/80	06/04/80	Re-review of radiographs revealed code rejectable welds on SI and Aux feed lines. Defective welds were repaired. Future radiographs to be checked by two level II examiners.

INSPECTION STATUS

ENFORCEMENT STATUS

THE LICENSEE DID NOT CONDUCT PROPER PERSONNEL SCREENING IN ACCORDANCE WITH SECURITY PLAN COMMITMENTS.
(8005 DEFICIENCY)

THE LICENSEE FAILED TO PROVIDE ADEQUATE KEY CONTROL.
(8005 DEFICIENCY)

THE LICENSEE FAILED TO PROVIDE ADEQUATE ASSESSMENT AIDS THAT CONFORM WITH APPROVED SECURITY PLAN COMMITMENTS.
(8005 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENTS

+ A leakage path continues to preclude isolation of the offgas system. Administrative guidelines have been imposed to shutdown the reactor well before reaching the technical specification effluent limits. (80-04)

FACILITY ITEMS

+ Weaknesses were identified in health physics technician and radiation worker training, personal contamination control practices, procedure coverage and adheronce, high radiation area access controls, and extendible probe survey instrument supplies. (80-04)

MANAGERIAL ITEMS

+ Weaknesses were identified in health physics professional and technical level staffing, offshift radiation protection coverage, definition of the health physics group's authority over radiological work activities, and ALARA formalization. (80-04)

PLANT STATUS

Operating routinely.

+LAST IE SITE INSPECTION DATE: March 3-14, 1980

+ INSPECTION REPORT NO: 80-04

SUMMARY

INSPECTION SUMMARY

+ Inspection on March 3-14, (80-04): Special, announced inspection of health physics program, including organization and management, training, quality assurance, procedures, internal and external exposure controls, surveys and access controls, instrumentation, ALARA, radioactive waste, facilities and equipment, and accident response capabilities. The inspection involved 350 inspector hours onsite by five NRC inspectors. Several significant weaknesses in the health physics program were identified. These weaknesses are in the areas of staffing, training, procedures, radiological controls, instrumentation, ALARA and radwaste. Two apparent items of noncompliance were found (inadequate offshift radiation protection coverage; and inadequate high radiation area access controls).

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10CFR71.5 THE LICENSEE DID NOT COMPLY WITH DOT REGULATIONS DURING A SHIPMENT OF RADIOACTIVE MATERIAL. THE DOSE RATE ON THE SIDE OF A CLOSED VEHICLE WAS MEASURED TO BE 600 MREM/HR. 49CFR173.393(J)(2) SPECIFIES A MAXIMUM DOSE RATE OF 200 MREM/HR.
(8021 VIOLATION)

+ LAST IE SITE INSPECTION DATE: MAY 1-23, 1980

+ INSPECTION REPORT NO: 50-259/80-21

SUMMARY

INSPECTION SUMMARY

+ INSPECTION APRIL 28 - MAY 1 (80-21): EACH LICENSEE-SHIPPER VEHICLE WAS INSPECTED FOR COMPLIANCE WITH DEPARTMENT OF TRANSPORTATION (DOT) AND NUCLEAR REGULATORY COMMISSION (NRC) REGULATIONS AS FOLLOWS: (1) SHIPPING PAPER REQUIREMENTS; (2) DOT PLACARDING REQUIREMENTS; (3) RADIATION LEVELS; AND (4) DOT MARKING AND LABELING REQUIREMENTS FOR PACKAGES. OF THE FOUR AREAS INSPECTED INVOLVING THIS SHIPMENT, ONE APPARENT ITEM OF NONCOMPLIANCE WAS IDENTIFIED (SEVERITY LEVEL I - RADIATION LEVELS ON SURFACE OF CLOSED EXCLUSIVE USE VEHICLE IN EXCESS OF REGULATORY LIMITS).

+ INSPECTION MAY 19-23 (80-22): INCLUDED REVIEW OF SECURITY PLAN; SECURITY ORGANIZATION; SECURITY PROGRAM AUDIT; RECORDS AND REPORTS; TESTING AND MAINTENANCE; LOCKS AND KEY CONTROL; PHYSICAL BARRIERS (PROTECTED AND VITAL AREAS); POWER SUPPLY; LIGHTING; ASSESSMENT AIDS; ACCESS CONTROLS (SEARCH, ESCORT, VITAL AREAS); DETECTION AIDS; COMMUNICATIONS. THE INSPECTION INVOLVED 27 INSPECTOR HOURS ON SITE BY TWO NRC INSPECTORS. TEN INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. OF THE 16 AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN 12 AREAS; FOUR ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN THE OTHER FOUR AREAS: (1) PHYSICAL BARRIERS - VITAL AREA BARRIER INCOMPLETE; (2) KEY AND LOCK CONTROL - INADEQUATE INSTALLATION OF LOCK; (3) ASSESSMENT AIDS - CCTV SURVEILLANCE CAPABILITY NOT REDUNDANT; (4) ACCESS CONTROL - VEHICLE ESCORT NOT EQUIPPED WITH PORTABLE RADIO.

SUMMARY

THE PLANT OPERATED NEAR FULL POWER WITH REDUCTIONS ON 06/06/80 FOR RECIRC PUMP RUN BACK, AND ON 06/14/80 FOR VALVE TESTING. SCRAMS OCCURRED ON 06/07/80 DUE TO LOAD REDUCTION AND ON 06/28/80 FOR FEEDWATER LEAKAGE. DURING THIS SCRAM ABOUT ONE THIRD OF THE CONTROL RODS DID NOT ENTER THE CORE IMMEDIATELY; THE PROBLEM WILL BE FURTHER RESEARCHED.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY THE CP&L QUALITY ASSURANCE MANUAL, THE LICENSEE IS COMMITTED TO ANSI 18.7-1972. SECTION 5.3.5(3) OF ANSI 18.7-1972 STATES THAT INSTRUCTIONS SHALL BE INCLUDED OR REFERENCED IN PROCEDURES FOR RETURNING EQUIPMENT TO ITS NORMAL OPERATING STATUS. PT 15.1, STANDBY GAS TREATMENT SYSTEM, PT15.2.1, HEPA FILTER EFFICIENCY AND PT 15.2.2 CHARCOAL LEAK TEST DID NOT HAVE INSTRUCTIONS FOR RETURNING THE EQUIPMENT TO ITS NORMAL OPERATING STATUS.
(7926 INFRACTION)

TECHNICAL SPECIFICATION 6.8.1 REQUIRES WRITTEN PROCEDURES BE FOLLOWED. SECTION 6.5.1 AND 6.5.3.2 OF THE RADIATION CONTROL AND PROTECTION MANUAL REQUIRES PERSONNEL TO WEAR LAB COATS WHEN REQUIRED. ON 7/24/79 TWO AUXILIARY OPERATORS ENTERED A CONTAMINATION AREA WITHOUT LAB COATS AS REQUIRED BY LOCAL POSTING.
(7926 INFRACTION)

SURVEILLANCE PROCEDURES NOT ESTABLISHED. PROCEDURES HAVE NOT BEEN ESTABLISHED FOR LICENSEE'S ENGINEERING AND QA/QC SURVEILLANCE ACTIVITIES RELATIVE TO INSERVICE INSPECTION. SURVEILLANCE PROCEDURES REQUIRED BY TECH SPECS.
(8023 INFRACTION)

INSERVICE INSPECTION PROGRAM INCOMPLETE. THE INSERVICE INSPECTION PROGRAM SUBMITTED TO NRC FOR REVIEW DOES NOT MEET REQUIREMENTS OF ASME B&PV CODE SECTION XI - NONCOMPLIANCE WITH 10CFR50.55 A(G).
(8023 INFRACTION)

SUMMARY

INSPECTION SUMMARY

INSPECTION MAY 12-16 (80-19): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 35 INSPECTOR-HOURS ON SITE IN THE AREAS OF MAINTENANCE, SURVEILLANCE AND CALIBRATION OF TECHNICAL SPECIFICATION RELATED EQUIPMENT AND SUPPORT EQUIPMENTS. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MAY 27-30 (80-23): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 27 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSERVICE INSPECTION (ISI) PROGRAM; MAINTENANCE AND CONTRACTOR WELDER TRAINING AND CERTIFICATION; IEB 80-07 JET PUMP BRACKET INSPECTION RESULTS (UNIT 2); SPECIAL RECIRCULATION NOZZLE INSPECTION PREPARATIONS (UNIT 1). LER 80-24 TORUS COATING BLISTERS (UNIT 2). OF THE FIVE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FOUR AREAS; TWO ITEMS OF NONCOMPLIANCE WERE FOUND IN ONE AREA (INFRACTION - INSERVICE INSPECTION PROGRAM INCOMPLETE; AND INFRACTION - SURVEILLANCE ACTIVITY PROCEDURES NOT ESTABLISHED OR IMPLEMENTED).

INSPECTION MAY 3-31 (80-24): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 35 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONTROL ROOM OBSERVATIONS, REVIEW OF OPERATOR LOGS, LIMITING CONDITIONS FOR OPERATION, TOUR OF VITAL AREAS, PHYSICAL SECURITY, RADIATION PROTECTION, HOUSEKEEPING AND CLEANLINESS, FIRE PROTECTION, REVIEW OF ACTION TAKEN ON IE BULLETINS AND REVIEW AND FOLLOWUP ON LICENSEE EVENT REPORTS. THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED 35 MANHOURS OF INSPECTION TIME ON SITE IN THE TEN AREAS IDENTIFIED ABOVE. OF THE TEN AREAS INSPECTED NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-028/03L-0	04/14/80	05/08/80	CONTAINMENT ATMOSPHERE MONITOR FAILED DOWNSCALE.
80-038/03L-0	05/01/80	05/28/80	RECIRCULATION PUMP TRIPPED ON LOW OIL PRESSURE DUE TO ERRATIC OPERATION OF PRESSURE CONTROL VALVE.
80-039/03L-0	04/17/80	05/15/80	CONTAINMENT ATMOSPHERE ANALYZER 1263 FAILED.
80-040/03L-0	04/17/80	05/08/80	NUMBER 2 DG SERVICE WATER SUPPLY VALVES FAILED TO OPEN WHEN DG WAS STARTED.
80-041/03L-0	04/17/80	05/06/80	PARTIAL LOSS OF ROD POSITION FOR CONTROL ROD NO. 14-11.
80-043/03L-0	04/22/80	05/21/80	CONTROL POWER LOST TO NO. 4 DG.
80-044/03L-0	04/22/80	05/21/80	CONTAINMENT ATMOSPHERE CONTROL MONITOR RIP VALVE X57B DID NOT CLOSE FULLY.
80-045/03L-0	04/24/80	05/19/80	REACTOR LOW WATER LEVEL SWITCHES 2 AND 3 OUT OF CALIBRATION.
80-047/03L-0	05/01/80	05/28/80	RHR FLOW INDICATOR OUT OF CALIBRATION ON REMOTE SHUTDOWN PANEL.
80-048/03L-0	05/08/80	06/05/80	LEAKING GASKET ON CAL. ADJUSTMENT RX LOW LEVEL INST. CAUSED SWITCH TO FAIL.
80-049/03L-0	05/16/80	06/03/80	CONTROL ROD 14-15 DID NOT INDICATE AT POSITION 08.
80-051/03L-0	05/15/80	06/13/80	CONTAINMENT ATMOSPHERE DILUTION TANK VOLUME BELOW THE TECHNICAL SPECIFICATION LIMIT - SECOND OCCURRENCE.
80-052/03L-0	05/14/80	06/11/80	FAILURE OF A PRIMARY CONTAINMENT OXYGEN ANALYZER.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY SECTION 3.7.2.2 OF THE TECHNICAL SPECIFICATIONS, WITH ONE OR MORE OF THE DIESEL GENERATOR SPRAY AND/OR SPRINKLER SYSTEMS INOPERABLE, ESTABLISH A CONTINUOUS FIRE WATCH WITH BACKUP FIRE SUPPRESSION EQUIPMENT WITHIN ONE HOUR. CONTRARY TO THE ABOVE, ON OCTOBER 16 THE INSPECTOR FOUND FIRE PROTECTION SPRINKLER AND STANDPIPE SYSTEMS ISOLATED TO DIESEL GENERATOR NO. 3. THE ISOLATED SYSTEMS WERE INDICATED BY LOW PRESSURE ANNUNCIATORS FOR THE SYSTEMS. A FOLLOWUP INVESTIGATION REVEALED THAT TWO DELUGE VALVES (DV-15 AND DV-17) HAD BEEN ISOLATED FOR MAINTENANCE BY MANUALLY CLOSING THREE ISOLATION VALVES. THIS ACTION WAS TAKEN WITHOUT NOTIFYING OPERATING PERSONNEL, AND HAVING THE SYSTEM PLACED IN A LIMITING CONDITION FOR OPERATION (LCO) AND TAKING COMPENSATORY MEASURES REQUIRED BY THE TECHNICAL SPECIFICATIONS. AN LCO WAS ESTABLISHED AFTER THE INSPECTOR FOUND THE CONDITION, NOTIFIED OPERATING PERSONNEL AND THEY HAD INVESTIGATED THE CAUSE OF THE ANNUNCIATOR ALARM.
(7937 INFRACTION)

SURVEILLANCE PROCEDURES NOT ESTABLISHED. PROCEDURES HAVE NOT BEEN ESTABLISHED FOR LICENSEE'S ENGINEERING AND QA/QC SURVEILLANCE ACTIVITIES RELATIVE TO INSERVICE INSPECTION. SURVEILLANCE PROCEDURES REQUIRED BY TECH SPECS.
(8020 INFRACTION)

INSERVICE INSPECTION PROGRAM INCOMPLETE. THE INSERVICE INSPECTION PROGRAM SUBMITTED TO NRC FOR REVIEW DOES NOT MEET REQUIREMENTS OF ASME B&PV CODE SECTION XI - NONCOMPLIANCE WITH 10CFR50.55 A(G).
(8020 INFRACTION)

- LAST IE SITE INSPECTION DATE: 6/30/80
- INSPECTION REPORT NO: 50-317/80-10

SUMMARY

INSPECTION SUMMARY

- 50-317/80-05 - Apr 7-30: Routine, onsite regular and back-shift inspection by the resident inspector (20 hours). Areas inspected included the control room and the accessible portions of the auxiliary, turbine, service, and intake buildings; radiation protection; physical security; fire protection; plant operating records; spent fuel shipment, loss of coolant accident procedure and associated training review, and reporting to the NRC. No items of noncompliance were identified.
- 50-317/80-07 - Apr 29 - May 1: Unannounced investigation by one regional based investigator (16 hours) of allegations relating to the pipe support activities performed to comply with NRC Bulletin 79-02 and radiation safety procedures. Portions of the allegations were investigated through several telephone contacts with licensee and contractor representatives. Findings in these areas were substantiated by documentation obtained at the site by the Senior Resident Inspector. None of the allegations were substantiated. No items of noncompliance were identified.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-024/03L	04/30/80	05/30/80	Cracked weld discovered on 11B RCP controlled bleed off line apparent cause was vibration fatigue, thermal cycles and/or brittleness during welding eng eval to be performed.
80-026/01T	05/20/80	06/03/80	Aux feed decay heat removal shifted to main feed after trip due service water loss and later restoring of service water, aux feed suctions were isolated due operator error.
80-027/01T	05/20/80	06/03/80	Manual trip when both service water systems common suction header air-bound, necessitating decay heat removal by aux feed until service water supply restored to main feed
80-028/03L	05/15/80	06/13/80	Diesel generator No. 12 failed to reach rated speed within 10 seconds. Investigation revealed intermittent female contact pin on amphenol connector, 250 rpm low speed switch.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TS 6.8.1 D AND REGULATORY GUIDE 1.33, OI-17C WAS NOT APPROPRIATE. IN THAT PERFORMANCE OF THE STEPS IN ORDER WOULD HAVE RESULTED IN OPENING DEBORATION ION EXCHANGER 21 ISOLATION BY OPENING THE VENT BEFORE SHUTTING THE LETDOWN STRAINER ISOLATION VALVES. CAUSING AN UNPLANNED RELEASE OF RADIOACTIVITY
(8002 INFRACTION)

CONTRARY TO TS 6.8.1.A AND OI-17C, ON FEBRUARY 11, 1980, REQUIRED 2 VALVE ISOLATION OF DEBORATING ION EXCHANGER 21 WAS NOT ACCOMPLAINED AND THE SINGLE, UNSPECIFIED VALVE USED FOR ISOLATION WAS NOT SHUT BECAUSE OF ENTANGLED WIRE (DUE TO FAULTY HOUSEKEEPING, COMBINED WITH DEFECTIVE POSITION INDICATION, CAUSING A RADIATION RELEASE TO THE ENVIRONS.
(8002 INFRACTION)

CONTRARY TO TS 6.8.1.A AND OI-17C, ON FEBRUARY 12, 1980, WHEN DEBORATING ION EXCHANGER 21 WAS BEING RESTORED TO SERVICE. ITS VENT WAS NOT FULLY SHUT BEFORE OPENING OF VALVES EFFECTING ISOLATION RESULTED IN AN UNPLANNED RELEASE OF RADIOACTIVITY.
(8002 INFRACTION)

CONTRARY TO TS 6.8.1.E AND SEPIP A, AN UNPLANNED RELEASE ON FEBRUARY 11, 1980 RESULTED IN A PLANT EMERGENCY BEING DECLARED WITHOUT FOLLOWUP NOTIFICATION BEING MADE TO THE NRC.
(8002 INFRACTION)

CONTRARY TO TS 6.8.1.E AND SEPIP A, NO ESTIMATE OF OFFSITE DOSE WAS MADE ON FEBRUARY 11, 1980 WHEN A PLANT EMERGENCY INVOLVING A RELEASE TO THE ENVIRONS OCCURRED.
(8002 INFRACTION)

CONTRARY TO TS 6.8.1.E AND SEPIP A, RE-ENTRY INTO THE EVACUATED AUXILIARY BUILDING WAS MADE WITHOUT THE REQUIRED BRIEFING ON THE HAZARDS INVOLVED.
(8002 INFRACTION)

PLANT STATUS:

No significant new information.

* LAST IE SITE INSPECTION DATE: 6/30/80

* INSPECTION REPORT NO: 50-318/80-09

SUMMARY

INSPECTION SUMMARY

* 50-318/80-05 - Apr 7-30: Routine, onsite regular and backshift inspection by the resident inspector (20 hours). Areas inspected included the control room and the accessible portions of the auxiliary, turbine, service, and intake buildings; radiation protection; physical security; fire protection; plant operating records; spent fuel shipment, loss of coolant accident procedure and associated training review, and reporting to the NRC. No items of noncompliance were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50, APPENDIX B, CRITERION II ESTABLISHED THE REQUIREMENT FOR ADEQUATE CLEANLINESS CONTROL OVER ACTIVITIES AFFECTING THE QUALITY OF IDENTIFIED STRUCTURES, SYSTEMS AND COMPONENTS. PMI 2090 REQUIRES PERIODIC CLEANLINESS INSPECTIONS OF THE PLANT. CONTRARY TO THE ABOVE, THE IN-PLANT GENERAL SAFETY COMMITTEE HAD NOT CONDUCTED QUARTERLY CLEANLINESS INSPECTIONS AS REQUIRED.
(8001 DEFICIENCY)

10 CFR 50, APPENDIX B, CRITERION II STATES THAT THE APPLICANT SHALL IDENTIFY THE STRUCTURES SYSTEMS, AND COMPONENTS TO BE COVERED BY THE QUALITY ASSURANCE PROGRAM. FSAR SECTION 1.7.19.2 STATES THAT AN "N" LIST OF CLASS I COMPONENTS HAS BEEN DEVELOPED AND IS MAINTAINED BY AEPSC. CONTRARY TO THE ABOVE, THE INSPECTOR FOUND THAT THE "N" LIST HAD NOT BEEN MAINTAINED AS REQUIRED. THE "N" LIST CURRENTLY IN USE IS IN DRAFT FORM AND HAD NOT BEEN APPROVED.
(8001 DEFICIENCY)

10 CFR 50, APPENDIX B, CRITERION XI REQUIRES THAT A TEST PROGRAM SHALL BE ESTABLISHED TO ASSURE THAT ALL TESTING REQUIREMENTS TO DEMONSTRATE THAT STRUCTURES, SYSTEMS AND COMPONENTS WILL PERFORM SATISFACTORILY IN SERVICE. PMI 4030 REQUIRES THAT WHEN CHANGES TO THE TECHNICAL SPECIFICATIONS ARE MADE, THE MASTER SURVEILLANCE TEST TABLE SHALL BE REVIEWED AND REVISED AS NECESSARY. CONTRARY TO THE ABOVE, THE INSPECTOR FOUND THAT AN UP-TO-DATE MASTER SURVEILLANCE SCHEDULE WAS NOT BEING MAINTAINED.
(8001 DEFICIENCY)

10 CFR 50, APPENDIX B, CRITERION XIV REQUIRES THAT PROCEDURES SHALL BE PROVIDED FOR CONTROL OF EQUIPMENT, AS NECESSARY, TO MAINTAIN PERSONNEL AND REACTOR SAFETY AND TO AVOID UNAUTHORIZED OPERATION OF EQUIPMENT. PMI 2140 REQUIRES THAT LIFTED LEADS SHALL BE TAGGED TO IDENTIFY THEM FOR RETERMINATION. CONTRARY TO THE ABOVE, THE INSPECTOR FOUND THAT LEADS OF THE INSTRUMENT AND CONTROL CABLES FOR THE HOT SHUTDOWN PANEL WERE NOT BEING CONTROLLED AS REQUIRED.
(8001 INFRACTION)

10 CFR 50, APPENDIX B, CRITERION XVIII STATES THAT A COMPREHENSIVE SYSTEM OF PLANNED AND PERIODIC AUDITS SHALL BE CARRIED OUT TO VERIFY COMPLIANCE WITH ALL ASPECTS OF THE QUALITY ASSURANCE PROGRAM AND TO DETERMINE THE EFFECTIVENESS OF THE PROGRAM. CONTRARY TO THE ABOVE, THE INSPECTOR FOUND THAT A COMPREHENSIVE SYSTEM OF AUDITS FOR SAFETY RELATED ACTIVITIES AT THE CORPORATE OFFICE HAD NOT BEEN ADDRESSED IN THE AEPSC QUALITY ASSURANCE PROGRAM AND THAT FORMAL AUDITS OF CORPORATE OFFICE ACTIVITIES HAD NOT BEEN IMPLEMENTED.
(8001 INFRACTION)

10 CFR 50, APPENDIX B, CRITERION V STATES THAT ACTIVITIES EFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS AND PROCEDURES AND SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THESE INSTRUCTIONS AND PROCEDURES. PMI 7020 REQUIRES THAT IF CORRECTIVE ACTION IS REQUIRED AS PART OF AN AUDIT REPORT, ACTION SHALL BE TAKEN WITHIN 30 DAYS. CONTRARY TO THE ABOVE, CORRECTIVE ACTION FOR AUDIT REPORTS QA 78-12, 78-19 AND 78-21 WAS NOT TAKEN IN THE REQUIRED 30 DAY PERIOD.
(8001 INFRACTION)

TECHNICAL SPECIFICATION 6.8.1 REQUIRES IMPLEMENTATION OF PROCEDURES. 12-OHP-4021.018.004 "DRAINING OR ADJUSTING LEVEL IN THE SPENT FUEL PIT" DETAILS THE PROCEDURE FOR RAISING LEVEL IN THE SFP. CONTRARY TO THE ABOVE, THIS PROCEDURE WAS NOT USED FOR INCREASING LEVEL IN THE SFP BETWEEN MARCH 15, 1980 AND MARCH 17, 1980, WHEN THE POOL WAS OVERFILLED AND CROSS-CONTAMINATION OF THE DEMINERALIZED WATER SYSTEM OCCURRED.
(8004 INFRACTION)

AMENDMENT NUMBER 32 TO NRC OPERATING LICENSE NUMBER DPR-58 AND AMENDMENT NUMBER 13 TO DPR-74 REQUIRE A MINIMUM OF 2000 PPM BORON CONCENTRATION IN THE SPENT FUEL PIT DURING CHANGEOUT FROM OLD RACKS TO NEW HIGH DENSITY FUEL STORAGE RACKS. CONTRARY TO THE ABOVE, ON MARCH 17, 1980, THE SFP CONCENTRATION WAS FOUND TO BE LESS THAN 2000 PPM (1954 PPM).
(8004 INFRACTION)

AS REQUIRED BY 10 CFR 71.5, SHIPMENTS OF LICENSED RADIOACTIVE MATERIAL MUST COMPLY WITH THE REQUIREMENTS OF THE DEPARTMENT OF TRANSPORTATION, 49 CFR 170-189, WHICH REQUIRES PLACARDING OF EACH END AND SIDE OF EXCLUSIVE USE VEHICLES TRANSPORTING LSA MATERIAL. (PARAGRAPH 49 CFR 172.504, 172.506, AND 173.392(C)(7)). CONTRARY TO THE ABOVE, ON FEBRUARY 29, 1980, THREE EXCLUSIVE USE TRUCKS CARRYING LARGE BOXES OF LSA MATERIAL FROM THE D. C. COOK SITE TO THE NUCLEAR ENGINEERING COMPANY, BEATTY, NEVADA, WERE FOUND UPON ARRIVAL TO BE MISSING THE FRONT PLACARD.
(8009 DEFICIENCY)

*LAST IE SITE INSPECTION DATE: February 29, 1980

- INSPECTION REPORT NO: 80-09

SUMMARY

INSPECTION SUMMARY

- Meeting on April 15, (80-07): This special management meeting was held to discuss NRC concerns in two areas: implementation of the American Electric Company Corporate Quality Assurance Program; and the D. C. Cook Plant regulatory performance in the areas of personnel error and adherence to procedure. No items of noncompliance were identified as a result of this meeting.
- Inspection on February 29, (80-09): As a part of the inspection conducted during February 25 through March 7, 1980, at Beatty, Nevada, this report details the inspection of trailers No. 232214, No. 331143, and No. 331011, all from D. C. Cook. The shipments consisted of large wooden boxes on an open flatbed trailer. Three apparent items of noncompliance (incomplete placarding) with DOT/NRC regulations were observed.

LAST IE SITE INSPECTION DATE: MAY 5-30, 1980

INSPECTION REPORT NO: 50-302/80-23

SUMMARY

INSPECTION SUMMARY

INSPECTION MAY 5-30 (80-23): THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR OF PLANT OPERATIONS, SECURITY, AND RADIOLOGICAL CONTROLS, LICENSEE EVENT REPORTS (LER'S), LICENSEE ACTION ON IE INFORMATION NOTICES, NONROUTINE EVENTS, SURVEILLANCES TESTS, AND TOUR OF PLANT AREAS. THE INSPECTORS ALSO OBSERVED THE LICENSEE'S EMERGENCY PLAN DRILL CONDUCTED ON MAY 29, OBSERVED PLANT OPERATIONS ON THE BACK SHIFT, AND ATTENDED A MEETING WITH NRR PERSONNEL ON MAY 19. THE INSPECTION INVOLVED 129.5 HOURS ON SITE BY TWO RESIDENT INSPECTORS. TWO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED (INFRACTION - FAILURE OF SECURITY GUARDS TO EITHER SEARCH PERSONNEL OR REQUIRE PERSONNEL TO RE-ENTER THE WEAPONS DETECTOR AFTER THE DEVICE HAD ALARMED; INFRACTION - FAILURE OF PERSONNEL TO SELF-FRISK PRIOR TO EXITING THE RCA).

INSPECTION STATUS

ENFORCEMENT STATUS

THE LICENSEE FAILED TO ADEQUATELY SEARCH SOME INDIVIDUALS PRIOR TO THEIR ENTRY INTO THE PROTECTED AREA.
(8013 INFRACTION)

THE LICENSEE FAILED TO PROPERLY ESCORT SEVERAL INDIVIDUALS.
(8013 INFRACTION)

A VITAL AREA DOOR WAS FOUND UNSECURED AND UNATTENDED AND SEVERAL WATCHMEN WERE NOT PROVIDED WITH ADEQUATE COMMUNICATION.
(8013 INFRACTION)

THE LICENSEE DID NOT CONDUCT PROPER PERSONNEL SCREENING IN ACCORDANCE WITH SECURITY PLAN COMMITMENTS.
(8013 INFRACTION)

THE LICENSEE FAILED TO PERFORM A REQUIRED TEST ON AN ALARM SYSTEM.
(8013 DEFICIENCY)

TECHNICAL SPECIFICATION 3.3.3.8 REQUIRES THE FIRE DETECTION INSTRUMENTATION TO BE OPERABLE AT ALL TIMES, OR TO ESTABLISH WITHIN ONE HOUR A FIRE WATCH PATROL. CONTRARY TO THE ABOVE, ON APRIL 7, 1980, POWER WAS LOST TO THE FIRE DETECTION INSTRUMENTATION AT 1400 HOURS AND A FIRE WATCH PATROL WAS NOT ESTABLISHED UNTIL APPROXIMATELY 1700 HOURS.
(8014 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS

+ The refueling/maintenance outage continued during the month. In reference to the broken fuel assembly holddown spring problem discovered May 1980, the licensee has initiated a spring replacement program. Forty-four springs have been replaced to date. The current outage is expected to last until the later part of July 1980.

+LAST IE SITE INSPECTION DATE: May 12-16, 19-23, 28-30; June 2-6 and 9-10, 1980

+ INSPECTION REPORT NO: 80-15

SUMMARY

INSPECTION SUMMARY

+ Inspection on December 18-19, (79-34): Nonroutine, announced inspection of licensee actions taken in response to IE Bulletin 79-19, "Packaging of Low-Level Radioactive Waste for Transport and Burial." The inspection involved 14 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

+ Inspection on April 10-11, 21-22; May 6-7 and June 4, (80-11): Quality Assurance/Quality Control program, implementing procedures, observation of work activities and review and evaluate nondestructive examinations (NDE) data and reports of inservice inspection (ISI); IE Bulletin 79-13 and IE Bulletin 79-17 activities. The inspection involved 22 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

+ Inspection on April 8-11, 15-25, 29-30; May 1-2, and 5-9, (80-14): Routine unannounced inspection of long term shutdown, IE Bulletin followup, special inspection of the April 19, 1980 loss of decay heat removal system and instrument power; Part 21, Report and License Event Report. The inspection involved 319.5 inspector hours onsite by three NRC inspectors. Of the five areas inspected, no items of noncompliance or deviations were found in four areas; one item of apparent noncompliance was identified in the other area (failure to establish a fire watch patrol).

+ Inspection on May 12-16, 19-23, 26-30; June 2-6 and 9-10, (80-15): Routine unannounced inspection of followup on previous inspection findings, long term shutdown, IE Circular followup and licensee event report. The inspection involved 129 inspector hours onsite during regular shift and 29 inspector hours during offshifts by the resident inspector. Of the four areas inspected, no items of noncompliance or deviations were found in three areas; one item of apparent noncompliance was identified in the other area (failure to notify the NRC Operations Center as required by 10 CFR 50.72).

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-37/ 03L-0	04/18/80	05/16/80	Steam generator level transmitter out of calibration.
80-39/ 03L-0	04/23/80	05/21/80	Weekly test late by 6 hours and 10 minutes.
80-40/ 03L-0	05/14/80	05/23/80	Holddown spring on fuel assembly found to be damaged.
80-41/ 03L-0	05/11/80	06/05/80	Source range channel out of tolerance and declared inoperable.
80-42/ 03L-0	05/10/80	06/06/80	Combined leakage for all penetrations exceeded allowable leakage.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 20.201(3) REQUIRES THAT EACH LICENSEE SHALL MAKE OR CAUSE TO BE MADE SUCH SURVEYS AS MAY BE NECESSARY TO COMPLY WITH THE REGULATIONS IN PART 20. CONTRARY TO THIS REQUIREMENT, NO TIMELY SURVEY (EVALUATION) WAS MADE UPSTREAM OF THE COMPOSITE SAMPLER IN THE DISCHARGE CANAL ON APRIL 5, 1980, AFTER AN UNPLANNED LIQUID RELEASE FROM UNIT 1, TO ENSURE COMPLIANCE WITH 10 CFR 20.106(A).
(8008 INFRACTION)

TECHNICAL SPECIFICATION 3.8.C.2 STATES, IN PART, THAT CONCENTRATIONS OF GROSS BETA ACTIVITY IN THE CONDENSER COOLING WATER DISCHARGE CANAL SHALL NOT EXCEED 1E-7 MICROCURIES PER MILLILITER UNLESS THE DISCHARGE IS CONTROLLED IN ACCORDANCE WITH 10 CFR 20 LIMITS. CONTRARY TO THIS REQUIREMENT, AS THE RESULT OF AN UNCONTROLLED RELEASE, CONCENTRATIONS OF 1.8E-6 AND 3.7E-6 MICROCURIES PER MILLILITER OF GROSS BETA ACTIVITY EXISTED IN THE DISCHARGE CANAL ON APRIL 5 AND 6, 1980.
(8008 INFRACTION)

10 CFR 50, APPENDIX B, CRITERION II REQUIRES ACTIVITIES AFFECTING QUALITY BE ACCOMPLISHED UNDER SUITABLY CONTROLLED CONDITIONS, INCLUDING ADEQUATE CLEANNESS. THE LICENSEE'S QUALITY ASSURANCE PROGRAM, SECTION 2.2 REQUIRES THAT THE LICENSEE ADHERE TO ALL MANDATORY REQUIREMENTS OF ANSI N18.7. ANSI N18.7-1976, SECTION 5.2.10 REQUIRES QUALITY HOUSEKEEPING PRACTICES ENCOMPASSING ALL ACTIVITIES RELATED TO CONTROL OF FIRE PREVENTION AND PROTECTION, INCLUDING DISPOSAL OF COMBUSTIBLE MATERIAL AND DEBRIS. CONTRARY TO THE ABOVE, ON APRIL 17, 1980, DURING A ROUTINE TOUR OF THE UNIT 1 SPHERE, THE NRC INSPECTOR OBSERVED NUMEROUS OILY RAGS/PAPERS, A TIPPED OVER LUBE OIL CAN, AND SCATTERED DEBRIS ABOVE THE ELEVATOR SHAFT WHICH WERE NOT BEING CONTROLLED AND WHICH REPRESENTED A FIRE HAZARD.
(8009 INFRACTION)

UNIT 1 TECHNICAL SPECIFICATIONS, SECTION 6.2.B REQUIRES THAT RADIATION CONTROL PROCEDURES BE MAINTAINED, MADE AVAILABLE TO ALL STATION PERSONNEL, AND ADHERED TO. RADIATION CONTROL STANDARDS PROCEDURE 37-1-E-3, "WORK IN CONTROLLED AREAS (RADIATION AREAS AND HIGH RADIATION AREAS)," REQUIRES THAT PERSONNEL NOT EAT, DRINK, SMOKE, OR CHEW IN THOSE CONTROLLED AREAS. CONTRARY TO THE ABOVE, ON APRIL 17, 1980, WHILE MAKING A ROUTINE TOUR OF THE UNIT 1 TURBINE BUILDING (A POSTED RADIATION AREA), THE NRC INSPECTOR OBSERVED EVIDENCE OF EATING, DRINKING, AND SMOKING (I.E., THE PRESENCE OF NUMEROUS CIGARETTE BUTTS, EMPTY SOFT DRINK CANS, EMPTY CANDY WRAPPERS, AND A HALF EATEN HAMBURGER) IN THIS RADIATION AREA. THIS IS A REPETITIVE ITEM OF NONCOMPLIANCE SINCE THE SAME PROBLEM WAS IDENTIFIED TWICE PREVIOUSLY IN NRC INSPECTION REPORTS NO. 50-010/79-19, DATED OCTOBER 18, 1979, AND NO. 50-010/79-25, DATED JANUARY 28, 1980.
(8009 INFRACTION)

UNIT 1 TECHNICAL SPECIFICATIONS, SECTION 6.2.B REQUIRES THAT RADIATION CONTROL PROCEDURES BE MAINTAINED, MADE AVAILABLE TO ALL STATION PERSONNEL, AND ADHERED TO. RADIATION CONTROL STANDARDS PROCEDURE 37-1-A-1 REQUIRES THAT CONTAMINATED CLOTHING SHOULD BE REMOVED FROM CONTROLLED CONTAMINATED AREAS WHEN NOT IN USE AND, FURTHER, REQUIRES THAT CLOTHING HAMPERS MARKED "DEPOSIT CONTAMINATED RUBBER GOODS HERE" AND "DEPOSIT CONTAMINATED CANVAS GOODS HERE" BE PLACED AT THE EXITS FROM ALL AREAS WHERE PROTECTIVE CLOTHING IS REQUIRED. CONTRARY TO THE ABOVE, ON APRIL 17, 1980, DURING A ROUTINE TOUR OF THE UNIT 1 TURBINE BUILDING, THE NRC INSPECTOR OBSERVED CONTAMINATED CLOTHING LYING INSIDE A CONTROLLED AREA (UNIT 1 CONDENSATE DEMINERALIZER CONTROL AREA) AND THAT NO CLOTHING HAMPERS WERE LOCATED AT THE EXIT OF THIS AREA. THIS CONDITION WAS DETERMINED TO HAVE EXISTED FOR A PERIOD OF TWO WEEKS.
(8009 INFRACTION)

SUMMARY

INSPECTION SUMMARY

Inspection on May 5-29, (80-10): Routine, resident inspection of licensee action on previous inspection findings, operational safety verification, licensee event reports, plant trips, inspection during long term shutdown, and outstanding inspection items. The inspection involved 97 inspector hours onsite by one NRC inspector. Of the six areas inspected, there were no items of noncompliance identified in five areas. There was one item of noncompliance (failure to properly report prompt reportable events in accordance with Technical Specifications) identified in one area.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50, APPENDIX B, CRITERIA XIII, STATES, IN PART, "MEASURES SHALL BE ESTABLISHED TO CONTROL THE...STORAGE...AND PRESERVATION OF MATERIAL AND EQUIPMENT IN ACCORDANCE WITH WORK AND INSPECTION INSTRUCTIONS." QAD 1313.1 STATES, IN PART, "SPECIAL COVERINGS, EQUIPMENT AND PROTECTIVE ENVIRONMENTS...SHALL BE SPECIFIED, PROVIDED, AND THEIR USE VERIFIED WHERE NECESSARY." CONTRARY TO THE ABOVE, ON DECEMBER 11, 1979, THE INSPECTOR OBSERVED THAT THE RECIRCULATION SYSTEM SWITCHGEAR AND ASSOCIATED BREAKERS MARKED FOR LEVEL B STORAGE WERE NOT BEING STORED IN ACCORDANCE WITH APPROVED PROCEDURES. THE INSPECTOR DETERMINED THAT THE CONDITION HAD EXISTED FOR APPROXIMATELY FOUR AND ONE HALF WEEKS.

SUMMARY

INSPECTION SUMMARY

+ INSPECTION MAY 27 (80-11): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 6 INSPECTOR-HOURS ON SITE IN THE AREAS OF OBSERVING A MAJOR RADIATION EMERGENCY EXCERCISE. OF THE ONE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 28 - MAY 30 (80-13): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 110 INSPECTOR-HOURS ON SITE IN THE AREAS OF UNIT NO. 2 HOT FUNCTIONAL TESTING, UNIT NO. 2 PREOPERATIONAL TESTING, UNIT 2 PLANT TESTING STATUS, UNIT 2 PLANT TOUR, UNIT 1 PLANT OPERATION, UNIT 2 STRUCTURAL INTEGRITY TEST, ESF SYSTEM VERIFICATIONS, AND SITE EMERGENCY DRILL. OF THE 8 AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

PLANT STATUS:

- Fuel handling and refueling operations have been completed. Torus modifications are essentially complete. Local leak rate testing and fire protection modifications are in progress. The refueling outage is expected to be completed by [illegible]
- LAST IE SITE INSPECTION DATE: 6/27/80
- INSPECTION REPORT NO: 50-333/80-11

SUMMARY

INSPECTION SUMMARY

- 50-333/80-08 - May 19-23: Routine, unannounced inspection by three regional based inspectors (96 hours) of new fuel receipt, handling and inspection; refueling activities in the control room and on the fuel floor; surveillance testing related to refueling Technical Specifications; and, major maintenance work on MSIV's, emergency diesel generator, and removal of the reactor vessel head. No items of noncompliance were identified.
- 50-333/80-10 - May 14: Routine, announced inspection by one regional inspector (8 hours) of licensee RHR system components as identified in the May 1980 document entitled "Response to NRC IE Bulletin 79-01B for James A. FitzPatrick Nuclear Power Plant." No items of noncompliance were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TECH SPEC 7.4 WHICH REQUIRES THAT WRITTEN PROCEDURES BE ESTABLISHED, IMPLEMENTED, AND MAINTAINED AND ADM-29, ADMINISTRATIVE PROCEDURE FOR CONTROL OF IGNITION SOURCES DURING MAINTENANCE, A FIRE WATCH WAS NOT PERFORMING HIS SOLE DUTY OF WATCHING FOR SPARKS DURING WELDING OPERATIONS AND A FIRE EXTINGUISHER WAS NOT "AT THE SITE" OF WELDING OPERATIONS.
(8010 INFRACTION)

TECH SPEC 7.4 REQUIRES THAT CHANGES TO PROCEDURES BE REVIEWED AND APPROVED. CONTRARY TO THIS REQUIREMENT, SURVEILLANCE PROCEDURES SR5.1.3-R AND SK5.2.20B-M WERE CHANGED AND THE NECESSARY REVIEWS AND APPROVALS WERE NOT DONE.
(8010 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

Areas related to potential equipment modification, which are under review and discussion with the NRC include: helium circulator auxiliaries; accident analysis relating to outlet temperature dispersion and orifice settings; hangers for 2" and smaller piping; and plant oscillations.

FACILITY ITEMS (PLANS AND PROCEDURES):

IMPLEMENTATION OF 10 CFR 73.55 PROVISIONS WERE IN EFFECT 3/21/80.

MANAGERIAL ITEMS:

PLANT STATUS:

PLANT IS OPERATING AT 53% POWER. +

LAST IE SITE INSPECTION DATE: MAY 1 - 31, 1980 +

INSPECTION REPORT NO: 50-267/80-10 +

SUMMARY

INSPECTION SUMMARY

+ INSPECTION ON MAY 27-28, 1980 (80-11): ROUTINE, UNANNOUNCED INSPECTION RELATED TO THE LICENSEE'S PROGRAM AND ACTIVITIES DESIGNED TO PROTECT AGAINST INDUSTRIAL SABOTAGE AND TO SAFEGUARD SPECIAL NUCLEAR MATERIAL. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION ON MAY 1-31, 1980 (80-10): ROUTINE, ANNOUNCED INSPECTION OF REVIEW OF SURVEILLANCE TESTING AND CALIBRATION CONTROL PROGRAM; REVIEW OF PLANT OPERATIONS; REVIEW OF EVENT REPORTS; FOLLOW-UP ON INSPECTOR IDENTIFIED AND UNRESOLVED ITEMS; SURVEILLANCE; MAINTENANCE; OPERATIONAL SAFETY VERIFICATION; AND REVIEW OF BULLETINS. WITHIN THE EIGHT (8) AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SIX AREAS. TWO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED (INFRACTION - FAILURE TO MEET FIRE WATCH AND EXTINGUISHER REQUIREMENTS, AND INFRACTION - FAILURE TO OBTAIN APPROVAL FOR CHANGES MADE TO PROCEDURES, IN TWO AREAS.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TS 2.4.3, "SPECIFICATION FOR GASEOUS WASTE EFFLUENTS," ON 5/4/80, AT ABOUT 7:55 A.M. & 9:00 A.M., THE RELEASE RATE LIMIT OF NOBLE GASES EXCEEDED THE TS LIMIT BY A FACTOR OF 1.66 & 2.78, RESPECTIVELY, FOR A PERIOD OF 4 MINUTES EACH.
(8809 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

- FACILITY ITEMS (PLANS AND PROCEDURES):
- The facility is currently in a normal refueling outage which is scheduled to be completed on July 13, 1980.

PLANT STATUS:

- Shutdown for refueling since May 3, 1980.
- LAST IE SITE INSPECTION DATE: 6/23/80
- INSPECTION REPORT NO: 50-213/80-12

SUMMARY

INSPECTION SUMMARY

- 50-213/80-04 - Mar 18-21: Routine, unannounced inspection by one regional based inspector (20 hours) of emergency procedure conformance to Westinghouse Small Break Loss of Coolant Operator Guidelines and status of licensee investigation concerning contamination discovered on plant property outside the radiologically controlled area. No items of noncompliance were identified.
- 50-213/80-08 - Apr 21-25: Routine, unannounced inspection by two regional based inspectors (59 hours) on previous inspection findings; administrative controls for facility procedures; conformance to Technical Specifications; temporary and permanent changes in conformance to Technical Specifications and licensee procedures; changes in procedures to 10 CFR 50.59(a) and (b) requirements; checklists and related forms for currency to latest changes; administrative controls for safety-related maintenance; safety-related maintenance activities; maintenance personnel qualifications; and control room and facility tours. Five items of noncompliance were identified: failure to properly approve procedures and failure to conduct PORC meetings with a quorum; failure to establish written procedures for annunciators modifications; failure to use procedures and to perform post maintenance inspections and tests for safety-related maintenance; failure to use latest revision of a procedure and failure to post procedure revisions; and, failure to maintain records of maintenance activities.
- 50-213/80-09 - May 4-5: Special, announced inspection by one regional based inspecter (8 hours) to follow up site noble gas releases, which occurred on May 4, 1980, specifically in the areas of notifications; Emergency Plan implementation; and Technical Specification release rate limits. One item of noncompliance: failure to adhere to Technical Specification limits regarding noble gas release rates.
- 50-213/80-10 - May 19-23: Physical Security Inspection by one regional based inspector (34 hours) of: Security Plan; Security Organization; Physical Barriers (Protected Area); Physical Barriers (Vital Area); Lighting; Access Control (Identification, Authorization, Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Area); Detection Aids; Alarm Stations; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys and Combinations; and Records and Reports. Also a followup on previously identified items of noncompliance. No items of noncompliance were identified.

PLANT SHUTDOWN AT END OF MONTH DUE TO HPCI PROBLEMS.

◆ LAST IE SITE INSPECTION DATE: JUNE 5-6, 1980

◆ INSPECTION REPORT NO: 50-321/80-23

SUMMARY

INSPECTION SUMMARY

◆ INSPECTION MARCH 19 AND APRIL 29-30 (80-14): THIS WAS A SPECIAL INSPECTION OF A RADIOACTIVE WASTE SHIPMENT FROM PLANT HATCH TO THE CHEM-NUCLEAR DISPOSAL SITE NEAR BARNWELL, SOUTH CAROLINA. THE INSPECTION WAS CONDUCTED ON MARCH 19, 1980 AT THE DISPOSAL SITE AND ON APRIL 29 AND 30, 1980 AT THE HATCH SITE NEAR BAXLEY, GEORGIA. A ROUTINE INSPECTION WAS CONDUCTED ON MARCH 19, 1980 OF LICENSEE-SHIPPERS FOR COMPLIANCE WITH DEPARTMENT OF TRANSPORTATION (DOT) AND NUCLEAR REGULATORY COMMISSION (NRC) REGULATIONS FOR SHIPPING PAPER REQUIREMENTS, DOT PLACARDING REQUIREMENTS, RADIATION LEVELS, REMOVABLE CONTAMINATION, MARKING AND LABELING OF PACKAGES AND PROHIBITED ARTICLES OR CONTENTS. A SPECIAL INSPECTION WAS CONDUCTED ON APRIL 28-30, 1980 AT THE HATCH SITE IN THE AREAS OF RADIOACTIVE WASTE SHIPPING PROCEDURES, SHIPPING DOCUMENTS, SHIPPING SURVEYS, TECHNICIAN QUALIFICATIONS AND TRAINING, AND PORTABLE INSTRUMENTATION CALIBRATION. DETAILS I ADDRESSES INSPECTION ACTIVITIES AT THE WASTE DISPOSAL SITE. DETAILS II ADDRESSES INSPECTION ACTIVITIES AS THE HATCH SITE.

INSPECTION JUNE 5-6 (80-23): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 5 INSPECTOR-HOURS ON SITE IN THE AREA OF SAFETY-RELATED MECHANICAL SNUBBERS. OF THE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

+ LAST IE SITE INSPECTION DATE: JUNE 5-6, 1980

+ INSPECTION REPORT NO: 50-366/80-23

SUMMARY

INSPECTION SUMMARY

+ INSPECTION MARCH 19 AND APRIL 29-30 (80-14): THIS WAS A SPECIAL INSPECTION OF A RADIOACTIVE WASTE SHIPMENT FROM PLANT HATCH TO THE CHEM-NUCLEAR DISPOSAL SITE NEAR BARNWELL, SOUTH CAROLINA. THE INSPECTION WAS CONDUCTED ON MARCH 19, 1980 AT THE DISPOSAL SITE AND ON APRIL 29 AND 30, 1980 AT THE HATCH SITE NEAR BAXLEY, GEORGIA. A ROUTINE INSPECTION WAS CONDUCTED ON MARCH 19, 1980 OF LICENSEE-SHIPPERS FOR COMPLIANCE WITH DEPARTMENT OF TRANSPORTATION (DOT) AND NUCLEAR REGULATORY COMMISSION (NRC) REGULATIONS FOR SHIPPING PAPER REQUIREMENTS, DOT PLACARDING REQUIREMENTS, RADIATION LEVELS, REMOVABLE CONTAMINATION, MARKING AND LABELING OF PACKAGES AND PROHIBITED ARTICLES OR CONTENTS. A SPECIAL INSPECTION WAS CONDUCTED ON APRIL 20-30, 1980 AT THE HATCH SITE IN THE AREAS OF RADIOACTIVE WASTE SHIPPING PROCEDURES, SHIPPING DOCUMENTS, SHIPPING SURVEYS, TECHNICIAN QUALIFICATIONS AND TRAINING, AND PORTABLE INSTRUMENTATION CALIBRATION. DETAILS I ADDRESSES INSPECTION ACTIVITIES AT THE WASTE DISPOSAL SITE. DETAILS II ADDRESSES INSPECTION ACTIVITIES AS THE HATCH SITE.

- INSPECTION JUNE 5-6 (80-23): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 5 INSPECTOR-HOURS ON SITE IN THE AREA OF SAFETY-RELATED MECHANICAL SNUBBERS. OF THE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

LICENSE STATUS

The unit produced electricity to the expiration date (October 31, 1974) of delay granted by the AEC for installation of an ECCS system. The ECCS system was not subsequently installed and the unit was defueled on January 30, 1976.

On February 11, 1980, the NRC requested the utility to show cause as to why the operating authority of the license should not be revoked and why the licensee should not submit a plan within 120 days of this order to decommission the unit.

On June 19, 1980, an order was issued by the NRC to revoke the operating authority for Indian Point Station, Unit 1, as an electrical generating facility. Consolidated Edison Company of New York, Inc. is to submit a decommissioning plan for Unit 1 within 120 days.

8	06/03/80	F	217.2	A	3	80-006	EA	ZZZZZZ	LOSS OF OFF-SITE POWER.
9	06/27/80	F	10.6	A	3		HA	GENERA	LOSS OF GENERATOR EXCITATION.

SUMMARY

THE UNIT OPERATED NEAR FULL POWER IN JUNE. ON 06/03/80 A LIGHTNING STRIKE BETWEEN SUBSTATIONS RESULTED IN ALL OFF-SITE POWER LOSS AND A REACTOR TRIP. DURING THE OUTAGE CONDENSOR TUBE LEAKS WERE REPAIRED AS WELL AS OTHER MAINTENANCE. ANOTHER TRIP OCCURRED ON 06/27/80 DUE TO A LOSS OF FIELD RELAY PROTECTION CAUSED BY A DEFECTIVE OVERCURRENT RELAY.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TS 4.4.H, THE LICENSEE FAILED TO EVALUATE HIS FINDINGS OF SURVEILLANCE DOCUMENT 3 PT-A 2 CONTAINMENT STRUCTURAL INSPECTION. (7929 INFRACTION)

CONTRARY TO TS SECTION 6.8.1.C & ADMIN PROCEDURE A-19, SURVEILLANCE TESTS WERE REVIEWED & ACCEPTED AS SATISFACTORY BY THE LICENSEE WITH DATA MISSING, PROCEDURE CHANGES NOT INCORPORATED & DISCREPANT CONDITIONS NOT PROPERLY EVALUATED & RESOLVED. (7929 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

MANAGERIAL ITEMS:

- Mr. S. Zulla has been appointed PASNY Resident Manager at Indian Point 3.
- FACILITY ITEMS (PLANS AND PROCEDURES):
- Licensee has completed his actions to comply with the 120 day requirements of the Confirmatory Order issued February 11, 1980.

PLANT STATUS:

Unit at 90% power.

- LAST IE SITE INSPECTION DATE: 6/26/80
- INSPECTION REPORT NO: 50-286/80-09

SUMMARY

INSPECTION SUMMARY

- 50-286/80-01 - Jan 20 - Mar 15: Routine unannounced inspection by the Resident Inspector and two regional based inspectors (108 hours) of plant operations including: log and record review; tour of the facility, observation of physical security, observation and review of plant trips and safety challenges, preparation for plant startup following refueling, startup testing-refueling, lessons learned verification, licensee's action in response to Immediate Action Letter 80-03, review of minor seismic event and personnel background checks. No items of noncompliance were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

BY NRC LETTER DATED NOVEMBER 5, 1979, TO MR. CORDELL REED, CHAIRMAN, WESTINGHOUSE OWNER'S GROUP, MR. D. F. ROSS, JR., DIRECTOR BULLETINS AND ORDERS TASK FORCE, PROMULGATED THE STAFF'S EVALUATION OF THE WESTINGHOUSE SMALL BREAK LOSS OF COOLANT ACCIDENT OPERATOR GUIDELINES, CLARIFIED VARIOUS COMMITMENTS ON THE PART OF THE OWNERS GROUP, AND ESTABLISHED DECEMBER 31, 1979, AS THE DATE FOR IMPLEMENTING THESE PROCEDURAL GUIDELINES IN THE OWNER'S PLANTS. CONTRARY TO THE ABOVE, INSPECTION INDICATES THAT PROCEDURES DO NOT REFLECT THE INFORMATION IN THE GUIDELINES. PROCEDURES ARE DEFICIENT IN THE FOLLOWING AREAS: (A) INITIAL SYMPTOMS AND IMMEDIATE OPERATOR ACTIONS HAVE NOT BEEN INCORPORATED IN AN EMERGENCY PROCEDURE, RATHER IT'S IN AN ABNORMAL PROCEDURE; (B) REQUIREMENT TO VERIFY NATURAL CIRCULATION IS NOT IN AN EMERGENCY PROCEDURE; (C) MOST OF THE CAUTIONS AND NOTES IN THE GUIDELINES ARE NOT INCORPORATED IN EMERGENCY PROCEDURES; (D) GUIDELINE REQUIREMENT TO INCORPORATE STEPS TO BE TAKEN IF A LOSS OF OFFSITE POWER OCCURS SUBSEQUENT TO A SAFETY INJECTION HAS NOT BEEN INCORPORATED IN SMALL-BREAK LOSS-OF-COOLANT ACCIDENT PROCEDURES. (8006 DEVIATION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS

The plant was shutdown May 9, 1980 for a scheduled 6 week refueling outage. (80-10)

PLANT STATUS

+ The plant returned to power operation on June 24, 1980, following a 6 week refueling outage.

+LAST IE SITE INSPECTION DATE: May 7 and 19-23, 1980

+ INSPECTION REPORT NO: 80-10

SUMMARY

INSPECTION SUMMARY

+ Inspection on May 13-15 and 28-30, (80-09): Review of inservice inspection program, procedures, observation of nondestructive examinations, and review of documentation. The inspection involved 64 inspector hours onsite by two NRC inspectors. Of the four areas examined, one apparent item of noncompliance was identified in one area (failure to train and qualify personnel in accordance with ANSI N45.2.6).

+ Inspection on May 7 and 19-23, (80-10): Routine, announced inspection of licensee event report followup, IE Bulletin followup, IE Circular followup, receipt of new fuel, preparation for refueling, refueling activities, maintenance refueling, and independent inspection. The inspection involved 33 inspector hours onsite by one NRC inspector. The inspection was accompanied by two NRC inspectors in-training. The management meeting involved 3 hours onsite by two NRC personnel. They were accompanied by two NRC inspectors in-training. Of the eight areas inspected, no items of noncompliance were identified in seven areas. Two items of noncompliance were identified in one area. (failure to follow procedures; and failure to report within one hour).

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR SECTION 50.72 REQUIRES, IN PART, LICENSEES OF NUCLEAR POWER REACTORS LICENSED UNDER SECTION 50.21 OR SECTION 50.22 TO NOTIFY THE NRC OPERATIONS CENTER AS SOON AS POSSIBLE AND IN ALL CASES WITHIN ONE HOUR BY TELEPHONE OF ANY EVENT RESULTING IN AUTOMATIC ACTUATION OF THE REACTOR PROTECTION SYSTEM. CONTRARY TO THE ABOVE REQUIREMENT, AT 7:21 P.M. ON APRIL 28, 1980, THE PLANT EXPERIENCED A REACTOR TRIP, DURING STARTUP AT LOW POWER, DUE TO A LOW REACTOR VESSEL LEVEL. THIS EVENT WAS NOT REPORTED WITHIN THE ONE HOUR TIME LIMIT AND NRC WAS NOT INFORMED OF THE OCCURRENCE UNTIL APPROXIMATELY 6:15 A.M. ON APRIL 29, 1980, DURING A ROUTINE STATUS CALL FROM THE NRC OPERATIONS CENTER. (8001 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS

+ During the month of April the Plant was shutdown for approximately 3 weeks to accomplish short-term TMI modifications as required by NUREG 0578. (80-01)

PLANT STATUS

Plant is operating routinely.

+LAST IE SITE INSPECTION DATE: March 19-20 and May 5-9, 1980

+ INSPECTION REPORT NO: 80-01

INSPECTION SUMMARY

+ Inspection on December 27-28, (79-24): Nonroutine, announced inspection of licensee actions taken in response to IE Bulletin 79-19, "Packaging of Low-Level Radioactive Waste for Transport and Burial." The inspection involved 12 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

+ Inspection on March 19-20 and May 5-9, (80-01): Routine, unannounced inspection of the licensee's quality assurance program; design, design changes, and modifications; plant operations; TMI short-term modifications; and followup actions relative to previous items of noncompliance, IE Bulletins, Licensee Event Reports, and open inspection items. The inspection involved 105 inspector hours onsite by three NRC inspectors. Of the eight areas inspected, no items of noncompliance or deviations were found in seven areas; one item of noncompliance was found in one area (failure to make prompt telephone notification to NRC Operations Center of significant event).

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

+ The No. one steam generator non-return valve was repaired. The plant was returned to full power operation. Chemical cleaning of the reactor coolant system to reduce core pressure drop was apparently successful and the plant began the use of lithium in the reactor coolant system to reduce corrosion and crud buildup.

PLANT STATUS:

+ The plant returned to power operation on June 13 following a maintenance outage.

+ LAST IE SITE INSPECTION DATE: 6/30/80

+ INSPECTION REPORT NO: 50-309/80-09

SUMMARY

INSPECTION SUMMARY

+ 50-309/80-06 - Apr 7-11 and 21-24: Routine unannounced inspection by two regional based inspectors (77 hours) of plant operations, including a tour of accessible areas and a review of logs and records; review of licensee action on selected previous inspection findings and selected IE Bulletins and Circulars; on site followup of selected Licensee Event Reports; and observation of preparation and shipment of radioactive waste. No items of noncompliance were identified.

+ 50-309/80-07 - May 5-9: Routine unannounced inspection by one regional based inspector (18 hours) of plant operations; followup on selected Licensee Event Reports; and licensee action to limit on-line containment purging and ventilation. No items of noncompliance were identified.

+ 50-309/80-08 - May 19-22: Unannounced Physical Protection inspection included a review of Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids, Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys and Combinations; Records and Reports; and Followup on IE Bulletin No. 79-16. Three items of noncompliance were identified: Explosives detector inoperable; Unlocked door; Vital Area lock defective.

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEM AND COMPONENT PROBLEMS:

- The plant was returned to power operation on 6/24 following an outage on 5/31 to repair main turbine extraction steam lines. During the outage repairs were made to the LPCI 'A' Containment Penetration Pipe restraint which was discovered in a degraded condition on 6/13.
- FACILITY ITEMS (PLANS AND PROCEDURES):
- An eight to ten week refueling outage is scheduled to commence on 9/19.

PLANT STATUS:

- The plant returned to power operation on 6/24. A trip occurred on 6/25 due to a pressure spike caused by the turbine control system.
- LAST IE SITE INSPECTION DATE: 6/27/80
- INSPECTION REPORT NO: 50-245/80-10

SUMMARY

INSPECTION SUMMARY

- 50-245/80-06 - Mar 30 - May 3: Routine, onsite, regular and backshift inspection by two resident inspectors and one regional based inspector (78 hours) of the control room and the accessible portions of the reactor, turbine, radioactive waste, gas turbine generator, and intake buildings; radiation protection; physical security; fire protection; plant operating records; surveillance of pipe supports; surveillance testing; calibration; maintenance; core power distribution limits; and reporting to the NRC. No items of noncompliance were identified.
- 50-245/80-07 - May 1-31: Routine, onsite, regular and backshift inspection by two resident inspectors (47 hours). Areas inspected included the control room and the accessible portions of the reactor, turbine, radioactive waste, gas turbine generator, and intake buildings; radiation protection; physical security; fire protection; plant operating records; surveillance testing; calibration; maintenance; core power distribution limits; and reporting to the NRC. No items of noncompliance were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

+ The plant returned to power operation on 6/24 following an outage on 5/8 to upgrade pipe restraints found to have less than acceptable factors of safety.

+ FACILITY ITEMS (PLANS AND PROCEDURES):

+ A nine week refueling outage is scheduled to commence on 8/2/80.

PLANT STATUS:

+ The plant was returned to power on 6/24.

+ LAST IE SITE INSPECTION DATE: 6/27/80

+ INSPECTION REPORT NO: 50-336/80-08

SUMMARY

INSPECTION SUMMARY

+ 50-336/80-04 - Mar 30 - May 3: Routine, onsite, regular and backshift inspection by two resident inspectors and one regional based inspector (131 hours) of the control room; the enclosure, auxiliary, turbine and intake buildings; and the condensate polishing facility; radiation protection; physical security; fire protection; plant operating records; surveillance of pipe supports; surveillance testing; calibration; maintenance; core power distribution limits; and reporting to the NRC. Three items of noncompliance were identified: (Failure to wear dosimetry in accordance with H.P. procedures; failure to meet snubber surveillance requirements; failure to comply with security procedures).

+ 50-336/80-05 - May 1-31: Routine, onsite, regular and backshift inspection by two resident inspectors (65 hours). Areas inspected included the control room, primary containment enclosure, auxiliary, turbine and intake buildings; and the condensate polishing facility; radiation protection; physical security; fire protection; plant operating records; surveillance testing; calibration; maintenance; core power distribution limits; and reporting to the NRC. No items of noncompliance were identified.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-018/01T	05/08/80	05/22/80	Several service water piping support hangers were identified as not having a factor of safety greater than two. The plant was placed in cold shutdown to effect repairs.
80-020/03L	04/29/80	05/29/80	Stuck open pressurizer spray valve resulted in reactor coolant pressure less than that specified for DNB margin. Valve failure due to a loose valve seat.
80-021/03L	05/06/80	05/06/80	Diesel generator breaker reclosed following manual tripping. Generator returned to bus out of phase. The failure was due to a loose bolt on latch in spring charging system.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 71.5, NO LICENSEE SHALL TRANSPORT ANY LICENSED MATERIAL OUTSIDE THE CONFINES OF HIS PLANT OR OTHER PLACE OF USE, UNLESS THE LICENSEE COMPLIES WITH THE APPLICABLE REQUIREMENTS OF THE REGULATIONS APPROPRIATE TO THE MODE OF TRANSPORT OF THE DEPARTMENT OF TRANSPORTATION IN 49 CFR PARTS 170-189. CONTRARY TO THE ABOVE, ON MARCH 3, 1980, THE DAY OF THE INSPECTION A CASK SHIPPED FROM YOUR MONTICELLO FACILITY WAS NOT MARKED "RADIOACTIVE LSA" AS REQUIRED BY 49 CFR 173.392(C)(8). THIS A SEVERITY LEVEL IV NONCOMPLIANCE. (8008 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

MANAGERIAL ITEMS

- Mr. L. R. Eliason, former Plant Manager, has been promoted to General Manager, Nuclear Plants. Mr. G. H. Neils is now General Manager, Headquarters Nuclear Group. Mr. W. A. Shamla has been selected as the new Plant Manager. (80-09)

PLANT STATUS

- Routine operation at 100% at months end.

- LAST IE SITE INSPECTION DATE: May 20-22, 1980

- INSPECTION REPORT NO: 80-10

SUMMARY

INSPECTION SUMMARY

- Inspection on March 24, 27-30; April 24-25 and May 6-7, (80-06): Routine, announced inspection of containment integrated leak rate test; local leak rate testing; and followup on previous inspection findings related to leak rate testing. The inspection involved 82 inspector hours onsite by three NRC inspectors. No items of noncompliance or deviations were identified.

- Inspection on April 28 through May 2, (80-09): Routine, unannounced inspection of plant operations, torus-drywell vacuum breaker modification, and recirculation pump seal failures. The inspection involved 66 inspector hours onsite by two NRC inspectors. No items of noncompliance or deviations were identified.

- Inspection on May 20-22, (80-10): A routine, unannounced inspection of fire protection/prevention, IE Bulletin followup, calibration, and review of plant operations. The inspection involved 22 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified in these areas.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TS 6.5.1.6, 6.5.1.7 & 6.6.1, THE SITE OPERATIONS REVIEW COMMITTEE FAILED TO DOCUMENT PERFORMANCE OF REQUIRED REVIEWS. (8004 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS:

- The unit operated continuously at essentially full power on four recirculation pumps with the exception of one shutdown to perform Technical Specification core spray isolation valve surveillance. Power limitations have been necessary due to condenser delta temperature limits. Representative stack and offgas release rates are 15,000 and 20 microcuries per second, respectively.

- LAST IE SITE INSPECTION DATE: 6/27/80

- INSPECTION REPORT NO: 50-220/80-06

SUMMARY

INSPECTION SUMMARY

- 50-220/80-04 - May 5-9: Routine, unannounced inspection by two regional based inspectors (62 hours) of onsite review committee performance; site organization and administration; licensee event report followup, and facility tours. One item of non-compliance was found: Failure to document Site Operations Review Committee Reviews.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-009/ 03L	05/21/80	06/03/80	Containment spray isolation valve inoperable
80-010/ 03L	05/28/80	06/03/80	Cardox tank pressure below Technical Specification limit

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TECHNICAL SPECIFICATION 4.8.2.A AND 4.8.2.3.2.A, PERIODIC TEST PROCEDURE 1-PT-85 (D.C. DISTRIBUTION SYSTEMS) WAS PERFORMED IN EXCESS OF THE 7-DAY INTERVAL PLUS 25%.
(8022 INFRACTION)

AS REQUIRED BY APPENDIX B, ENVIRONMENTAL TECHNICAL SPECIFICATION 5.5.1, DETAILED WRITTEN PROCEDURES SHALL BE PREPARED AND FOLLOWED FOR ALL ACTIVITIES IN CARRYING OUT ENVIRONMENTAL TECHNICAL SPECIFICATIONS AND THE PROCEDURES SHALL INCLUDE SAMPLING. PROCEDURE H.P. - REMM-4, DATED SEPTEMBER 27, 1979, FOR MILK SAMPLING WAS INADEQUATE IN THAT THE SPECIFIED SAMPLE PRESERVATION TECHNIQUE WAS NOT COMPATIBLE WITH THE ANALYTICAL PROCEDURE USED FOR RADIOIODINE ANALYSIS OF MILK SAMPLES.
(8025 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

NONE.

FACILITY ITEMS (PLANS AND PROCEDURES):

NONE.

MANAGERIAL ITEMS:

NONE.

PLANT STATUS:

UNIT IS OPERATING AT 98% POWER.

LAST IE SITE INSPECTION DATE: MAY 21, 1980

INSPECTION REPORT NO: 50-338/80-26

SUMMARY

INSPECTION SUMMARY

INSPECTION MAY 12-16 (80-22): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 29 INSPECTOR-HOURS ON SITE IN THE INSPECTION OF PREVIOUSLY IDENTIFIED ITEMS. OF THE AREAS INSPECTED, ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN THE AREA OF PERIODIC TEST PROCEDURES (INFRACTION - FAILURE TO IMPLEMENT SURVEILLANCE TEST).

INSPECTION MAY 12-15 (80-23): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 29 INSPECTOR-HOURS ON SITE IN THE AREAS OF IE BULLETIN 79-14, "SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS" AND LICENSEE ACTIONS ON LICENSEE IDENTIFIED ITEMS. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MAY 19-23 - JUNE 2 (80-25): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 16.5 INSPECTOR-HOURS ON SITE IN THE AREAS OF QUALITY CONTROL AND CONFIRMATORY MEASUREMENTS INCLUDING: REVIEW OF THE LABORATORY QUALITY CONTROL PROGRAM; REVIEW OF CHEMICAL AND RADIOCHEMICAL PROCEDURES; QUALITY CONTROL AUDITS; COMPARISON OF THE RESULTS OF SPLIT SAMPLES ANALYZED BY THE LICENSEE AND THE NRC REGION II MOBILE LABORATORY; AND ENVIRONMENTAL MONITORING. OF THE FIVE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FOUR AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO HAVE AN ADEQUATE PROCEDURE FOR PRESERVATION OF MILK SAMPLES FOR RADIOIODINE ANALYSIS).

REPORTS RECEIVED FROM LICENSEE

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 20.203(C)(2) EACH ENTRANCE OR ACCESS POINT TO A HIGH RADIATION AREA SHALL BE MAINTAINED LOCKED EXCEPT DURING PERIODS WHEN ACCESS TO THE AREA IS REQUIRED, WITH POSITIVE CONTROL OVER INDIVIDUAL ENTRY. CONTRARY TO THE ABOVE, ON OCTOBER 11, 1979 THE DOOR LEADING TO ROOM 251 (DEBORATING DEMINERALIZER HATCH AREA) WAS FOUND UNLOCKED. POSITIVE CONTROL OVER EACH INDIVIDUAL ENTRY WAS NOT IN EFFECT.
(7925 INFRACTION)

CONTRARY TO TECHNICAL SPECIFICATION 6.4.1, ON MAY 22, 1980 FUEL HANDLING PROCEDURE OP/0/A/1506/01 WAS USED TO TRANSFER A SPENT FUEL ASSEMBLY TO THE SHIPPING CASK. THIS PROCEDURE WAS NOT CHECKED WITH THE CONTROL COPY PRIOR TO USE AND, IN FACT HAD BEEN REVISED BY TWO REVISIONS DATED DECEMBER 1, 1979 AND MAY 13, 1980.
(8020 INFRACTION)

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 6.6.2.1.B, WRITTEN REPORTS OF THE TYPES OF EVENTS LISTED IN THAT SPECIFICATION ARE TO BE SUBMITTED TO THE DIRECTOR, OFFICE OF INSPECTION AND ENFORCEMENT, REGION II, WITHIN 30 DAYS OF THE OCCURRENCE OF THE EVENT. CONTRARY TO THE ABOVE, FOUR OF THE THIRTEEN LICENSEE EVENTS REPORTS FOR UNITS 1 AND 3 SUBMITTED DURING THE PERIOD NOVEMBER 1, 1978 TO JANUARY 15, 1979 WERE SUBMITTED FROM ONE TO THREE DAYS LATER THAN REQUIRED.
(7901 DEFICIENCY)

AS REQUIRED BY 10 CFR 20.203(C)(2) EACH ENTRANCE OR ACCESS POINT TO A HIGH RADIATION AREA SHALL BE MAINTAINED LOCKED EXCEPT DURING PERIODS WHEN ACCESS TO THE AREA IS REQUIRED, WITH POSITIVE CONTROL OVER INDIVIDUAL ENTRY. CONTRARY TO THE ABOVE, ON OCTOBER 11, 1979 THE DOOR LEADING TO ROOM 251 (DEBORATING DEMINERALIZER HATCH AREA) WAS FOUND UNLOCKED. POSITIVE CONTROL OVER EACH INDIVIDUAL ENTRY WAS NOT IN EFFECT.
(7923 INFRACTION)

AS REQUIRED BY 10CFR50 APPENDIX B, CRITERIA XIV AND AS IMPLEMENTED IN SECTION 17.2.14 OF DUKE-1-A, QUALITY ASSURANCE PROGRAM MEASURES TO MAINTAIN EQUIPMENT STATUS SHALL BE UTILIZED. THE ADMINISTRATIVE POLICY MANUAL FOR NUCLEAR STATIONS, SECTION 3.1.3 FURTHER REQUIRES MEASURES TO BE ESTABLISHED TO ASSURE ACCURATE KNOWLEDGE OF COMPONENT STATUS IS AVAILABLE FOR APPROPRIATE ACTION CONSISTENT WITH THE STATUS OF THE ITEM. THE BORON CONTENT OF A DEMINERALIZER PLACED INTO SERVICE ON MAY 5, 1980, WAS NOT ACCURATELY REFLECTED IN THE STATUS BOARD IN THE CONTROL ROOM. CONSEQUENTLY AN UNPLANNED REACTIVITY ADDITION OF APPROXIMATELY 4.45% DELTA K/K OCCURRED.
(8015 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4.1 A AND B DETAILED PROCEDURES FOR CONTROL AND OPERATION OF SYSTEMS AND COMPONENTS INVOLVING NUCLEAR SAFETY OF THE FACILITY SHALL BE PROVIDED. THIS REQUIREMENT IS ALSO CONTAINED IN DUKE-1-A, QUALITY ASSURANCE PROGRAM AND IS FURTHER IMPLEMENTED IN SECTION 3.1.4 OF THE ADMINISTRATIVE POLICY MANUAL FOR NUCLEAR STATIONS. FOLLOWING REFUELING ACTIVITIES ON OR ABOUT APRIL 11, 1980 DATA WAS NOT AVAILABLE OR PROVIDED TO CONTROL ROOM OPERATORS FOR USE IN OP/2/A/1103/15, "REACTIVITY BALANCE". CONSEQUENTLY THE CONTROL ROOM OPERATORS COULD NOT CALCULATE SHUTDOWN MARGIN AS REQUIRED BY TECHNICAL SPECIFICATION 3.1.3.4.
(8015 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.2.1, WHICH IS IMPLEMENTED BY OCONEE NUCLEAR STATION DIRECTIVE 3.1.10, ANY REPORTABLE OCCURRENCE SHALL BE INVESTIGATED PROMPTLY. ON JUNE 7, 1980 A REPORTABLE EVENT INVOLVING A REACTIVITY INSERTION OF MORE THAN 0.5% DELTA K/K OCCURRED BUT WAS NOT PROMPTLY INVESTIGATED.
(8015 INFRACTION)

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-002/03L/0	-	05/23/80	HYDRAULIC SHOCK SUPPRESSOR DECLARED INOPERATIVE.
80-003/03L-0	05/07/80	05/21/80	SPARE PURIFICATION DEMINERALIZER USE RESULTED IN DEBORATION FROM 1895 TO 1539 PPM. UNPLANNED REACTIVITY INSERTION ON GREATER THAN 0.5% DK/K. UNIT IN REFUELING OUTAGE.

SUMMARY

INSPECTION SUMMARY

INSPECTION MAY 1-30 (80-15): THIS INSPECTION INVOLVED 83.3 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, PHYSICAL PROTECTION, OFFSITE FUEL SHIPMENT AND SURVEILLANCE ACTIVITIES. OF THE FOUR AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN THREE AREAS; THREE APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN ONE AREA (INFRACTION - FAILURE TO MAINTAIN CORRECT STATUS OF DEMINERALIZER; INFRACTION - FAILURE TO PROVIDE DATA TO DETERMINE A SHUTDOWN MARGIN; INFRACTION - FAILURE TO PROMPTLY INVESTIGATE AN UNPLANNED REACTIVITY INSERTION OF MORE THAN 0.5% DK/K).

INSPECTION MAY 28-30 (80-16): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 72 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONTAINMENT INTEGRATED LEAK RATE TESTING WHICH INCLUDED INSPECTION OF THE TEST PROCEDURE, INSTRUMENT CALIBRATION, DATA PROCESSING AND VALVE ALIGNMENT. OF THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN THREE AREAS; TWO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN ONE AREA (INFRACTION - FAILURE TO FOLLOW PROCEDURE; AND INFRACTION - FAILURE TO PROVIDE ADEQUATE PROCEDURE).

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 20.103(C), "EXPOSURE OF INDIVIDUALS TO CONCENTRATIONS OF RADIOACTIVE MATERIALS IN AIR IN RESTRICTED AREAS" REQUIRES IN PART THAT: WHEN RESPIRATORY PROTECTIVE EQUIPMENT IS USED TO LIMIT THE INHALATION OF AIRBORNE RADIOACTIVE MATERIAL PURSUANT TO PARAGRAPH (B)(2) OF THIS SECTION, THE LICENSEE MAY MAKE ALLOWANCE FOR SUCH USE IN ESTIMATING EXPOSURE OF INDIVIDUALS TO SUCH MATERIALS PROVIDED THAT SUCH EQUIPMENT IS USED AS STIPULATED IN REGULATORY GUIDE 8.15, "ACCEPTABLE PROGRAMS FOR RESPIRATORY PROTECTION." SECTION C.4 OF REGULATORY GUIDE 8.15 STATES IN PART, "THE LICENSEE IS TO MAINTAIN AND IMPLEMENT A RESPIRATORY PROTECTION PROGRAM THAT INCLUDES, AS A MINIMUM...E. WRITTEN OPERATIONAL AND ADMINISTRATIVE PROCEDURES FOR CONTROL, ISSUANCE, PROPER USE, AND RETURN OF RESPIRATORY PROTECTIVE EQUIPMENT..." CONTRARY TO THE ABOVE, AS OF JANUARY 23, 1980, NO ADEQUATE OPERATIONAL OR ADMINISTRATIVE PROCEDURES ADDRESSING CONTROL AND ISSUANCE OF BREATHING AIR FITTINGS WAS INCLUDED IN THE LICENSEE'S RESPIRATORY PROTECTION PROGRAM. LICENSEE PROCEDURE 915.5 ADDRESSED RESPONSIBILITY FOR THIS AREA, HOWEVER, THIS GUIDANCE WAS INADEQUATE TO PREVENT IMPROPER USE OF THE FITTINGS.
(8003 INFRACTION)

10 CFR 20.203(F) REQUIRES THAT EACH CONTAINER OF LICENSED MATERIAL SHALL BEAR A DURABLE, CLEARLY VISIBLE LABEL IDENTIFYING THE RADIOACTIVE CONTENTS. THE LABEL SHALL BEAR THE RADIATION CAUTION SYMBOL AND THE WORDS "CAUTION RADIOACTIVE MATERIAL" OR "DANGER RADIOACTIVE MATERIAL". THE LABEL SHALL ALSO PROVIDE SUFFICIENT INFORMATION TO PERMIT INDIVIDUALS HANDLING OR USING THE CONTAINERS, OR WORKING IN THE VICINITY THEREOF TO TAKE PRECAUTIONS TO AVOID OR MINIMIZE EXPOSURES. 1. CONTRARY TO THE ABOVE, ON JANUARY 21, 1980 TWO 4' X 4' X 6' CONTAINERS LOCATED OUTSIDE THE OLD RADWASTE BUILDING CONTAINED LICENSED RADIOACTIVE MATERIAL AND WERE NOT LABELED AND NO EXEMPTION APPLIED. 2. CONTRARY TO THE ABOVE, ON JANUARY 25, 1980, TWO 55 GALLON DRUMS, LOCATED ON THE FLOOR OF THE TORUS CONTAINED LICENSED RADIOACTIVE MATERIAL AND WERE NOT LABELED AND NO EXEMPTION APPLIED. THE DRUMS INDICATED UP TO 5000 MILLIREM/HR ON CONTACT.
(8003 DEFICIENCY)

10 CFR 20.201, "SURVEYS", STATES IN PARAGRAPH (B), "EACH LICENSEE SHALL MAKE OR CAUSE TO BE MADE SUCH SURVEYS AS MAY BE NECESSARY FOR HIM TO COMPLY WITH THE REGULATIONS IN THIS PART. A SURVEY AS DEFINED IN PARAGRAPH 20.201(A) MEANS, "AN EVALUATION OF THE RADIATION HAZARDS INCIDENT TO THE PRODUCTION, USE, RELEASE, DISPOSAL, OR PRESENCE OF RADIOACTIVE MATERIALS OR OTHER SOURCES OF RADIATION UNDER A SPECIFIC SET OF CONDITIONS. WHEN APPROPRIATE, SUCH EVALUATION INCLUDES A PHYSICAL SURVEY OF THE LOCATION OF MATERIALS AND EQUIPMENT, AND MEASUREMENTS OF LEVELS OF RADIATION OR CONCENTRATIONS OF RADIOACTIVE MATERIAL PRESENT." 10 CFR 20.202, "PERSONNEL MONITORING" STATES IN PARAGRAPH (A) THAT "EACH LICENSEE SHALL SUPPLY APPROPRIATE PERSONNEL MONITORING EQUIPMENT TO, AND SHALL REQUIRE THE USE OF SUCH EQUIPMENT BY...(1) EACH INDIVIDUAL WHO ENTERS A RESTRICTED AREA UNDER SUCH CIRCUMSTANCES THAT HE RECEIVES, OR IS LIKELY TO RECEIVE, A DOSE IN ANY CALENDAR QUARTER IN EXCESS OF 25 PERCENT OF THE A PPLICABLE VALUE SPECIFIED IN PARAGRAPH (A) OF PARA 20.101. CONTRARY TO THE ABOVE AS OF JANUARY 25, 1980 INDIVIDUALS, ENTERING PARTS OF THE RESTRICTED AREA, WERE EXPOSED TO INTENSITIES OF BETA RADIATION UP TO 1500 MRAD/HR AND A SURVEY WAS NOT PERFORMED TO DETERMINE IF APPROPRIATE PERSONNEL MONITORING DEVICES WERE REQUIRED OR PROVIDED PURSUANT TO 10 CFR 20.202.
(8003 INFRACTION)

TECHNICAL SPECIFICATION 6.11 REQUIRES THAT PROCEDURES FOR PERSONNEL RADIATION PROTECTION SHALL BE PREPARED CONSISTENT WITH THE REQUIREMENTS OF PART 20 AND SHALL BE ADHERED TO FOR ALL OPERATIONS INVOLVING PERSONNEL RADIATION EXPOSURE. 1. PROCEDURE 902.7, REVISION 1, REQUIRES IN SECTION 5.4 THAT THE ALARM SET POINT OF THE RADIATION MONITORS SHALL HAVE ALARM SET POINTS SET BETWEEN TWO AND FIVE TIMES THE VALUE OF THE BACKGROUND IN THE AREA OF THE DETECTOR. DURING FUEL MOVEMENT ON JANUARY 24, 1980, AT 9:00 P.M. ONE OF THE TWO RADIATION MONITORS, USED FOR EVACUATION PURPOSES, WAS FOUND TO HAVE AN ALARM SET POINT TWELVE (12) TIMES THE VALUE OF THE BACKGROUND IN THE AREA OF THE DETECTOR. 2. PROCEDURE 915.7, REVISION 0, STATES IN SECTION 5.3, "THE TOLD AND SELF READING DOSIMETERS SHALL NORMALLY BE WORN IN THE FRONT OF THE BODY BETWEEN THE HEAD AND WAIST. ON JANUARY 21, 1980 ONE INDIVIDUAL WAS OBSERVED WEARING HIS TLD AND SELF READING DOSIMETERS SUSPENDED ABOUT THREE INCHES BELOW AND BEHIND HIS BELT AGAINST THE LEFT REAR POCKET. 3. PROCEDURE 9.11.1, REVISION 0, STATES IN PROCEDURE SECTION 5.1, THAT "ALL RADIOACTIVE WASTE MATERIAL SHALL BE STORED IN SUCH A MANNER SO AS TO REDUCE TO A MINIMUM: ...5.1.2 THE RADIATION EXPOSURE DOSE RATES FOR WORKING PERSONNEL." ON JANUARY 24, 1980, RADIOACTIVE WASTE WAS FOUND AT THE PERSONNEL ENTRANCE TO THE TORUS AND ON THE TORUS CATWALK EMANATING CONTACT DOSERATES OF 43 MILLIREM/HR. AND 3000 MILLIREM/HR. RESPECTIVELY. PERSONNEL, IN GOING TO AND FROM THEIR WORK LOCATIONS, REPEATEDLY PASSED BY THE DRUMS OF WASTE AND WERE AT TIMES OBSERVED TO BE LEANING AGAINST THE DRUMS AT THE TORUS ENTRANCE.
(8003 INFRACTION)

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-016/01T	05/12/80	05/23/80	Defective main generator load reject sensor pressure switch
80-017/01T	05/16/80	05/30/80	Rod block bypass jumpers (2) were left in place. Administrative control checks prevented more than 1 rod being moved during refueling.
80-020/01T	06/05/80	06/18/80	Identification of degraded fire barriers and failure to establish required fire watch.

CONTRARY TO 10 CFR 50.55(A)(G)(4), AS OF 3/20/80, PUMP & VALVE OPERABILITY TESTS REQUIRED BY ASME SECTION XI WERE NOT COMPLETED NOR HAVE PROCEDURES BEEN APPROVED TO IMPLEMENT THE REQUIRED TESTS.
(8010 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

- SYSTEMS AND COMPONENT PROBLEMS:
- Additional crack indications (2) have been identified by the licensee in Core Spray System II. Evaluation by the licensee and the NRC is in progress.

PLANT STATUS:

- The plant is shutdown for refueling with return to operation scheduled for the week of July 7, 1980.
- LAST IE SITE INSPECTION DATE: 6/30/80
- INSPECTION REPORT NO: 50-219/80-24

SUMMARY

INSPECTION SUMMARY

- 50-219/79-25 - June 25: Special enforcement meeting convened by Region I management to discuss NRC concerns relating to NRC Radiation Protection Inspection No. 50-219/79-07. The meeting was held to discuss licensee immediate corrective actions and long term plans for improving the licensee's Radiation Protection Program.
- 50-219/80-06 - Feb 4-8: Routine, unannounced inspection by one regional based inspector (40 hours) of activities associated with the inservice inspection program. No items of noncompliance were identified.
- 50-219/80-16 - May 5-9: Routine, unannounced inspection by one regional based inspector (37 hours) of licensee action on previous inspection findings; administrative controls for facility procedures; conformance to Technical Specifications; temporary and permanent changes in conformance to Technical Specifications and licensee procedures; changes in procedures to 10 CFR 50.59(a) and (b) requirements; checklists and related forms for currency to latest changes; and, control room tour. No items of noncompliance were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 6.8.1 STATES, IN PART, "WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED...." CONTRARY TO THE ABOVE, THE FOLLOWING EXAMPLE OF FAILURE TO FOLLOW PROCEDURES WERE IDENTIFIED. (1) STATION PROCEDURE S.3.2.A.1, REVISION 4, DATED MAY 15, 1978, PROVIDES A CHECK-OFF LIST, S.3.2.A.1.A.2, FOR POSITIONING THE RESIDUAL HEAT REMOVAL SYSTEM MANUAL VALVES FOR OPERATION. ON APRIL 12, 1979, THE UNIT 2 RHR PRESSURIZING TO HEAD SPRAY HEADER INNER VALVE WAS FOUND TO BE INCORRECTLY POSITIONED AND NOT IN ACCORDANCE WITH CHECK OFF LIST S.3.2.A.1.A.2. (2) STATION PROCEDURE S.3.2.A.1, REVISION 4, DATED MAY 15, 1978, PROVIDES A CHECK-OFF LIST, S.3.2.A.1.A.2, FOR POSITIONING THE RESIDUAL HEAT REMOVAL SYSTEM MANUAL VALVES FOR OPERATION. ON APRIL 12, 1979, THE UNIT 2 RHR PRESSURIZING TO SHUTDOWN COOLING SUCTION HEADER OUTER VALVE WAS FOUND TO BE INCORRECTLY POSITIONED AND NOT IN ACCORDANCE WITH CHECK-OFF LIST S.3.2.A.1.A.2. (3) STATION PROCEDURE, S.8.4.A, REVISION 3, DATED JULY 13, 1977 PROVIDES A CHECK-OFF LIST, S.8.4.A, FOR MAKING THE APPROPRIATE MECHANICAL AND ELECTRICAL CHECKS TO SET UP THE DIESEL GENERATORS LOCALLY FOR AUTOMATIC OPERATION. ON APRIL 12, 1979, TWO OF SEVEN VALVES REQUIRED TO BE LOCKED IN ACCORDANCE WITH S.8.4.A WERE FOUND TO BE NOT LOCKED. (RECURRENT)
(7911 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

MANAGERIAL ITEMS:

- Members of licensee management met with NRC Region I staff on June 19, 1980 to discuss licensee performance. This meeting was conducted as part of the systematic/assessment of licensee performance (SALP) program.
- The NRC conducted a health physics team inspection at the facility June 16-27.

PLANT STATUS:

- The unit remained shutdown for refueling and torus modifications throughout the month.

- LAST IE SITE INSPECTION DATE: 6/30/80
- INSPECTION REPORT NO: 50-277/80-20

SUMMARY

INSPECTION SUMMARY

- 50-277/80-17 - June 4-5: Routine, announced inspection by one regional based inspector (31 hours) of the components identified in the Main Steam and Feedwater System of licensee's response to NRC Bulletin 79-01B dated April 15, 1980. No items of noncompliance were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO LICENSEE TRAINING MANUAL IMPLEMENTATION OF 10 CFR 55, APPENDIX A, PARA. 5, RECORDS, THE 1979 ANNUAL REVIEW BY THE STATION MANAGER WAS NOT RECORDED & THE 1979 ANNUAL EXAMINATION RESULTS WERE NOT RECORDED ON THE PILGRIM NUCLEAR POWER STATION LICENSED OPERATOR REQUALIFICATION SUMMARY RECORDS FOR THE 10 RECORDS REVIEWED.
(8014 DEFICIENCY)

TS 6.8.D STATES THAT "WRITTEN PROCEDURES TO IMPLEMENT THE FIRE PROTECTION PROGRAM SHALL BE ESTABLISHED, IMPLEMENTED & MAINTAINED." LICENSEE'S PROCEDURES #8A.6-1, FIRE EXTINGUISHER CHECKS, REV. 5, 8/9/78 STATES IN PART, "PERFORM A FIRE EXTINGUISHER CHECK ON EXTINGUISHERS ONCE PER MONTH...THE INSPECTION PROCEDURE SHOULD DETERMINE THAT: 1. THE EXTINGUISHER IS IN ITS DESIGNATED PLACE. 2. ACCESS OR VISIBILITY OF THE EXTINGUISHER IS NOT OBSTRUCTED... 6. MAINTENANCE RECOD TAG IS UP TO DATE...." CONTRARY TO THE ABOVE, AS OF 4/25/80, FIRE EXTINGUISHERS HAVE BEEN EITHER REMOVED FROM THEIR DESIGNATED PLACES OR THE EXTINGUISHERS WERE FOUND TO BE OBSTRUCTED BY TEMPORARY EQUIPMENT, THUS LEAVING VITAL PLANT AREAS W/O ADEQUATE FIRST AID FIRE PROTECTION. MAINTENANCE RECORD TAGS ON MOST EXTINGUISHERS WERE NOT UP TO DATE.
(8016 INFRACTION)

FAILURE TO USE ESTABLISHED CONTROLS FOR FOREIGN MATERIAL AS SPECIFIED IN MAINTENANCE PROCEDURE.
(8018 DEFICIENCY)

CONTRARY TO 10 CFR 50, APPENDIX J, SECTION III.A.1.(A), DURING THE TYPE A TEST ONE REPAIR AND ONE ADJUSTMENT TO THE CONTAINMENT ISOLATION BOUNDARY WERE MADE WITHOUT MEASURING (QUANTIFYING) THE "AS FOUND" LEAKAGE. THEY ARE: (1) ATTEMPTED REPAIR (TIGHTENING) OF THE LEAKING 8 INCH PIPE FLANGE ON THE RCIC TURBINE EXHAUST LINE ON MAY 5, 1980. (2) MADE ADJUSTMENT BY CLOSURE OF VALVE AO5033A IN THE CONTAINMENT ATMOSPHERIC CONTROL SYSTEM ON MAY 6, 1980.
(8020 INFRACTION)

CONTRARY TO 10 CFR 50, APPENDIX J, SECTION IV, A AND STATION PROCEDURE 8.7.1.3, AN 8 INCH PIPE FLANGE ON THE RCIC TURBINE EXHAUST LINE, WHICH IS PART OF THE PRIMARY REACTOR CONTAINMENT BOUNDARY, WAS DISASSEMBLED FOR MAINTENANCE ON MAY 2, 1980 AND WAS NOT RETESTED TO VERIFY THAT THE COMBINED LEAKAGE RATE FOR PENETRATIONS AND VALVES WAS WITHIN THE ALLOWABLE LIMITS.
(8020 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS:

- The plant is presently operating at full power with representative stack and offgas release rates of 6 and 17,000 microcuries/sec., respectively.

LAST IE SITE INSPECTION DATE: 5/31/80

INSPECTION REPORT NO: 50-293/80-23

SUMMARY

INSPECTION SUMMARY

- 50-293/80-16 - Apr 21-25: Announced inspection by one regional based inspector (32 hours) of the plant Fire Protection/Prevention Program, including: implementation of administrative controls; fire brigade training; observation of ignition source and combustible materials control; review and observation of plant modifications; and observation of critical plant areas One item of noncompliance was identified: Failure to follow plant fire extinguishers check procedure.
- 50-293/80-19 - Apr 28 - May 2: Investigation by one regional based investigator (38 hours) of allegations contained in news paper articles dated May 20, april 3, and April 8, 1980. None of the allegations investigated were found to be substantiated. No items of noncompliance were identified.

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-017/03L	05/05/80	06/02/80	Three unsuccessful attempts to perform 24 hour test of diesel generator pursuant to IEB 79-23.

- 50-293/80-20 - May 4-8: Routine unannounced inspection by one regional based inspector (42 hours) of Containment Leak Rate Testing and licensee action on previous inspection findings. Two items of noncompliance: Failure to conduct CILRT in accordance with 10 CFR 50, Appendix J; and, failure to perform local leak rate test following maintenance.
- 50-293/80-24 - Apr 9-10: Routine, announced inspection by one regional based inspector (12 hours) of the installed Main Steam ADS System Relief Valve Solenoid Valves including cable, raceways, junction boxes and penetrations as described in the IEB 79-01B licensee submittal dated April 1, 1980. No items of noncompliance were identified.

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
	06/04/80	S	49.2	B	3				SHUTDOWN TO RETURN 2M TRANSFORMER TO SERVICE AND PERFORM MAINTENANCE ON THE TURBINE OIL SYSTEM.
	06/06/80	S	3.6	H	1				MANUAL TURBINE TRIP BECAUSE OF HIGH VIBRATION.
	06/09/80	F	.0	H	5				POWER WAS REDUCED TO 65% FROM 06/09/80 TO 06/13/80 DUE TO DOWNED LINES FROM SUBSTATION.

SUMMARY

THE UNIT WAS SHUTDOWN ON 06/04/80 FOR MAINTENANCE ON TURBINE SYSTEM. A MANUAL TURBINE TRIP OCCURRED ON 06/06/80. THE UNIT RAN NORMALLY AFTERWORDS WITH A POWER REDUCTION ON 06/09/80 DUE TO DOWN LINES.

INSPECTION REPORT NO. 50-312/80-20+

SUMMARY

INSPECTION SUMMARY

+ Inspection on May 5-9, 1980 (Report No. 50-312/80-13) Areas Inspected: Routine, unannounced inspection of the document control program; Onsite Review Committee operations; the reactor operator requalification program; and followup on an IE Bulletin. The inspection involved 36 inspector hours onsite by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

+ Inspection On April 14-26, 1980 (Report No. 50-312/80-15) PAT Inspection; report being prepared.

+ Inspection on May 1-30, 1980 (Report No. 50-312/80-17) Areas Inspected: Routine inspections of operations; plant trips; followup on items of noncompliance; followup on Headquarters' requests; and independent inspection effort. The inspection involved 76 inspector hours onsite by the senior Resident Inspector.

Results: No items of noncompliance or deviations were identified.

+ Inspection on June 9-13, 1980 (Report No. 50-312/80-18) Areas Inspected: Routine, unannounced inspection of operator requalification program; procedures for control of test and measuring equipment; overall facility procedure status; followup of proposed plant modifications; and witnessing of an emergency drill. The inspection involved 34 inspector hours onsite by one NRC inspector.

Results: Of the five areas inspected, no items of noncompliance or deviations were found in three areas. Two items of noncompliance were found in two areas (Infraction - Absence of documentation showing that an operator had completed the approved requalification program as certified; and Infraction - Failure to provide list of items requiring calibration and identify calibration frequency).

+ Inspection on June 9-13, 1980 (Report No. 50-312/80-19) Areas Inspected: Routine, unannounced inspection by a Regional based inspector of the radiation protection program during operation including: training; observation of the annual emergency drill; and tours of the controlled area. The inspection involved 36 inspector hours onsite by one NRC inspector.

Results: Of the three areas inspected, no items of noncompliance or deviations were found in two areas. Two items of noncompliance were found in one area (Infraction - Failure to instruct workers, 10 CFR 19.12; Infraction - Failure to maintain a retraining program, Technical Specification 6.4.1).

+ Inspection on June 2-30, 1980 (Report No. 50-312/80-20) Report being prepared; to be reported next month.

SUMMARY

INSPECTION SUMMARY

- 50-272/80-03 - Jan 28 - Feb 8: Special, announced Health Physics Appraisal inspection including a review of selected procedures and representative records, observed work practices, and interviewed personnel. Three items of noncompliance were identified: 1. Failure to follow radiation protection calibration procedures; 2. Failure to properly review and approve procedures; 3. Failure to label containers of radioactive material.
- 50-272/80-06 - Mar 30 - Apr 30: Routine inspections by the resident inspectors (67 hours) of plant operations including: tours of the facility; log and record reviews; IE Circulars; management meetings; implementation of containment isolation and control rod guidance; and, followup on previous inspection items. Five items of noncompliance were identified: 1. Partial isolation of Auxiliary Feedwater without taking appropriate action as required by Technical Specifications; 2. Exceeding licensed power level during steady state operation; 3. Failure to record individual rod position every four hours as required by Technical Specifications; 4. Failure to conduct monthly calibrations of feedwater flow instrumentation as required by 10 CFR 50, Appendix B, Criterion XII; 5. Failure to conduct quadrant power tilt ratio every twelve hours.
- 50-272/80-11 - May 1-31: Routine inspections by the resident inspectors (46 hours) of plant operations including tours of the facility; log and record reviews; review of licensee events; operational safety verification; review of strike contingency plans; and, followup on previous inspection items. No items of noncompliance were identified.
- 50-272/80-15 - May 19-21: Special inspection by one regional based inspector (24 hours) of Security Plan: Physical Barriers (protected area); Physical Barriers (vital area); Assessment Aids; Detection Aids; Alarm Stations and confirmation of actions taken to correct items of noncompliance reflected in Inspection Report 50/272/80-02. No items of noncompliance were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION SECTION 6.8.1 REQUIRES THAT WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED. PROCEDURE S-VII 1.4, REVISION 5, APRIL 1979, "ENTERING AND LEAVING STEAM GENERATORS," A) SECTION III B2 REQUIRES THAT AIRBORNE PARTICULATES AND IODINE LEVELS BE DETERMINED FOR EACH STEAM GENERATOR INVOLVED PRIOR TO ENTRY; AND B) SECTION III E2 REQUIRES THAT THE WORKER WHO ENTERS A STEAM GENERATOR STAND STILL AFTER EXITING AND THAT THE ASSIGNED RADIATION PROTECTION TECHNICIAN REMOVE ITEMS OF SPECIAL PROTECTIVE CLOTHING AND EQUIPMENT. CONTRARY TO A), ON APRIL 12, 1980 WORK INVOLVING ENTRY INTO STEAM GENERATORS "A", "B" AND "C" WAS PERFORMED AND AIRBORNE ACTIVITY SURVEYS WERE NOT PERFORMED FOR EACH GENERATOR INVOLVED; AND CONTRARY TO B), THE SPECIAL PROTECTIVE CLOTHING AND EQUIPMENT WAS REMOVED BY WORKERS OTHER THAN THE RADIATION PROTECTION TECHNICIAN ASSIGNED.
(8014 INFRACTION)

INSPECTION STATUS

SYSTEMS AND COMPONENT PROBLEMS:

Refueling outage commenced two days earlier than scheduled due to increase in primary to secondary (S/G tube) leakage (PNO-V-80-24).

+ Large number of tubes determined to need plugging (results of eddy current testing).

FACILITY ITEMS (PLANS AND PROCEDURES):

Refueling.

MANAGERIAL ITEMS

None.

PLANT STATUS:

Plant shut down for refueling outage.

LAST IE SITE INSPECTION DATE: 06/01-30/80+

INSPECTION REPORT NO: 50-206/80-19+

SUMMARY

INSPECTION SUMMARY

+ Inspection on March 31-April 3, 1980 (Report No. 50-206/80-10)
Areas Inspected: Routine, unannounced inspection of the licensee's advanced planning and preparation efforts related to the refueling outage; investigation of licensee action in connection with a possible item of noncompliance related to a shipment of spent resin; followup on IE Circular 80-03 concerning protection from toxic gas hazards; and followup to Licensee Event Report No. 80-09. The inspection involved 32 inspector hours onsite by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

+ Inspection on May 28-30, 1980 (Report No. 50-206/80-15)
Areas Inspected: Routine, announced inspection of steam generator eddy current inspection activities associated with IE Bulletin 79-13; and licensee action on outstanding items of noncompliance and unresolved items. The inspection involved 18 inspector hours onsite by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

+ Inspection on May 5-30, 1980 (Report No. 50-206/80-16)
Areas Inspected: Routine, resident inspection during long term shutdown; monthly surveillance observations; monthly maintenance observations; inspection of refueling activities; review of core power distribution limit procedures, shutdown margin procedures, and licensee responses to IE Bulletins; independent inspection; Licensee Event Reports; and followup on loss of salt water cooling event.

Results: Of the nine areas inspected, no items of noncompliance or deviations were found in seven areas. One item of noncompliance was found in one area (Deficiency - Failure to properly implement Operating Instruction S-3-1.3). One deviation was identified in one area (Failure to maintain adequate housekeeping and cleanliness control).

+ Inspection on May 19-30, 1980 (Report No. 50-206/80-17)
Report being prepared; to be reported next month.

+ Inspection of May 19-22, 1980 (Report No. 50-206/80-18)
Areas Inspected: Routine, unannounced inspection of fire protection modifications; surveillance of pipe support and restraint systems; IE Bulletin/Circular followup; and independent inspection effort. The inspection involved 23 inspector hours onsite by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

+ Inspection on June 1-30, 1980 (Report No. 50-206/80-19)
Report being prepared; to be reported next month.

+ Inspection on June 16-19, 1980 (Report No. 50-206/80-20)
Areas Inspected: Routine, unannounced inspection of major maintenance, major surveillance, IE Bulletin and Circular followup, and independent inspection effort. The inspection involved 24 inspector hours onsite by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

FAILURE TO ESTABLISH, MAINTAIN AND FOLLOW ADEQUATE WRITTEN PROCEDURES. 2.790 INFORMATION.
(8004 INFRACTION)

FAILURE TO PROPERLY SEARCH PERSONNEL 2.790 INFORMATION
(8004 INFRACTION)

FAILURE TO PROPERLY CONTROL ACCESS TO A VITAL AREA - 2.790D INFORMATION.
(8004 INFRACTION)

FAILURE TO MAINTAIN A VITAL AREA BARRIER AS COMMITTED TO IN THE SECURITY PLAN. 2.790 INFORMATION.
(8004 INFRACTION)

AS REQUIRED BY 10 CFR 20.103(C) "WHEN RESPIRATORY PROTECTIVE EQUIPMENT IS USED TO LIMIT THE INHALATION OF AIRBORNE RADIOACTIVE MATERIAL PURSUANT TO PARAGRAPH (B)([illegible]) OF THIS SECTION, THE LICENSEE MAY MAKE ALLOWANCES FOR SUCH USE IN ESTIMATING EXPOSURES OF INDIVIDUALS TO SUCH MATERIALS PROVIDED THAT SUCH EQUIPMENT IS USED AS STIPULATED IN REGULATORY GUIDE 8.15, "ACCEPTABLE PROGRAMS FOR RESPIRATORY PROTECTION"." SECTION C.8.A OF REGULATORY GUIDE REQUIRES "RESPERIBLE AIR OF APPROVED QUALITY BE PROVIDED" IN ACCORDANCE WITH "COMMODITY SPECIFICATION FOR AIR", G--7.1-1966, WHICH IN SECTION 2.3, ENTITLED QUALITY TESTS FOR GRADE D AIR REQUIRES TEST FOR OXYGEN, HYDROCARBONS, CARBON MONOXIDE AND CARBON DIOXIDE. PROCEDURE HP-62, REVISION 2, DOES NOT PROVIDE FOR THE SAMPLING OR TESTING OF THE BREATHING AIR SUPPLY FOR OXYGEN, CONDENSED HYDROCARBONS OR CARBON DIOXIDE CONTENT AND THE SYSTEM WAS BEING USED WITHOUT THIS SAMPLING.
(8006 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4.1, A RETRAINING AND REPLACEMENT TRAINING PROGRAM FOR THE FACILITY STAFF SHALL BE MAINTAINED UNDER THE DIRECTION OF THE TRAINING SUPERVISOR AND SHALL MEET OR EXCEED THE REQUIREMENTS AND RECOMMENDATIONS OF SECTIONS 5.5 OF ANSI N18.1-1971 AND APPENDIX "A" OF 10 CFR PART 55. SECTION 5.5 OF ANSI N18.1-1971 STATES THAT A TRAINING PROGRAM SHALL BE ESTABLISHED WHICH MAINTAINS THE PROFICIENCY OF THE OPERATING ORGANIZATION. THE LICENSEE DID NOT HAVE AN ADEQUATE RETRAINING PROGRAM WHICH MAINTAINED THE PROFICIENCY OF THE HEALTH PHYSICS STAFF, NOR DID THE LICENSEE HAVE A TRAINING PROGRAM FOR REPLACEMENT PERSONNEL ON THE HEALTH PHYSICS STAFF IN THAT THE BASIC ELEMENTS LISTED IN ANSI N18.1-1971 SECTION 5.5.1 WERE NOT CONTAINED IN THE PROGRAM.
(8006 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.9, PROCEDURES FOR PERSONNEL RADIATION PROTECTION SHALL BE PREPARED CONSISTENT WITH THE REQUIREMENTS OF 10 CFR PART 20 AND SHALL BE APPROVED, MAINTAINED AND ADHERED TO FOR ALL OPERATIONS INVOLVING PERSONNEL RADIATION EXPOSURE. PROCEDURE HP-30, REVISION 7, PARAGRAPH 8.3.6 REQUIRES THAT THE PLASTIC BAG HOLDING THE DOSIMETRY, THERMOLUMINESENT DOSIMETER (TLD) AND NEUTRON TLD BE TAPED TO THE FRONT OF THE UPPER TORSO AND PARAGRAPH 4.3 OF THE HEALTH PHYSICS MANUAL REQUIRES DOSIMETRY TO BE WORN ON THE FRONT SIDEOF THE UPPER THUNK. DURING THE PERIOD OF INSPECTION, NUMEROUS INSTANCES OF IMPROPER WEARING OF DOSIMETERS WERE OBSERVED. EXAMPLES INCLUDED TLD'S CLIPPED ON BELTS AT THE HIP SIDE, TLD'S SHIELDED BY POCKET DOSIMETER AND TLD'S TURNED BACKWARDS.
(8006 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1 WRITTEN PROCEDURES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED COVERING THE ACTIVITIES RECOMMENDED IN APPENDIX A OF REGULATORY GUIDE 1.33, NOVEMBER 1972. REGULATORY GUIDE 1.33, APPENDIX A, SECTION [illegible](C) STATES THAT WRITTEN PROCEDURES FOR SURVEYS AND MONITORING SHOULD BE PREPARED. PLANT PROCEDURE HP-41 STATES, IN PART, THAT IF AN ITEM IS TO BE REMOVED AS AN UNCONDITIONAL RELEASE FROM THE RADIATION CONTROL AREA, HEALTH PHYSICS SHALL ASCERTAIN THAT THE ITEM MEETS THE CRITERIA DESCRIBED IN PLANT PROCEDURE HP-71, PARAGRAPH 4.3.2. PROCEDURE HP-71, PARAGRAPH 4.3.2 STATES THAT THE RELEASE LIMIT FOR UNCONTROLLED MATERIAL LEAVING THE RCA IS 100 COUNTS PER MINUTE PER PROBE AREA (BETA-GAMMA) USING THE RM-14/HP-210 INSTRUMENT (APPROXIMATELY EQUIVALENT TO 1,000 DPM/PROBE AREA) AND NO DETECTABLE REMOVABLE CONTAMINATION. DURING THE INSPECTION A WRENCH WAS FOUND IN THE CLEAN TOOL ROOM LOCATED OUTSIDE THE RADIATION CONTROL AREA, WHICH WHEN TESTED WAS OBSERVED TO BE CONTAMINATED TO 50,000 DPM PER PROBE AREA.
(8006 INFRACTION)

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT

* LAST IE SITE INSPECTION DATE: JUNE 17-20, 1980

* INSPECTION REPORT NO: 50-335/80-18

SUMMARY

INSPECTION SUMMARY

* INSPECTION MARCH 10-21 (80-06): THIS SPECIAL ANNOUNCED INSPECTION INVOLVED 487 INSPECTOR-HOURS ON SITE IN THE AREA OF HEALTH PHYSICS APPRAISAL INCLUDING ORGANIZATION, QUALIFICATIONS, TRAINING PROCEDURES, ALARM PROGRAMS, EXTERNAL EXPOSURE CONTROL, PERSONNEL DOSIMETER PROGRAM, INTERNAL DOSIMETRY, RESPIRATORY PROTECTION, MEDICAL EMERGENCIES, INSTRUMENTATION, SURVEILLANCE AND ACCESS CONTROL, RADWASTE CONTROL, FACILITIES AND EQUIPMENT, RE-ENTRY, AND IN-PLANT SYSTEMS. OF THE 16 AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN 12 AREAS; 4 ITEMS OF NONCOMPLIANCE WERE FOUND IN 4 AREAS (INFRACTION - FAILURE TO HAVE A RETRAINING PROGRAM; INFRACTION - FAILURE TO FOLLOW PROCEDURES; INFRACTION - FAILURE TO TAKE ADEQUATE SAMPLES OF BREATHING AIR; AND INFRACTION - CONTAMINATED TOOL CONTROL).

INSPECTION APRIL 10 - MAY 14 (80-15): THIS UNANNOUNCED INVESTIGATION INVOLVED 30 INSPECTOR-HOURS ON SITE IN THE AREAS OF MAINSTEAM AND ELECTRICAL PENETRATIONS; SAFETY INJECTION VALVES. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION APRIL 29 - MAY 2 (80-12): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 21 INSPECTOR-HOURS ON SITE IN THE AREAS OF SURVEILLANCE ACTIVITY ON PIPE SUPPORT AND RESTRAINT SYSTEMS, INCLUDING EXAMINATION OF PROCEDURE TEST RESULTS AND INSTALLED RESTRAINTS, AND EXAMINATION OF RECORDS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JUNE 3-5 (80-16): ON MAY 22, 1980, ALLEGATIONS RELATIVE TO INADEQUATE PHYSICAL SECURITY AND POOR HEALTH PHYSICS CONTROL WERE TELEPHONICALLY RECEIVED BY THE U.S.N.R.C., ATLANTA REGIONAL OFFICE, FROM AN INDIVIDUAL WHO DESIRES CONFIDENTIALITY. ON JUNE 3, 1980,

INSPECTORS INTERVIEWED THIS INDIVIDUAL, INSPECTED THE FACILITY, EXAMINED DOCUMENTATION, AND CONDUCTED INTERVIEWS OF OTHER PLANT PERSONNEL, ENDING THE EFFORT ON JUNE 5, 1980. THE FIVE SPECIFIC ALLEGATIONS WERE UNSUBSTANTIATED. THERE WERE NO ITEMS OF NONCOMPLIANCE.

INSPECTION JUNE 9-10 (80-19): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED TEN INSPECTOR-HOURS ON SITE IN THE AREAS OF FOLLOWUP ON IE BULLETINS AND FOLLOWUP ON PREVIOUS INSPECTION FINDINGS. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

THE REQUIREMENTS OF RRR (RECOMMENDED REQUIREMENTS FOR THE RESTART OF TMI, UNIT 1) IMPOSTED BY NRC-NRR IN ADDITION TO THE LICENSEES QA PROGRAM, IS NOT BEING INCORPORATED OR REFERENCED IN THE LICENSEES IMPLEMENTING INSTRUCTIONS/PROCEDURES INCLUDING ENGINEERING TASKS ASSIGNED THE A-E.
(8005 DEVIATION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS:

The plant remains shutdown, by NRC Order, pending completion of modifications and other actions related to the TMI-2 accident.

+ LAST IE SITE INSPECTION DATE: 6/27/80

+ INSPECTION REPORT NO: 50-289/80-17

SUMMARY

INSPECTION SUMMARY

+ 50-289/80-05 - Feb 27-29: Special, announced inspection by two regional based inspectors (49 hours) of the Quality Assurance Program implementation in the areas of Design Changes/Modifications; Procurement; and, Unit 1 Restart Program. A deviation was identified: Failure to incorporate recommended restart requirements into established Engineering Department procedures.

+ 50-289/80-09 - Apr 1 - May 8: Routine, unannounced inspection by six regional based inspectors (188 hours) of work activities and records associated with the Unit 1 Restart Program, including: inservice inspection observations; ISI evaluation and documentation; pressurizer heaters emergency power supply (task RM-16); tendon surveillance program; hydrogen recombiner (task RM-12); fire protection (task NM-48); engineering design; and, identification of safety-related ECMs. No items of noncompliance were identified.

+ 50-289/80-11 - Apr 28 - May 2: Special, announced inspection by one regional based inspector (35 hours) of the Quality Assurance Program implementation in the areas of Design Changes/Modifications; Audits; QA/QC Surveillance; and the Unit 1 Restart Program. No items of noncompliance were identified.

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

SYSTEMS AND COMPONENT PROBLEMS:

Resolution of questions regarding concrete block walls is required prior to startup.

FACILITY ITEMS (PLANS AND PROCEDURES):

None.

MANAGERIAL ITEMS:

None.

PLANT STATUS

♦ The plant commenced a refueling and maintenance outage on April 11, 1980. Startup is scheduled for mid-July 1980.

LAST IE SITE INSPECTION DATE: 06/01-30/80+

INSPECTION REPORT NO: 50-344/80-14+

SUMMARY

INSPECTION SUMMARY:

♦ Inspection on April 8-11, 16-18 & May 6-9, 1980 (Report No. 50-344/80-08)
Areas Inspected: Routine, announced inspection by Regional based inspectors of inservice inspection activities; maintenance activities related to pressurizer code safety valves; preparations for the control building wall modifications; and activities performed in response to IE Bulletin 79-01B. The inspection involved 114 inspector hours onsite by four NRC inspectors.

Results: No items of noncompliance or deviations were identified.

♦ Inspection on May 1-30, 1980 (Report No. 50-344/80-11)
Areas Inspected: Routine inspections of plant operations; maintenance; surveillance testing; physical security; refueling; modifications; environmental protection; and followup on Licensee Event Reports. The inspection involved 177 inspector hours onsite by the NRC Resident Inspector.

Results: Two items of noncompliance were found (Infraction - Failure to properly review and approve a safety-related test procedure; Deficiency - No record of certification available for individuals performing safety-related tests. No deviations were found.

♦ Inspection on May 14-16, 1980 (Report No. 50-344/80-12)
Areas Inspected: Routine, unannounced inspection of response to IE Bulletins and Circulars and followup on previous inspection items. Inspection also included independent inspection effort. The inspection involved 15 inspector hours onsite by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

♦ Inspection on June 10-11, 1980 (Report No. 50-344/80-13)
Areas Inspected: Special announced inspection of the circumstances surrounding and corrective actions taken by the licensee as a consequence of Licensee Event Report 80-07 and selected corrective actions taken by the licensee as a consequence of recent findings related to Licensee Event Report 79-15. The inspection involved 24 inspector hours onsite by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

♦ Inspection on June 1-30, 1980 (Report No. 50-344/80-14)
Report being prepared; to be reported next month.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION XVI, AND TOPICAL QUALITY REQUIREMENT 16.0 OF THE TOPICAL QUALITY ASSURANCE REPORT NO. FPLTQAR 1-76, AS IMPLEMENTED IN PART BY PARAGRAPH 5.2.2.3 OF QUALITY PROCEDURE 16.1, CORRECTIVE ACTION FOR ITEMS OF NONCOMPLIANCE IDENTIFIED IN NRC INSPECTION REPORTS SHALL BE TRACKED BY THE PLANT. CONTRARY TO THE ABOVE, THE CORRECTIVE ACTION DESCRIBED IN YOUR DECEMBER 18, 1979 RESPONSE TO THE ITEM OF NONCOMPLIANCE DESCRIBED IN PARAGRAPH 7 OF REPORT 50-250/251/79-31 WAS NOT TRACKED BY THE PLANT THEREBY CONTRIBUTING TO THE LACK OF IMPLEMENTATION OF THE CORRECTIVE ACTION BY YOUR STATED DUE DATE.
(8016 INFRACTION)

AS STATED IN YOUR DECEMBER 18, 1979 RESPONSE TO THE ITEM OF NONCOMPLIANCE DESCRIBED IN PARAGRAPH 7 OF REPORT 50-250/251/79-31, A MAINTENANCE INSTRUCTION DETAILING THE OPERATION OF THE SELECT-A-TORQ MACHINE WOULD BE ISSUED AND FULL COMPLIANCE WOULD BE ACHIEVED PRIOR TO MARCH 15, 1980. CONTRARY TO THE ABOVE, THIS INSTRUCTION WAS NOT ISSUED UNTIL APRIL 25, 1980, SUBSEQUENT TO THE RESIDENT INSPECTOR'S FOLLOWUP IN THIS AREA.

SUMMARY

INSPECTION SUMMARY

♦ INSPECTION MAY 28-30 (80-19): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 15 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSTALLED EQUIPMENT REVIEW WITH RESPECT TO IE BULLETIN 79-01B. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION MAY 1-31 (80-21): THIS ROUTINE INSPECTION INVOLVED 60 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, MAINTENANCE PROCEDURES, LICENSEE EVENT REPORT FOLLOWUP, PLANT TOURS AND SURVEILLANCE OF SAFETY-RELATED SYSTEMS AND COMPONENTS. OF THE FIVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN 3 AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - INADEQUATE MAINTENANCE PROCEDURE).

INSPECTION JUNE 11-13 (80-22): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 5.5 INSPECTOR-HOURS ON SITE IN THE AREAS OF FOLLOWUP ON IE BULLETINS, AND FOLLOWUP ON PREVIOUS INSPECTION FINDINGS. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION XVI, AND TOPICAL QUALITY REQUIREMENT 16.0 OF THE TOPICAL QUALITY ASSURANCE REPORT NO. FPLTQAR 1-76, AS IMPLEMENTED IN PART BY PARAGRAPH 5.2.2.3 OF QUALITY PROCEDURE 16.1, CORRECTIVE ACTION FOR ITEMS OF NONCOMPLIANCE IDENTIFIED IN NRC INSPECTION REPORTS SHALL BE TRACKED BY THE PLANT. CONTRARY TO THE ABOVE, THE CORRECTIVE ACTION DESCRIBED IN YOUR DECEMBER 18, 1979 RESPONSE TO THE ITEM OF NONCOMPLIANCE DESCRIBED IN PARAGRAPH 7 OF REPORT 50-250/251/79-31 WAS NOT TRACKED BY THE PLANT THEREBY CONTRIBUTING TO THE LACK OF IMPLEMENTATION OF THE CORRECTIVE ACTION BY YOUR STATED DUE DATE.
(8014 INFRACTION)

AS STATED IN YOUR DECEMBER 18, 1979 RESPONSE TO THE ITEM OF NONCOMPLIANCE DESCRIBED IN PARAGRAPH 7 OF REPORT 50-250/251/79-31, A MAINTENANCE INSTRUCTION DETAILING THE OPERATION OF THE SELECT-A-TORQ MACHINE WOULD BE ISSUED AND FULL COMPLIANCE WOULD BE ACHIEVED PRIOR TO MARCH 15, 1980. CONTRARY TO THE ABOVE, THIS INSTRUCTION WAS NOT ISSUED UNTIL APRIL 25, 1980, SUBSEQUENT TO THE RESIDENT INSPECTOR'S FOLLOWUP IN THIS AREA.
(8014 DEVIATION)

INSPECTION STATUS

NONE.

PLANT STATUS:

PLANT OPERATING AT NEARLY FULL POWER.

+ LAST IE SITE INSPECTION DATE: JUNE 16-20, 1980

+ INSPECTION REPORT NO: 50-251/80-23

SUMMARY

INSPECTION SUMMARY

+ INSPECTION MAY 28-30 (80-19): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 15 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSTALLED EQUIPMENT REVIEW WITH RESPECT TO IE BULLETIN 79-01B. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JUNE 4-6 (80-20): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 8.5 INSPECTOR-HOURS ON SITE IN THE AREAS OF FIRE PROTECTION/PREVENTION. OF THE AREAS INSPECTED, ONE ITEM OF NONCOMPLIANCE WAS FOUND (INFRACTION - INADEQUATE FIRE BRIGADE TRAINING PROGRAM; AND ONE DEVIATION WAS FOUND, DEVIATION - FIRE PROTECTION ADMINISTRATIVE CONTROL PROCEDURES DO NOT MEET THE NRC GUIDELINES).

INSPECTION MAY 1-31 (80-21): THIS ROUTINE INSPECTION INVOLVED 60 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, MAINTENANCE PROCEDURES, LICENSEE EVENT REPORT FOLLOWUP, PLANT TOURS AND SURVEILLANCE OF SAFETY-RELATED SYSTEMS AND COMPONENTS. OF THE FIVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN 3 AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - INADEQUATE MAINTENANCE PROCEDURE).

INSPECTION JUNE 11-13 (80-22): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 5.5 INSPECTOR-HOURS ON SITE IN THE AREAS OF FOLLOWUP ON IE BULLETINS, AND FOLLOWUP ON PREVIOUS INSPECTION FINDINGS. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

REPORTS RECEIVED FROM LICENSEE

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 50, APPENDIX B & APPROVED TEST PROCEDURE, REACTOR POWER, REACTOR PRESSURE & ACCUMULATOR PRESSURE WERE NOT ENTERED ON DATA FORM VYOP4424.01 FOR SCRAM NO. 94 OF IV19/79. (8006 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- A routine drywell tour identified a bonnet leak on the "B" main feedwater inboard check valve. The plant was taken to cold shutdown for repairs.
- During routine return to power operations, Recirc M.G. "B" tripped as the operator was resetting relay targets for M.G. overcurrent sensing relays.
- The reactor automatically tripped from 89% power due to an indicated high level in the moisture separator drain tank. The cause was attributed to troubleshooting on the moisture separator emergency drain valve controls.

FACILITY ITEMS (PLANS AND PROCEDURES):

- Unit refueling outage scheduled to commence 9/26 is estimated to last approximately eight weeks.
- Vermont Yankee discharge permit renewal application is under review by the Vermont State Agency of Environmental Conservation. This permit authorizes VNPC to discharge controlled waste water from Vermont Yankee NPS into the Connecticut River.

MANAGERIAL ITEMS:

- A management meeting between the Region I staff and the licensee was held at the site on 6/27 to duscuss the result of the NRC's Systematic Licensee Performance Evaluation.
- A meeting between local public officials and NRC staff was conducted on 6/27 for the purpose of officially opening the Vermont Yankee Resident Inspector Office.

PLANT STATUS:

- Routine operations at rated power with plant cooling towers in service. Representative steam jet air ejector and stack release rates are 3300 uc/sec and less than 100 uc/sec, respectively.

LAST IE SITE INSPECTION DATE: 5/23/80

INSPECTION REPORT NO: 50-271/80-08

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-017/03L	04/24/80	05/23/80	PCIS valve FSO-109-76B failed to close during TS required quarterly test due to dirt buildup on valve plunger assembly
80-019/01T	05/16/80	05/30/80	Both advanced off gas system radiation monitors taken off line for 10 minutes to help evaluate temperature anomaly in AOG system

SUMMARY

INSPECTION SUMMARY

- 50-271/80-06 - Apr 28 - May 1: Routine unannounced inspection by one regional based inspector (31 hours) of plant staff training, requalification training for licensed operators, craft and technician training, and post refueling startup testing. One item of noncompliance was identified: Failure to record test data completely.
- 50-271/80-07 - May 19-23: Routine unannounced inspection by one regional based inspector (26 hours) of the plant Fire Protection/Prevention Program, including: implementation of administrative procedures; fire brigade training; observation of ignition source and combustible materials control; review and observation of plant modifications; inspection of critical plant areas identified in T.I. 2515/19; and, review of actions taken on previous inspection findings. No items of noncompliance were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

T.S. 3.5.1 REQUIRES A LOW PRESSURE SAFETY INJECTION ACCUMULATOR TO BE OPERABLE IN MODES 1, 2, 3, 4, 5 WHEN MAIN COOLANT PRESSURE IS GREATER THAN 1000#. DURING THE PERIOD NOVEMBER 4, 1979 TO JANUARY 19, 1980 YANKEE ROWE OPERATED WITH AN INOPERABLE ACCUMULATOR.
(8002 VIOLATION)

T/S 6.8.1 REQUIRES WRITTEN PROCEDURES TO BE ESTABLISHED, IMPLEMENTED AND MAINTAINED. YANKEE ROWE FAILED TO FOLLOW PROCEDURES IN THAT (1) SWITCHING AND TAGGING ORDER FORMS WERE NOT CHECKED OR REPORTED CLEAR AS REQUIRED BY IN-PLANT TAGGING PROCEDURES. (2) JUMPER CONTROL REQUEST FORMS WERE NOT MAINTAINED AS REQUIRED BY AP-0018 "BYPASS OF SAFETY FUNCTION AND JUMPER CONTROL."
(*902 DEFICIENCY)

SUMMARY

INSPECTION SUMMARY

- Inspection on April 21; May 15-20, and 30-31, (80-08): Special inspection of Bergen-Paterson large bore hydraulic snubbers installed on Unit 2 steam generators. The inspection involved 60 inspectors onsite by one NRC inspector. No items of noncompliance or deviations were identified.

- Inspection on May 12-15 and 19-20, (80-09): Included a review of the Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization, and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measure; Power Supply; Response; Locks, Keys and Combinations; Records and Reports; Licensee Action of Previous Inspection Findings; and Independent Inspection Effort. The inspection involved 103.5 inspector hours onsite by three NRC inspectors. The inspection began during the day shift; 22.0 inspection hours were accomplished during offshift periods. One unit of the plant is currently in a refueling outage. The licensee was found to be in compliance with NRC requirements within 20 areas examined during the inspection except for the following 5 items: Access Control (Identification, Authorization, and Badging) - The licensee did not conduct proper personnel screening in accordance with security plan commitments; Access Control (Vital Areas) - Several vital area doors were found unsecured and unattended; Access Control (Search) - The licensee failed to properly search several individuals and one vehicle prior to their entry into the protected area; Testing and Maintenance - The licensee failed to test several segments of an alarm system; and Communications - The licensee failed to adequately protect one communication system. As a result of Items 1 and 2 noted above, an Immediate Action Letter was issued to the licensee on May 23, 1980.

- Inspection on May 13-14, (80-10): Special, announced inspection of utility management and technical competence in the areas of: offsite staff; resources amoung utilities; organization arrangement for normal and accident situations; training and requalification of offsite staff; financial capability; emergency procedures; reporting of unusual events and management involvement; and overtime restrictions. The inspection involved 63 inspector hours at the corporate office by four RIII inspectors and three NRR personnel. No items of noncompliance or deviations were identified.

Inspection on May 27-29, (80-11): Routine, unannounced inspection of environmental protection of Unit 1 including: administrative and procedural controls; licensee internal audits; implementation and results of the radiological and nonradiological environmental monitoring programs; review of meteorological program; review of corrective actions from a previous inspection; review of licensee environmental event reports; and quality assurance/quality control of confirmatory measurements program for the nonradiological chemistry program. The inspection involved 13 inspector hours onsite by one NRC inspector. Of the six areas inspected, no apparent items of noncompliance or deviations were found in four areas; one apparent item of noncompliance was identified in one area (excess pH of waste water released to the environment) and three apparent items of noncompliance in a second area (failure to standardize sodium hydroxide solution during boric acid titration; failure to conduct the required action conductivity measurements; and failure to provide documentation for gas bottle surveillance).

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-22/ 03L-0	05/07/80	06/06/80	The output signal from RC narrow range RTD, 1TE-421A intermittently spiking low.
80-23/ 01T-0	05/23/80	06/[illegible]/80	Discovery of existing charging pump 10 CFR Part 21 concern through Westinghouse generic notification and Zion site specific evaluation.
80-24/ 03L-0	05/15/80	06/13/80	During power operation while performing PT-10, 1A service water pump failed to start from train A of Safeguards.
80-25/ 03L-0	05/10/80	06/09/80	While performing periodic tests, maintenance personnel found function generator 1NM-441B output out of tolerance low 2.3%.
80-27/ 01T-0	06/01/80	06/12/80	While in cold shutdown testing of Unit 2 steam generator snubbers indicated that bleedrates under rated load were consistently lower than minimum of 0.116 in/min.

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENTS

- The steam generator seismic snubbers have been tested and are being modified during the outage.

FACILITY ITEMS

- A successful integrated leak rate test was completed during this refueling outage.

MANAGERIAL ITEMS

- Mr. N. Wandke, Station Superintendent, has been assigned to Purchasing. Mr. K. Graesser, has been assigned to replace Mr. Wandke as Zion Station Superintendent. Mr. K. Kofron, has replaced Mr. E. Murach as Assistant Superintendent of Maintenance. (80-07)
- D. Howard has become the new Rad-Chem Supervisor responsible to G. Plime, Administrative Assistant to the Plant Superintendent. (80-11)

PLANT STATUS

- Unit began a routine refueling outage on May 2, 1980. The outage has been extended from 56 to 69 days due to additional seismic rework as a result of IE Bulletin 79-14, and repairs to the low pressure turbine.

+LAST IE SITE INSPECTION DATE: May 27-29, 1980

+ INSPECTION REPORT NO: 80-11

SUMMARY

INSPECTION SUMMARY

- Inspection on April 29-30; May 19-21; and June 3-4, (80-07): Review of the ISI program and procedures for this refueling outage, observation of ISI examination activities, and review of examination results. The inspection involved 51 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.
- Inspection on April 21; May 15-20, and 30-31, (80-08): Special inspection of Bergen-Paterson large bore hydraulic snubbers installed on Unit 2 steam generators. The inspection involved 60 inspectors onsite by one NRC inspector. No items of noncompliance or deviations were identified.
- Inspection on May 12-15 and 19-20, (80-09): Included a review of the Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization, and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measure; Power Supply; Response; Locks, Keys and Combinations; Records and Reports; Licensee Action of Previous Inspection Findings; and Independent Inspection Effort. The inspection involved 103.5 inspector hours onsite by three NRC inspectors. The inspection began during the day shift; 22.0 inspection hours were accomplished during offshift periods. One unit of the plant is currently in a refueling outage. The licensee was found to be in compliance with NRC requirements within 20 areas examined during the inspection except for the following 5 items: Access Control (Identification, Authorization, and Badging) - The licensee did not conduct proper personnel screening in accordance with security plan commitments; Access Control (Vital Areas) - Several vital area doors were found unsecured and unattended; Access Control (Search) - The licensee failed to properly search several individuals and one vehicle prior to their entry into the protected area; Testing and Maintenance - The licensee failed to test several segments of an alarm system; and Communications - The licensee failed to adequately protect one communication system. As a result of Items 1 and 2 noted above, an Immediate Action Letter was issued to the licensee on May 23, 1980.

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-19/ 03L-0	04/29/80	05/27/80	During Safeguards Actuation Test, 2A containment spray pump stop valve 2MOV-CS0002 failed to open.
80-20/ 03L-0	05/07/80	06/03/80	During refuel. maintenance, S/G 2A pres. channel was found low by 2.6% exceeding channel accuracy (plus or minus 2%).

- Inspection on May 13-14, (80-10): Special, announced inspection of utility management and technical competence in the areas of: offsite staff; resources amoung utilities; organization arrangement for normal and accident situations; training and requalification of offsite staff; financial capability; emergency procedures; reporting of unusual events and management involvement; and overtime restrictions. The inspection involved 63 inspector hours at the corporate office by four RIII inspectors and three NRR personnel. No items of noncompliance or deviations were identified.
- Inspection on May 27-29, (80-11): Routine, unannounced inspection of environmental protection of Unit 2 including: administrative and procedural controls; licensee internal audits; implementation and results of the radiological and nonradiological environmental monitoring programs; review of meteorological program; review of corrective actions from a previous inspection; review of licensee environmental event reports; and quality assurance/quality control of confirmatory measurements program for the nonradiological chemistry program. The inspection involved 18 inspector hours onsite by one NRC inspector. Of the six areas inspected, no apparent items of noncompliance or deviations were found in four areas; one apparent item of noncompliance was identified in one area (excess pH of waste water released to the environment) and three apparent items of noncompliance in a second area (failure to standardize sodium hydroxide solution during boric acid titration; failure to conduct the required action conductivity measurements; and failure to provide documentation for gas bottle surveillance).

III. Independent Spent Fuel Storage Installations (h)							
Morris Operations		750 MTU (j)	315	385 MTU (j)	1490 MTU (j)		
NFS(i)		250 MTU	170 MTU	80 MTU			

(a) At each refueling outage approximately 1/3 of a PWR core and 1/4 of a BWR core is off-loaded.
(b) Some of these dates have been adjusted by staff assumptions.
(c) This is the total for both units.
(d) Plant not in commercial operation.
(e) Some spent fuel stored at Brunswick.
(f) Authorized a total 2088 BWR and 304 PWR assemblies for both pools.
(g) Robinson 2 assemblies being shipped to Brunswick for storage.
(h) Capacity is in metric tons of uranium; 1 MTU = 2 PWR assemblies or 5 BWR assemblies.
(i) No longer accepting spent fuel.
(j) Racked for 700 MTU.
(k) Reserved
(l) This is the station total.

N/S = Not Scheduled

REACTOR-YEARS OF EXPERIENCE

AS OF 6-30-80

The total of Reactor years of experience is as the sum of all calendar days for each unit, from the date that electricity was first generated until a final shutdown date or the status date, whichever comes first, divided by 365.25 days/year.

If a date is unknown, the first day of the first month of operation is substituted. Units which have not yet generated electricity but which are licensed are listed but not included in the computation.

LICENSED OPERATING ELECTRICAL PRODUCING UNITS

UNIT NAME	FIRST ELEC. GENERATION	YEARS EXPERIENCE
ARKANSAS 1	08/31/74	5.92
ARKANSAS 2	12/26/78	1.51
BEAVER VALLEY 1	06/14/76	4.05

LICENSED OPERATING REACTORS

AUTHORIZATION AND CLEARANCE

THE U.S. NUCLEAR REGULATORY COMMISSION'S OFFICE OF MANAGEMENT AND PROGRAM ANALYSIS PUBLISHES THIS MONTHLY STATUS REPORT "AS PART OF THE REPORTING REQUIREMENTS IN SECTION 50.36 OF 10 CFR PART 50 UNDER GAO CLEARANCE NUMBER B-180225, WITH AN EXPIRATION DATE OF SEPTEMBER 30, 1981," AS STATED IN THE OCTOBER 3, 1978 LETTER FROM JOHN M. LOVELADY, ASSISTANT DIRECTOR, GENERAL GOVERNMENT DIVISION, U. S. GENERAL ACCOUNTING OFFICE, TO J.M. FELTON, DIRECTOR, DIVISION OF RULES AND RECORDS, U.S. NUCLEAR REGULATORY COMMISSION.

STATEMENT OF PURPOSE

The U. S. Nuclear Regulatory Commission's monthly OPERATING UNITS STATUS REPORT — LICENSED OPERATING REACTORS, provides data on the operation of nuclear units as timely and accurately as possible. This information is collected by the Office of Management and Program Analysis from the Headquarters Staff of NRC's Office of Inspection and Enforcement, from NRC's Regional Offices, and from utilities. Since all of the data concerning operation of the units is provided by the utility operators less than two weeks after the end of the month, necessary corrections to published information are shown on the ERRATA page.

This report is divided into three sections: the first contains monthly highlights and statistics for commercial operating units, and errata from previously reported data; the second is a compilation of detailed information on each unit, provided by NRC Regional Offices, IE Headquarters and the Utilities; and the third section is an appendix for miscellaneous information such as spent fuel storage capability, reactor-years of experience and non-power reactors in the United States.

The percentage computations, Items 19 through 24 in Section 2, the vendor capacity factors on page 1-4, and actual vs. potential energy production on Page 1-2 are computed from actual power production from the period of consideration. The percentages listed in power generation on Page 1-2 are computed as an arithmetical average. The factors for the life-span of each unit (the "Cumulative" column) are reported by the utility and are not entirely re-computed by NRC. Utility power production data is checked for consistency with previously submitted statistics.

In some cases, the numbers in the "Cumulative" column may have been totaled from a date that is different from the date of commercial operation. In these cases, the column is noted with an explanation of the nature of the change on each individual plant page in Section 2.

It is hoped this status report proves informative and helpful to all agencies and individuals interested in analyzing trends in the nuclear industry which might have safety implications, or in maintaining an awareness of the U. S. energy situation as a whole.

TABLE OF CONTENTS

GLOSSARY ii
INDEX TO LICENSED UNITS iii

SECTION 1 – CURRENT DATA SUMMARIES

MONTHLY HIGHLIGHTS OF COMMERCIAL NUCLEAR POWER UNITS 1-2

- Licensed Power Reactors 1-2
- Power Generation 1-2
- Actual vs. Potential Energy Production 1-2
- Outage Data 1-2
- Derated Units 1-2
- Shutdowns - Number and Reasons 1-3
- Unit Availability, Capacity, and Forced Outage Rate 1-3
- Refueling Schedule 1-3

AVERAGE CAPACITY FACTORS BY VENDOR 1-4

AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIAL OPERATING UNITS 1-5

ERRATA 1-7

SECTION 2 – OPERATING POWER REACTORS

ARKANSAS 1 THROUGH ZION 2 PAGES A–2 TO Z–5

- Facility Data
- Inspection and Enforcement Status
- Reports Received from Licensee
- Operating Status
- Average Daily Power Level (MWe)
- Unit Shutdowns/Reductions

SECTION 3 – APPENDIX

STATUS OF SPENT FUEL STORAGE CAPABILITY 3-2
REACTOR-YEARS OF EXPERIENCE 3-3
NON-POWER REACTORS IN THE U.S. 3-4

GLOSSARY

AVERAGE DAILY POWER LEVEL (MWe)	The net electrical energy generated during the day (measured from 0001 to 2400 hours inclusive) in megawatts hours divided by 24 hours.
LICENSED THERMAL POWER (MWt)	The maximum thermal power of the reactor authorized by the NRC, expressed in megawatts.
DATE OF COMMERCIAL OPERATION	Date unit was declared by utility owner to be available for the regular production of electricity; usually related to satisfactory completion of qualification tests as specified in the purchase contract and to accounting policies and practices of utility.
DESIGN ELECTRICAL RATING (DER) (Net MWe)	The nominal net electrical output of the unit specified by the utility and used for the purpose of plant design.
FORCED OUTAGE	An outage required to be initiated no later than the weekend following discovery of an off-normal condition.
FORCED OUTAGE HOURS	The clock hours during the report period that a unit is unavailable due to forced outages.
GROSS ELECTRICAL ENERGY GENERATED (MWH)	Electrical output of the unit during the report period as measured at the output terminals of the turbine generator, in megawatts hours.
GROSS HOURS	The clock hours from the beginning of a specified situation until its end. For outage durations, the clock hours during which the unit is not in power production.
GROSS THERMAL ENERGY GENERATED (MWH)	The thermal energy produced by the unit during the report period as measured or computed by the licensee in megawatt hours.
HOURS GENERATOR ON-LINE	Also, "Unit Service Hours." The total clock hours in the report period during which the unit operated with breakers closed to the station bus. These hours added to the total outage hours experienced by the unit during the report period, shall equal the hours in the report period.
HOURS IN REPORTING PERIOD	For units in power ascension at the end of the period, the gross hours from the beginning of the period or the first electrical production, whichever comes last, to the end of the period. For units in commercial operation at the end of the period, the gross hours from the beginning of the period or of commercial operation, whichever comes last, to the end of the period or decommissioning, whichever comes first.
HOURS REACTOR CRITICAL	The total clock hours in the report period during which the reactor sustained a controlled chain reaction.
MAXIMUM DEPENDABLE CAPACITY (GROSS) (MDC Gross) (Gross MWe)	Dependable main-unit gross capacity, winter or summer, whichever is smaller. The dependable capacity varies because the unit efficiency varies during the year due to cooling water temperature variations. It is the gross electrical output as measured at the output terminals of the turbine generator during the most restrictive seasonal conditions (usually summer).
MAXIMUM DEPENDABLE CAPACITY (NET) (MDC Net) (Net MWe)	Maximum Dependable Capacity (Gross) less the normal station service loads.
NAMEPLATE RATING (Gross MWe)	The nameplate power designation of the generator in megavolt amperes (MVA) times the nameplate power factor of the generator. NOTE: The nameplate rating of the generator may not be indicative of the maximum or dependable capacity, since some other item of equipment of a lesser rating (e.g. , turbine) may limit unit output.
NET ELECTRICAL ENERGY GENERATED	Gross electrical output of the unit measured at the output terminals of the turbine generator during the reporting period, minus the normal station service electrical energy utilization. If this quantity is less than zero, a negative number should be recorded.
OUTAGE	A situation in which no electrical production takes place.
OUTAGE DATE	As reported on Appendix D of Reg. Guide 1.16, the date of the start of the outage. If continued from a previous month, report the same outage date but change "Method of Shutting Down Reactor" to "4 (Other)" and add a note: "Continued from previous month."
OUTAGE DURATION	The total clock hours of the outage measured from the beginning of the report period or the outage, whichever comes last, to the end of the report period or the outage, whichever comes first.
OUTAGE NUMBER	A number unique to the outage assigned by the licensee. The same number is reported each month in which the outage is in progress. One format is "76-05" for the fifth outage to occur in 1976.
PERIOD HOURS	See "Hours in Reporting Period."
POWER REDUCTION	A reduction in the Average Daily Power Level of more than 20% from the previous day. All power reductions are defined as outage of zero hours durations for the purpose of computing unit service and availability factors, and forced outage rate.
REACTOR AVAILABLE HOURS	The total clock hours in the report period during which the reactor was critical or was capable of being made critical. (Reactor Reserve Shutdown Hours + Hours Reactor Critical.)
REACTOR AVAILABILITY FACTOR	$\frac{\text{Reactor Available Hours} \times 100}{\text{Period Hours}}$
REACTOR RESERVE SHUTDOWN	The cessation of criticality in the reactor for administrative or other similar reasons when operation could have been continued.
REACTOR RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the reactor is in reserve shutdown mode. NOTE: No credit is given for NRC imposed shutdowns.
REACTOR SERVICE FACTOR	$\frac{\text{Hours Reactor Critical} \times 100}{\text{Period Hours}}$
REPORT PERIOD	Usually, the preceding calendar month. Can also be the preceding calendar year, (Year-to-Date), or the life-span of a unit (cumulative).
RESTRICTED POWER LEVEL	Maximum net electrical generation to which the unit is restricted during the report period due to the state of equipment, external conditions, administrative reasons, or a direction by NRC.
SCHEDULED OUTAGE	Planned removal of a unit from service for refueling, inspection, training, or maintenance. Those outages which do not fit the definition of "Forced Outage" perforce are "Scheduled Outages."
STARTUP AND POWER ASCENSION TEST PHASE	Period following initial criticality during which the unit is tested at successively higher levels, culminating with operation at full power for a sustained period and completion of warranty runs. Following this phase, the utility generally considers the unit to be available for commercial operation.
UNIT	The set of equipment uniquely associated with the reactor, including turbine generators, and ancillary equipment, considered as a single electrical energy production facility.
UNIT AVAILABLE HOURS	The total clock hours in the report period during which the unit operated on-line or was capable of such operation. (Unit Reserve Shutdown Hours + Hours Generator On-Line.)
UNIT AVAILABILITY FACTOR*	$\frac{\text{Unit Available Hours} \times 100}{\text{Period Hours}}$
UNIT CAPACITY FACTORS	
– Using Licensed Thermal Power	$\frac{\text{Gross Thermal Energy Generated} \times 100}{\text{Period Hours} \times \text{Lic. Thermal Power}}$
– Using Nameplate Rating	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{Nameplate Rating}}$
– Using DER	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{DER}}$
– Using MDC Gross	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Gross}}$
– Using MDC Net	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Net}}$

NOTE: if MDC Gross and/or MDC Net have not been determined, the DER is substituted for this quantity for Unit Capacity Factor calculations.

UNIT FORCED OUTAGE RATE	$\frac{\text{Forced Outage Hours}}{\text{Unit Service Hours} + \text{Forced Outage Hours}}$
UNIT RESERVE SHUTDOWN	The removal of the unit from on-line operation for economic or other similar reasons when operation could have been continued.
UNIT RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the unit was in reserve shutdown mode.
UNIT SERVICE FACTOR	$\frac{\text{Unit Service Hours} \times 100}{\text{Period Hours}}$
UNIT SERVICE HOURS	See "Hours Generator On-Line."

CFMDC	69.9	68.9	78.3	46.1	65.9

Capacity factor in this page, denoted as CFMDC, is a function of the net maximum dependable capacity. See the corresponding definition in the Glossary. The vendor averages are computed by the formula:

$$\frac{\text{Net Electrical Energy Produced by Vendor}}{\text{Potential Electrical Production By Vendor In This Month}} \times 100\%$$

Units Excluded	Reason for Exclusion
Dresden 1 Humboldt Bay Three Mile Island 2	Unit Shutdown Indefinitely
Big Rock Point	Not Representative of Typical BWRs
LaCrosse	Not Representative of Typical BWRs and Atypical Vendor
Fort St. Vrain	Atypical Vendor and Reactor Design

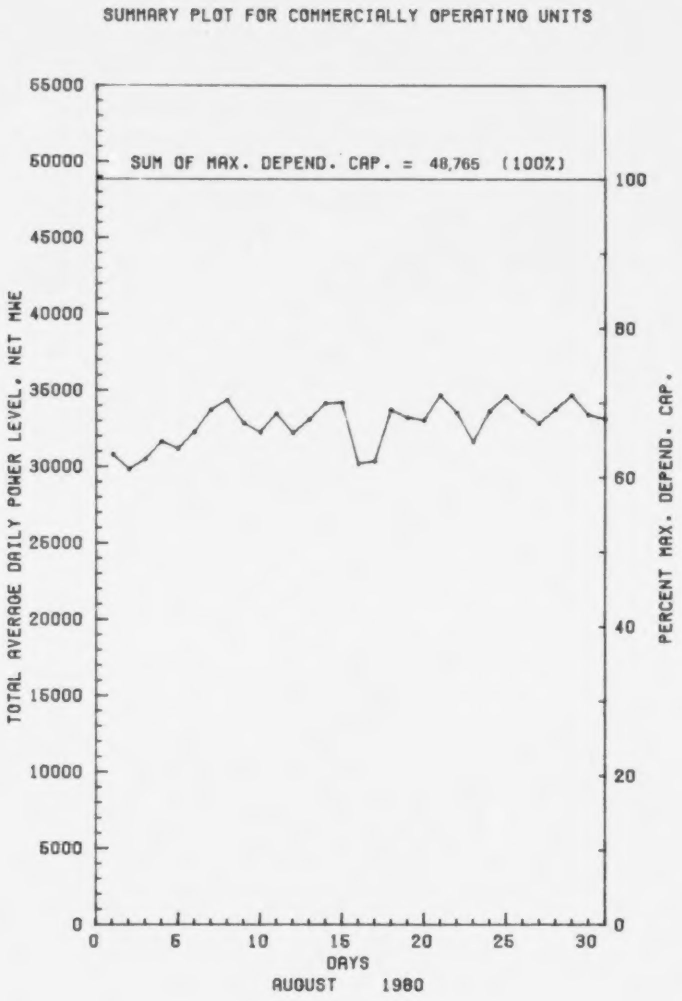
AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIALLY OPERATING UNITS

This chart depicts the average daily power level for the units in commercial operation during the month.

The straight line on the graph labelled "SUM OF MAX. DEPEND. CAP." is plotted at the value shown by summing the separate maximum dependable capacities of the commercially operating units (in Net MWe). The plot shown below the line is calculated by summing the separate average daily power levels of the commercially operating units for each day of the month.

The scale on the left vertical axis runs in 1,000 MWe increments from 0 to 55,000 MWe (Net). The right vertical axis shows the percentage in 10% increments, up to 100% of the "SUM OF MAX. DEPEND. CAP."

It should be recognized that the 100% line would be obtainable only if all of the commercially operating units operated at 100% capacity, 24 hours per day, for the entire month. In other words, since any power generator must occasionally shut down to refuel and/or perform needed maintenance, and also since 100% capacity production is not always required by power demands, the 100% line is a theoretical goal and not a practical one.



ERRATA

Corrections and Amendments to Previously-Reported Data

(NOTE: These changes are reflected in the data contained in the current report)

CORRECTIONS TO NUREG-0020 VOL. 4, NO. 8 AUGUST 1980

Page	Unit Name	Item	Correction
R 5	ROBINSON 2	16. GROSS THERMAL ENERGY (MWH)	THE ENTRY FOR THE MONTH OF JULY SHOULD HAVE BEEN 870,283. YEAR TO DATE AND CUMULATIVE TOTALS SHOULD HAVE BEEN 8,014,423 AND 128,564,761 MWH, RESPECTIVELY.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION V: BVPS FSAR, APPENDIX A.2, ATTACHMENT; ANSI N45.2.8, AND SAD 5 REQUIREMENTS FOR THE TEMPORARY USE OF SYSTEMS MODIFIED BY DCP 201/202 WERE NOT IMPLEMENTED DURING THE TURNOVER OF THE SYSTEM ON JANUARY 19, 1980 AND DURING SUBSEQUENT OPERATIONS THROUGH PLANT REFUELING.
(8009 INFRACTION)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION VI: BVPS FSAR, APPENDIX A.2.2.6; QQA PROCEDURE OP-6, REVISION 0; AND QA PROCEDURE OP-4, REVISION 6, DOCUMENT CONTROL MEASURES WERE INADEQUATELY IMPLEMENTED IN THAT: 1) CONTROLLED INFORMATION WAS NOT MADE AVAILABLE TO PERSONNEL AS REQUIRED TO SUPPORT PREPARATION OF PROCEDURE REQUIRING REVISION AS A RESULT OF DCP 201/202; 2) STATION AND CONTROL ROOM CONTROLLED DRAWING FILES CONTAINED OBSOLETE DRAWINGS SUPERSEDED BY THOSE ISSUED AS A RESULT OF DCP 201/202; 3) AS-BUILT DRAWINGS ISSUED AS A RESULT OF DCP 201/202 WERE NOT TRANSMITTED TO THE STATION NOR ENTERED INTO STATION FILES PRIOR TO THEIR FIRST NEED FOR SAFETY RELATED ACTIVITIES; AND, 4) WHEN ISSUED FOR USE, AS-BUILT DRAWINGS ISSUED AS A RESULT OF DCP 201/202 HAD NOT RECEIVED FINAL ENGINEERING CHECKING.
(8009 INFRACTION)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION XII: BVPS FSAR, APPENDIX A.2.2.12; AND, QA PROCEDURE OP-12, REVISION 3, SECTION 12.2.1, MEASURES FOR THE CONTROL AND CALIBRATION OF MEASUREMENT AND TEST EQUIPMENT WERE INADEQUATELY ESTABLISHED AND IMPLEMENTED; IN THAT THE BVPS MAINTENANCE MANUAL, CHAPTER 1, SECTION F, REVISION 10, DID NOT PROVIDE REQUIREMENTS FOR DIAL INDICATORS. AN UNCONTROLLED AND UNCALIBRATED DIAL INDICATOR WAS USED ON MARCH 24, 1980 DURING PERFORMANCE OF SAFETY-RELATED MAINTENANCE ON CONTROL ROOM AIR CONDITIONING COMPRESSOR NO. 40.
(8009 DEFICIENCY)

CONTRARY TO TS 6.8.1.C AND TS 3/4.3.3.1, SURVEILLANCE TEST PROCEDURE FOR RADIATION MONITORS RM-VS-103A AND B AND RM-VS-104A AND B WERE INADEQUATELY IMPLEMENTED AND MAINTAINED, IN THAT: 1) OST 1.43.1, REVISION 5 AND OST 1.44.C1, REVISION 1, PERFORMED, JANUARY - APRIL 1980 HAD NOT BEEN REVISED TO REFLECT THE ACTUAL SYSTEM CONFIGURATIONS RESULTING FROM RECENT MODIFICATIONS AND DID NOT TEST ALL REQUIRED FUNCTIONS; 2) OST 1.43.1, REVISION 5, PERFORMED ON MARCH 9, 1980 DOCUMENTED THE TESTS OF RM-103A AS SATISFACTORY WITHOUT NOTING EITHER PROCEDURE OR SYSTEM DEFICIENCIES EVEN THOUGH THE PROCEDURE DID NOT REFLECT ACTUAL SYSTEM CONFIGURATION AT THE TIME OF TEST; 3) OST 1.43.1, REVISION 8, WAS NOT ISSUED IN A TECHNICALLY CORRECT FORM PRIOR TO ACTIVITIES WHICH REQUIRED ITS PERFORMANCE; AND, 4) OST 1.43.1, REVISION 8, AS ORIGINALLY ISSUED ON MARCH 31, 1980 WAS TECHNICALLY INCORRECT IN THAT IT DID NOT TEST THE OPERATION OF ALL DAMPER/RADIATION MONITOR TRIP FUNCTIONS MODIFIED BY DCP 201/202.
(8009 INFRACTION)

SECTION 5.5.1 OF THE ENVIRONMENTAL TECHNICAL SPECIFICATIONS (ETS) REQUIRES THAT DETAILED WRITTEN PROCEDURES...WILL BE PREPARED AND IMPLEMENTED FOR ALL ACTIVITIES INVOLVING RELEASES TO THE ENVIRONMENT, DESCRIBED IN SECTIONS 2.0 AND 3.0, THE SAMPLING AND MONITORING OF THESE RELEASES AND THE CONDUCT OF THE ENVIRONMENTAL SURVEILLANCE PROGRAM. THESE PROCEDURES WILL INCLUDE SAMPLING, INSTRUMENT CALIBRATION...TESTING AND CALIBRATION FREQUENCIES OF EFFLUENT ALARMS AND MONITORING INSTRUMENTS. SECTION 3.1.1 OF THE (ETS) REQUIRES, IN PART, THAT A CONTINUOUS TEMPERATURE SENSOR WITH AN ACCURACY OF PLUS OR MINUS 0.5 DEGREES F OVER A RANGE OF 25-125 DEGREES F SHALL BE USED AT THE DISCHARGE STRUCTURE TO MEASURE COOLING TOWER BLOWDOWN. IF THE SENSORS LOCATED ON THE INLET SIDE OF THE CONDENSER SHALL BE USED AS A BACKUP. THE ACCURACY OF THESE SENSORS SHALL BE PLUS OR MINUS 1.0 DEGREES F OR LESS. CONTRARY TO THE ABOVE REQUIREMENTS, AS OF JUNE 6, 1980, WRITTEN PROCEDURES HAD NOT BEEN PREPARED NOR IMPLEMENTED FOR THE CALIBRATION OF THE DISCHARGE TEMPERATURE MONITORING SYSTEM RESISTANCE TEMPERATURE DETECTORS (RTDS) NOR FOR THE CALIBRATION OF THE BACKUP TEMPERATURE MONITORING SYSTEM CONDENSER INLET RTDS.
(8015 INFRACTION)

SECTION 5.5.1 OF THE ENVIRONMENTAL TECHNICAL SPECIFICATIONS (ETS) REQUIRES THAT DETAILED WRITTEN PROCEDURES...WILL BE PREPARED AND IMPLEMENTED FOR ALL ACTIVITIES INVOLVING RELEASES TO THE ENVIRONMENT, DESCRIBED IN SECTIONS 2.0 AND 3.0, THE SAMPLING AND MONITORING OF THESE RELEASES AND THE CONDUCT OF THE ENVIRONMENTAL SURVEILLANCE PROGRAM. THESE PROCEDURES WILL INCLUDE SAMPLING, INSTRUMENT CALIBRATION...TESTING AND CALIBRATION FREQUENCIES OF EFFLUENT ALARMS AND MONITORING INSTRUMENTS. SECTION 3.1.1 OF THE (ETS) REQUIRES, IN PART, THAT A CONTINUOUS TEMPERATURE SENSOR WITH AN ACCURACY OF PLUS OR MINUS 0.5 DEGREES F OVER A RANGE OF 25-125 DEGREES F SHALL BE USED AT THE DISCHARGE STRUCTURE TO MEASURE COOLING TOWER BLOWDOWN. INSPECTION STATUS

SENSORS LOCATED ON THE INLET SIDE OF THE CONDENSER SHALL BE USED AS A BACKUP. THE ACCURACY OF THESE SENSORS SHALL BE PLUS OR MINUS 1.0 DEGREES F OR LESS. CONTRARY TO THE ABOVE REQUIREMENTS, AS OF JUNE 6, 1980, WRITTEN PROCEDURES HAD NOT BEEN PREPARED NOR IMPLEMENTED FOR THE CALIBRATION OF THE DISCHARGE TEMPERATURE MONITORING SYSTEM RESISTANCE TEMPERATURE DETECTORS (RTDS) NOR FOR THE CALIBRATION OF THE BACKUP TEMPERATURE MONITORING SYSTEM CONDENSER INLET RTDS.
(8015 INFRACTION)

CONTRARY TO 10 CFR 20.101, "RADIATION DOSE STANDARDS FOR INDIVIDUALS IN RESTRICTED AREAS", DURING THE FIRST CALENDAR QUARTER OF 1980, AN INDIVIDUAL WAS PERMITTED TO RECEIVE IN EXCESS OF 1.25 REM. THE PRESCRIBED FORM NRC-4 HAD NOT BEEN COMPLETED.
(8022 INFRACTION)

10 CFR 50, APPENDIX B, CRITERION IX, STATES, IN PART, THAT "...SPECIAL PROCESSES, INCLUDING...WELDING ARE CONTROLLED AND ACCOMPLISHED...IN ACCORDANCE WITH APPLICABLE CODES, STANDARDS, SPECIFICATIONS...." THE BEAVER VALLEY POWER STATION PSAR, SECTION 17, PARAGRAPH 17.2.1.9A, ALSO STATES, IN PART, THAT: "...THE DLC QAP ESTABLISHES MEASURES TO ASSURE THAT SPECIAL PROCESSES, INCLUDING WELDING...ARE CONTROLLED IN ACCORDANCE WITH APPLICABLE CODES, STANDARDS, SPECIFICATIONS...." DLC QA MANUAL IN QA PROCEDURE DC-9 (CONTROL OF SPECIAL PROCESSES), PARAGRAPH 9.4.2 STATES IN PART THAT "THE AE/CONSTRUCTOR AND NSS SUPPLIER ARE RESPONSIBLE FOR THE ESTABLISHMENT AND IMPLEMENTATION OF MEASURES FOR CONTROLLING SPECIAL PROCESSES...AND SHALL SUPPLY CONTRACTORS WITH PROCEDURES FOR CONTROLLING SPECIAL PROCESSES." STONE AND WEBSTER FIELD CONSTRUCTION PROCEDURE, FCP-601.5, PARAGRAPH 11.12, STATES, IN PART, "EACH WELDER SHALL BE RESPONSIBLE FOR ALL WELDING MATERIALS.... ALL ELECTRODE STUBS OR DAMAGED ELECTRODES SHALL BE RETAINED BY THE WELDER IN A SUITABLE CONTAINER (STUB BUCKET) FOR PROPER DISPOSAL AT THE ISSUE STATION." CONTRARY TO THE ABOVE, ON JUNE 3, 1980, APPROXIMATELY 25-40 WELDING ELECTRODE STUBS AND DAMAGED ELECTRODES HAD BEEN PLACED IN A LARGE TRASH CONTAINER WITHIN THE CONTAINMENT BUILDING. THIS ITEM IS AN INFRACTION.
(8006 INFRACTION)

10 CFR 50, APPENDIX B, CRITERION XIII, STATES, IN PART, "MEASURES SHALL BE ESTABLISHED TO CONTROL THE HANDLING, STORAGE, SHIPPING, CLEANING AND PRESERVATION OF MATERIAL AND EQUIPMENT...TO PREVENT DAMAGE OR DETERIORATION." THE BEAVER VALLEY POWER STATION UNIT 2, PSAR SECTION 17, PARAGRAPH 17.2.1.13A ALSO STATES, "THE DLC QAP ESTABLISHES MEASURES TO CONTROL THE HANDLING, STORAGE, SHIPPING, CLEANING AND PRESERVATION OF MATERIAL AND EQUIPMENT IN ACCORDANCE WITH WORK AND INSPECTION INSTRUCTIONS TO PREVENT DAMAGE OR DETERIORATION." DLC QA MANUAL IN QA PROCEDURE DC-13 (HANDLING, STORAGE AND SHIPPING), PARAGRAPH 13.3 STATES IN PART THAT "SPECIFIC PROCEDURES AND INSTRUCTIONS SHALL BE WRITTEN WHEN NECESSARY FOR THE PRESERVATION, PACKAGING AND STORAGE OF ITEMS. THE PROCEDURES AND INSTRUCTIONS SHALL BE UTILIZED TO ASSURE THAT ITEMS SUBJECTED TO DETERIORATION OR DAMAGE...ARE CLEANED AND HAVE NECESSARY PRESERVATIVES TO PREVENT DAMAGE." STONE AND WEBSTER FCP-11 ATTACHMENT 3.2 TO APPENDIX 1 INDIC ATES THAT VALVES ARE CLASSIFIED FOR STORAGE UNDER STORAGE LEVEL C. THE DOCUMENT STATES THAT FOR L EVEL C STORAGE "ITEMS SHALL BE STORED INDOORS OR EQUIVALENT WITH ALL PROVISIONS AND REQUIREMENTS A S STATED FOR LEVEL B ITEMS EXCEPT THAT HEAT AND TEMPERATURE CONTROLS ARE NOT REQUIRED." LEVEL B STATES "THE ITEMS SHALL BE STORED WITHIN A FIRE RESISTANT, TEAR RESISTANT, WEATHER TIGHT AND WELL VENTILATED BUILDING OR EQUIVALENT ENCLOSURE...." CONTRARY TO THE ABOVE, ON JUNE 3, 1980, THE VALVE 2-VV1-015-11-3, SERIAL NO. D-0021-3-2, WAS STORED IN AN OPEN BOX AT THE BOTTOM LEVEL OF THE CONTAINMENT BUILDING, EXPOSED TO THE WEATHER AND AS A RESULT SHOWED EVIDENCE OF WET CORROSION. THIS ITEM IS AN INFRACTION.
(8006 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS (PLANS AND PROCEDURES):

- Refueling/modification outage commenced 11/30/79; outage is expected to continue until at least 9/15/80.

PLANT STATUS:

- IN COLD SHUTDOWN. WORK CONTINUES ON BERGEN-PATTERSON LARGE BORE SNUBBERS, REFUELING WATER STORAGE TANK, QUENCH SPRAY SYSTEMS, PIPEHANGERS, SUPPORTS, BASE PLATES, LOW HEAD SI PUMPS, AND THE REACTOR COOLANT PUMP MOTOR THRUST RUNNER MODIFICATIONS. LOW PRESSURE TURBINE ROTOR INSTALLATION IS COMPLETED.

- LAST IE SITE INSPECTION DATE: 8/25-29/80

- INSPECTION REPORT NO: 50-334/80-24

SUMMARY

INSPECTION SUMMARY

- 50-334/80-15 - JUN 2-6: ROUTINE, UNANNOUNCED INSPECTION BY ONE REGION-BASED INSPECTOR (40 HRS) OF ENVIRONMENTAL MONITORING PROGRAMS FOR OPERATIONS INCLUDING: THE MANAGEMENT CONTROLS FOR THESE PROGRAMS; THE LICENSEE'S PROGRAM FOR QUALITY CONTROL OF ANALYTICAL MEASUREMENTS; IMPLEMENTATION OF THE ENVIRONMENTAL MONITORING PROGRAMS - RADIOLOGICAL; BIOLOGICAL/ECOLOGICAL; AND NONRADIOACTIVE EFFLUENT RELEASE RATES AND LIMITS. ONE ITEM OF NONCOMPLIANCE WAS IDENTIFIED: FAILURE TO HAVE COMPLETE DISCHARGE TEMPERATURE MONITORING SYSTEM CALIBRATION PROCEDURE.

- 50-334/80-21 - JUL 18: SPECIAL MANAGEMENT MEETING ATTENDED BY SENIOR LICENSEE AND REGIONAL MANAGEMENT TO DISCUSS NRC CONCERNS REGARDING LICENSEE IMPLEMENTATION OF ADMINISTRATIVE CONTROLS, LICENSEE ACTION TAKEN IN RESPONSE TO RECENT INCIDENTS INVOLVING OUTAGE RECOVERY ACTIVITIES AND PLANT STAFF WORK HOURS.

- 50-334 - JUL 28 - AUG 1: ROUTINE, UNANNOUNCED INSPECTION BY A REGION-BASED INSPECTOR (38 HRS) OF THE RADIATION PROTECTION PROGRAM DURING THE REFUELING OUTAGE INCLUDING: ADVANCED PLANNING AND PREPARATION; TRAINING; EXPOSURE CONTROL; RESPIRATORY PROTECTION PROGRAM; POSTING, LABELING, AND CONTROL; SURVEYS; AND PLANT TOURS. LICENSEE ACTIONS ON PREVIOUS INSPECTION FINDINGS WERE REVIEWED, AND AREAS WHERE WORK WAS BEING CONDUCTED WERE EXAMINED TO REVIEW RADIOLOGICAL PROCEDURES AND PRACTICES. ONE ITEM OF NONCOMPLIANCE WAS IDENTIFIED: FAILURE TO COMPLETE FORM NRC-4 PRIOR TO EXCEEDING 1.25 REM/QTR.

LAST IE SITE INSPECTION DATE: July 3 through August 4, 1980

INSPECTION REPORT NO: 80-09

SUMMARY

INSPECTION SUMMARY

Inspection on June 11 and 26, (80-08): Confirmatory Measurements including: telephone discussion and closeout of results of a previous sample collection. The inspection involved 0 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

Inspection on July 3 through August 4, (80-09): Routine Resident Inspector inspection of operational safety, bulletin review and activities pertaining to Bulletin 80-17. The inspection involved 93 inspector hours onsite including 20 hours off-shift inspection by one NRC inspector. No apparent items of noncompliance were identified in the areas inspected.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-17/ 03L-0	07/03/80	08/13/80	Sensor Channel D of the Reactor Depressurization System was removed from service to correct the intermittent automatic test circuit alarm.
80-18/ 03L-0	07/10/80	08/04/80	During monthly specific gravity checks Cell 35 and 54 of the battery power supply for Channel C of the Reactor Depressurization System read 1.192 and 1.194, respectively.
80-19/ 03L-0	07/13/80	08/12/80	A visual alarm was noted on a containment pressure indicator on Unit PIS 173 in the control room.
80-20/ 03L-0	07/18/80	08/15/80	One 3 unit cell was defective in the Reactor Depressurization System battery for Channel C.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 6.3.A, DETAILED WRITTEN PROCEDURES SHALL BE PREPARED, APPROVED, AND ADHERED TO FOR SURVEILLANCE AND TESTING REQUIREMENTS. CONTRARY TO THE ABOVE, ON MAY 6, 1980, UNITS 1, 2 AND 3 CONTROL ROOM OPERATORS WERE PERFORMING SURVEILLANCE INSTRUCTION 2, INSTRUMENT CHECKS AND OBSERVATIONS, USING A SECTION WHICH HAD BEEN SUPERCEDED BY AN APPROVED REVISION DATED JULY 10, 1979. (8024 DEFICIENCY)

AS REQUIRED BY 10 CFR 50, APPENDIX B, AND IMPLEMENTED BY TENNESSEE VALLEY AUTHORITY NUCLEAR - OPERATIONAL QUALITY ASSURANCE MANUAL SECTION 2.1 PART II, UPON COMPLETION OF MAINTENANCE ON ANY ITEM OF THE CSSC LIST AND BEFORE RELEASE FOR SERVICE, APPROPRIATE TESTING SHALL BE PERFORMED TO VERIFY OPERATIONAL ACCEPTABILITY. CONTRARY TO THE ABOVE, ON JUNE 3, 1980, THE CONTROL VALVE 12 PRESSURE SENSOR, WHICH SENDS A SIGNAL TO THE REACTOR PROTECTION SYSTEM TO INDICATE TURBINE CONTROL VALVE FAST CLOSURE, HAD MAINTENANCE PERFORMED ON IT AND WAS RETURNED TO SERVICE WITHOUT TESTING OF THE REACTOR PROTECTION SYSTEM TO VERIFY PROPER OPERATION OF THE REPAIRED PRESSURE SWITCH. (8026 INFRACTION)

INSPECTION REPORT NO: 50-259/80-32

SUMMARY

INSPECTION SUMMARY

INSPECTION JUNE 1-30 (80-28): THIS ROUTINE INSPECTION INVOLVED 37 RESIDENT INSPECTOR-HOURS IN THE AREAS OF OPERATIONAL SAFETY MAINTENANCE, NONCOMPLIANCE FOLLOWUP, REPORTABLE OCCURRENCES, REACTOR TRIP FOLLOWUP, PLANT PHYSICAL PROTECTION AND RADIATION SAFETY. OF THE SEVEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN SIX AREAS. ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO TEST A PORTION OF THE REACTOR PROTECTION SYSTEM AFTER MAINTENANCE).

INSPECTION JULY 7-10 (80-29): THE INSPECTION INVOLVED 10 INSPECTOR HOURS ON SITE BY ONE NRC INSPECTOR. THREE INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. AREAS INSPECTED INCLUDED REVIEW OF SECURITY PLAN; SECURITY ORGANIZATION; PHYSICAL BARRIERS (VITAL AND PROTECTED AREAS); LIGHTING; ASSESSMENT AIDS; ACCESS CONTROLS (IDENTIFICATION, AUTHORIZATION, AND BADGING, SEARCH, ESCORTING AND VITAL AREAS); AND ALARM STATION. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN 11 AREAS EXAMINED DURING THE INSPECTION.

INSPECTION JUNE 28 - JULY 4 (80-32): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED APPROXIMATELY 100 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSPECTION AND EVALUATION OF THE LICENSEES INVESTIGATION OF THE UNIT 3 FAILURE TO FULLY INSERT CONTROL RODS FOLLOWING A SCRAM ON JUNE 28, 1980. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

NRC POWER RESTRICTIONS: NONE

ROUTINE POWER OPERATION AFTER COMPLETION OF REFUELING OPERATIONS.

LAST IE SITE INSPECTION DATE: AUGUST 1-31, 1980

INSPECTION REPORT NO: 50-325/80-35

SUMMARY

INSPECTION SUMMARY

INSPECTION JUNE 21-24 (80-27): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 16 INSPECTOR-HOURS ON SITE IN THE AREAS OF PERIODIC TESTING OF DIESEL GENERATOR UNITS USED AS ONSITE ELECTRIC POWER SYSTEMS, LICENSEE ACTIONS ON PREVIOUSLY IDENTIFIED ITEMS, AND REVIEW OF DIESEL GENERATOR TESTING REQUIREMENTS AT IE HEADQUARTERS' REQUEST. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO PROVIDE COMPLETE TEST REQUIREMENTS AND INSTRUCTIONS).

REPORTS RECEIVED FROM LICENSEE

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO THE TECHNICAL SPECIFICATION 6.8.1.C PERIODIC TEST 12.1.2 AND 12.1.1A APPROVED ON APRIL 9 AND MAY 21, 1980. DO NOT COVER THE COMPLETE LOADING ACTIVITIES REQUIRED BY TECHNICAL SPECIFICATIONS AND FSAR IN THAT THE PROCEDURE DOES NOT INCLUDE STARTUP OF ONE FIRE PUMP MOTOR AND A TOTAL OF TWENTY MOTOR-OPERATED VALVE MOTORS. HOWEVER, THE LICENSEE TEMPORARILY REVISED THE PROCEDURE TO INCLUDE THE FIRE PUMP LOADING AT THE TIME OF THE JUNE 21 TEST AS A PARTIAL RESOLUTION OF NRC CONCERNS. THE LICENSEE MADE FURTHER COMMITMENTS TO PERMANENTLY REVISE THE PERIODIC TEST PROCEDURES, TO RESOLVE THE TOTAL CONCERN, PRIOR TO THE PERFORMANCE OF THE NEXT SCHEDULED SURVEILLANCE TEST ON EITHER UNIT. (8024 DEFICIENCY)

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 50.72(A)(6) THE LICENSEE DID NOT NOTIFY THE NRC WITHIN THE REQUIRED TIME FRAME (1 HOUR) FOLLOWING DISCOVERY THAT THE AUXILIARY FEEDWATER SYSTEM WAS INOPERABLE. (DISCOVERED 1:00 A.M., MAY 21, 1980 REPORTED 1255 P.M., MAY 21, 1980).
(8006 INFRACTION)

CONTRARY TO T.S. 3.7.1.2, THE AUXILIARY FEEDWATER SYSTEM WAS INOPERABLE WITH THE REACTOR IN MODE 3 BETWEEN ABOUT 1000 P.M. ON MAY 20 AND ABOUT 1:00 A.M. ON MAY 21, 1980.
(8006 INFRACTION)

CONTRARY TO LICENSE CONDITION 2.C.(4), FIRE PROTECTION ADMINISTRATIVE CONTROLS WERE NOT IMPLEMENTED, IN THAT, A BOTTLE OF ACETYLENE GAS WAS NOT STORED BUT LEFT FREE STANDING OUTSIDE THE INTAKE STRUCTURE.
(8006 DEFICIENCY)

CONTRARY TO LICENSE CONDITION 2.C.(4) THE LICENSEE FAILED TO IMPLEMENT FIRE PROTECTION ADMINISTRATIVE CONTROLS IN THAT EVIDENCE OF SMOKING WAS OBSERVED IN THE CONTROL ROOM PANEL BACKS ON MAY 14 AND 28, 1980.
(8006 INFRACTION)

CONTRARY TO T.S. 6.8.1, THE CONTROL ROOM OPERATORS LOG AND SHIFT SUPERVISORS LOG WERE NOT FILLED IN AS REQUIRED FOLLOWING DISCOVERY OF THE AUXILIARY FEEDWATER SYSTEM INOPERABILITY ON MAY 21, 1980.
(8006 DEFICIENCY)

CONTRARY TO PART H3 OF THE APPROVED PHYSICAL SECURITY PLAN, THE SECURITY FORCE FAILED TO RESPOND TO A VITAL AREA ACCESS ALARM ON MAY 19, 1980.
(8006 INFRACTION)

CONTRARY TO THE APPROVED PHYSICAL SECURITY PLAN, PART H.3, THE SECURITY FORCE FAILED TO RESPOND TO A VITAL AREA ACCESS ALARM ON MAY 15, 1980.
(8006 INFRACTION)

CONTRARY TO PART H3 OF THE APPROVED PHYSICAL SECURITY PLAN, THE SECURITY FORCE FAILED TO RESPOND TO A VITAL AREA ACCESS ALARM ON MAY 16, 1980.
(8006 INFRACTION)

PLANT STATUS:

No significant new information.

- LAST IE SITE INSPECTION DATE: 8/1-31/80

- INSPECTION REPORT NO: 50-317/80-14

SUMMARY

INSPECTION SUMMARY

- 50-317/80-06 - MAY 1-31: ROUTINE, ONSITE REGULAR AND BACKSHIFT INSPECTION BY THE RESIDENT INSPECTOR (35 HRS). AREAS INSPECTED INCLUDED THE CONTROL ROOM AND THE ACCESSIBLE PORTIONS OF THE AUXILIARY, TURBINE, SERVICE, AND INTAKE BUILDINGS; RADIATION PROTECTION; PHYSICAL SECURITY; FIRE PROTECTION; PLANT OPERATING RECORDS; ADMINISTRATIVE CONTROLS RELATING TO DEFEAT OF SAFETY ACTUATION SIGNALS, AND A MEETING WITH A REPRESENTATIVE OF THE FEDERAL BUREAU OF INVESTIGATION. EIGHT ITEMS OF NONCOMPLIANCE WERE IDENTIFIED: (1) INOPERABILITY OF THE AFWS; (2) FAILURE TO REPORT AFWS INOPERABILITY; (3) FAILURE TO LOG AFWS INOPERABILITY; (4) FAILURE TO PREVENT SMOKING BEHIND CONTROL ROOM CONTROL PANELS; (5) FAILURE TO IMPLEMENT FIRE PROTECTION ADMINISTRATION - ACETYLENE GAS BOTTLE NOT SECURED; (6-7-8) THREE FAILURES TO RESPOND TO AREA ACCESS ALARMS ON MAY 15, 1980, MAY 16, 1980, AND MAY 19, 1980.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-032/03L	07/01/80	08/01/80	NO. 12 SERVICE WATER HEAT EXCHANGER OUTLET VALVE WOULD NOT STROKE FULLY OPEN. CAUSED BY CORROSION PRODUCT BUILDUP ON ACTUATOR PISTON ROD.
80-033/03L	07/28/80	07/29/80	NO. 14 CONTAINMENT AIR COOLER WOULD NOT SHIFT TO SLOW SPEED (LOCA SPEED) FROM THE CONTROL ROOM. CAUSED BY A RELAY (ROWAN CONTROLLER) FAILING TO DROP OUT WHEN DEENERGIZED.
80-034/01T	07/16/80	07/30/80	CONTROL ROOM AIR CONDITIONERS TRIPPED OFF LINE DURING HIGH SUMMER HEATING LOAD. CORRECTIVE ACTION TAKEN TO INCREASE LOAD CARRYING CAPACITY BEFORE TRIPPING.
80-035/01T	07/27/80	08/08/80	LICENSED THERMAL POWER EXCEEDED BY 24 MW (2700 LIMIT) DUE TO TUBE LEAKAGE IN SG BLOWDOWN HEAT EXCHANGER RESULTING IN IMPROPER FLOW INPUT TO CALORIMETRIC.
80-036/03L	07/21/80	08/20/80	NO. 11 DIESEL GENERATOR LOST SPEED AND VOLTAGE CONTROL CAUSED BY WATER SPRAY ON CONTROL CABINET DURING HEAT EXCHANGER VENTING.
80-037/01T	07/30/80	08/13/80	DIESEL AIR START PRESSURE SWITCHES INSTRUMENT TUBING NOT SEISMICALLY QUALIFIED DISCOVERED DURING REVIEW OF AS-BUILT CONFIGURATION (IEB 79-14)
80-041/01T	08/12/80	08/26/80	BOTH SERVICE WATER SUBSYSTEMS OPERATED IN A DEGRADED CONDITION WHEN AIR INGRESS OCCURRED FROM NO. 11 INSTRUMENT AIR COMPRESSOR. SYSTEM PRESSURE REMAINED NORMAL.

50-317/80-11 - JUL 1-31: ROUTINE, ONSITE REGULAR AND BACKSHIFT INSPECTION BY THE RESIDENT INSPECTOR (29 HRS). AREAS INSPECTED INCLUDED THE CONTROL ROOM AND THE ACCESSIBLE PORTIONS OF THE AUXILIARY, TURBINE, SERVICE, AND INTAKE BUILDINGS; RADIATION PROTECTION; PHYSICAL SECURITY; FIRE PROTECTION; PLANT OPERATING RECORDS; MAINTENANCE ACTIVITIES; IE CIRCULAR REVIEW; IE BULLETIN REVIEW; REVIEW OF LICENSEE REPORTS AND EVENTS. NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED.

50-317/80-12 - JUL 15-18: ROUTINE, UNANNOUNCED PHYSICAL PROTECTION INSPECTION BY ONE REGION-BASED INSPECTOR (45 HRS) INCLUDING REVIEW OF: SECURITY PLAN; SECURITY ORGANIZATION; PROTECTED AREA PHYSICAL BARRIERS; VITAL AREA PHYSICAL BARRIERS; ACCESS CONTROL (VITAL AREA); ALARM STATIONS; DETECTION AIDS; ASSESSMENT AIDS; COMMUNICATIONS; RESPONSE; FOLLOWUP ON IE BULLETINS #77-08 (LOCKING MECHANISMS) AND #79-16 (VITAL AREA ACCESS CONTROLS AND A FOLLOWUP ON PREVIOUS ITEMS. FOUR ITEMS OF NONCOMPLIANCE WERE IDENTIFIED: (1) FAILURE TO ISSUE WRITTEN PROCEDURE; (2) FAILURE TO MAINTAIN CONTINUOUS COMMUNICATIONS; (3) FAILURE TO CONTROL ACCESS TO THE PROTECTED AREA; (4) FAILURE TO SECURE VITAL AREA PORTAL.

INSPECTION SUMMARY

50-318/80-06 - MAY 1-31: ROUTINE, ONSITE REGULAR AND BACKSHIFT INSPECTION BY THE RESIDENT INSPECTOR (30 HRS). AREAS INSPECTED INCLUDED THE CONTROL ROOM AND THE ACCESSIBLE PORTIONS OF THE AUXILIARY, TURBINE, SERVICE, AND INTAKE BUILDINGS; RADIATION PROTECTION; PHYSICAL SECURITY; FIRE PROTECTION; PLANT OPERATING RECORDS; ADMINISTRATIVE CONTROLS RELATING TO DEFEAT OF SAFETY ACTUATION SIGNALS, AND A MEETING WITH A REPRESENTATIVE OF THE FEDERAL BUREAU OF INVESTIGATION. FOUR ITEMS OF NONCOMPLIANCE WERE IDENTIFIED: ONE FAILURE TO IMPLEMENT FIRE PROTECTION ADMINISTRATIVE CONTROLS (SMOKING BEHIND CONTROL ROOM CONTROL PANELS); AND, THREE FAILURES TO RESPOND TO SECURITY ALARMS: MAY 15, 1980, MAY 16, 1980 AND MAY 19, 1980.

50-318/80-10 - JUL 1-31: ROUTINE, ONSITE REGULAR AND BACKSHIFT INSPECTION BY THE RESIDENT INSPECTORS (29 HRS). AREAS INSPECTED INCLUDED THE CONTROL ROOM AND THE ACCESSIBLE PORTIONS OF THE AUXILIARY, TURBINE, SERVICE, AND INTAKE BUILDINGS; RADIATION PROTECTION; PHYSICAL SECURITY; FIRE PROTECTION; PLANT OPERATING RECORDS; MAINTENANCE ACTIVITIES; IE CIRCULAR REVIEW; IE BULLETIN REVIEW; REVIEW OF LICENSEE REPORTS AND EVENTS. NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED.

50-318/80-11 - JUL 13-18: ROUTINE, UNANNOUNCED PHYSICAL PROTECTION INSPECTION BY ONE REGION-BASED INSPECTOR (48 HRS), INCLUDING: A REVIEW OF: SECURITY PLAN; SECURITY ORGANIZATION; PROTECTED AREA PHYSICAL BARRIERS; VITAL AREA PHYSICAL BARRIERS; ACCESS CONTROL (VITAL AREAS); ALARM STATIONS; DETECTION AIDS; ASSESSMENT AIDS; COMMUNICATIONS; RESPONSE; FOLLOWUP ON IE BULLETINS #77-08 (LOCKING MECHANISMS) AND #79-16 (VITAL AREA ACCESS CONTROLS) AND FOLLOWUP ON OTHER PREVIOUS ITEMS. FOUR ITEMS OF NONCOMPLIANCE WERE IDENTIFIED: FAILURE TO ISSUE WRITTEN PROCEDURE; FAILURE TO MAINTAIN CONTINUOUS COMMUNICATIONS; FAILURE TO CONTROL ACCESS TO THE PROTECTED AREA; AND, FAILURE TO SECURE VITAL AREA PORTAL.

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENTS

New thermal sleeves and elbows, designed by Westinghouse Electric and installed by Power Systems, Inc. were replaced on all Unit 1 steam generators. Low pressure turbines A and B were ultrasonically examined by General Electric Company, for keyway and erosion cracking. No indications reported. (80-10)

PLANT STATUS

Operating routinely.

LAST IE SITE INSPECTION DATE: July 22-25, 1980

INSPECTION REPORT NO: 80-12

SUMMARY

INSPECTION SUMMARY

Inspection on June 11-13, 17-20, 25-26; July 8-11 and 24, (80-10): Review of ISI program, procedures, work activities, and documentation for this refueling outage; follow-up on IE Bulletin 79-37, Cracking in L.P. Turbine Discs; follow-up on potential welding deficiencies in tanks fabricated by Graver Tank Manufacturing Company; review of procedures, personnel qualifications, and installation activities for feedwater thermal sleeve elbows on all Unit 1 steam generators. The inspection involved 92 inspector hours onsite by one NRC inspector. Of the areas examined, one apparent item of noncompliance was identified in one area (failure to develop and implement an indoctrination and training program for QC inspectors).

Inspection on July 22-25, (80-12): Routine, unannounced inspection of operational radiation protection program during refueling and maintenance, including: organization and staffing; training; radiation protection procedures; planning, preparation, and ALARA; exposure control; posting and control; material control; surveys; followup on IE Bulletin and Circulars; and previous noncompliance and unresolved item review. The inspection involved 36 inspector hours onsite by one NRC inspector. No items of noncompliance were identified in any of the 10 areas inspected.

INSPECTION STATUS

ENFORCEMENT STATUS

THE INSPECTOR FOUND A BREACHED FIRE BARRIER IN THE CABLE SPREADING ROOM. THE BARRIER WAS BREACHED WHILE INSTALLING CONDUIT AS PART OF A DESIGN CHANGE COMPLETED IN 1977. THIS WAS NOT IDENTIFIED BY THE LICENSEE DURING A SUBSEQUENT SURVEILLANCE INSPECTION. THIS IS CONTRARY TO LCO 3.19A AND 3.19B. B.
(8011 INFRACTION)

THE DOOR TO THE HPCI PUMP ROOM WAS FOUND PROPPED OPEN. THIS IS CONTRARY TO ADMINISTRATIVE PROCEDURE 1.6 WHICH REQUIRES THAT ALL FIRE DOORS BE CLOSED.
(8011 INFRACTION)

OTHER ITEMS OF INTEREST

PLANT STATUS:

OPERATING AT RATED THERMAL POWER.

LAST IE SITE INSPECTION DATE: August 18 - 21, 1980

INSPECTION REPORT NO: 50-298/80-12

SUMMARY

INSPECTION SUMMARY

Inspection on July 22-26 and August 4-7, 1980 (80-11): Routine, unannounced inspection of followup to previously identified items, Local Power Range Monitoring (LPRM) calibration, core thermal power evaluation, followup on responses to IE Bulletins, followup on LER's, independent inspection effort and the Systematic Assessment of License Performance (SALP) management meeting. Within the six (6) areas inspected, no items of noncompliance were identified in five (5) of the areas. Within the area of independent inspection effort, two (2) items of noncompliance were identified (infraction - failure to control fire doors in accordance with procedures; infraction - failure to maintain fire barrier integrity. As a result of the SALP evaluation no increase in the scope of frequency of inspection effort is planned.

Inspection on August 18-21, 1980 (80-12): Routine, unannounced inspection of followup to previously identified items, housekeeping and cleanliness program, organization and administration, qualification of personnel program, followup on IE Bulletins and followup on LER's. No items of noncompliance or deviation were identified.

START-UP FROM REFUELING SHUTDOWN.

LAST IE SITE INSPECTION DATE: AUGUST 11-15, 1980

INSPECTION REPORT NO: 50-302/80-30

SUMMARY

INSPECTION SUMMARY

INSPECTION JUNE 30 - JULY 3 (80-26): THIS ANNOUNCED INSPEECTION INVOLVED 22 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONTAINMENT INTEGRATED LEAKAGE RATE TESTING AND SAFETY-RELATED PIPING SUPPORT AND RESTRAINT SYSTEMS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JULY 7-11 (80-29): THE INSPECTION INVOLVED 37 INSPECTOR HOURS ON SITE BY ONE NRC INSPECTOR. THE INSPECTION WAS BEGUN DURING AN OFFSHIFT PERIOD; 10 INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. AREAS INSPECTED INCLUDED REVIEW OF THE SECURITY PROGRAM AUDIT, SECURITY ORGANIZATION, PROTECTED/VITAL AREA PHYSICAL BARRIERS, LIGHTING, ACCESS CONTROLS (IDENTIFICATION, AUTHORIZATION AND BADGING; SEARCH; AND VITAL AREAS), ALARM STATIONS, DETECTION AIDS, POWER SUPPLY, AND RESPONSE. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE AREAS EXAMINED DURING THIS INSPECTION EXCEPT FOR THE FOLLOWING TWO ITEMS: 1. DETECTION AIDS - TAMPER INDICATING CAPABILITY COULD NOT BE DEMONSTRATED FOR THE ENTIRE ALARM SYSTEM (INFRACTION); AND 2. RESPONSE - REQUIRED SECURITY EMERGENCY DRILLS WERE NOT CONDUCTED (INFRACTION).

INSPECTION STATUS

ENFORCEMENT STATUS

FAILURE TO ADEQUATELY AND EFFECTIVELY CONTROL ACCESS IN ACCORDANCE WITH A SECURITY PLAN COMMITMENT.
(8018 INFRACTION)

THE LICENSEE FAILED TO ASSESS THE ADEQUACY OF THE SEARCH REQUIRED FOR AUTHORIZATION IN ACCORDANCE WITH SECURITY PLAN COMMITMENTS.
(8018 INFRACTION)

FAILURE TO PROVIDE COMMUNICATION CAPABILITIES IN ACCORDANCE WITH A SECURITY PLAN COMMITMENT.
(8018 INFRACTION)

TECHNICAL SPECIFICATION 4.6.1.2 REQUIRES THAT THE CONTAINMENT LEAKRATE SHALL BE DEMONSTRATED USING THE METHODS AND PROVISIONS OF ANSI N45.4-1972. ANSI N45.4-1972 REQUIRES THAT A DATED LOG OF EVENTS AND PERTINENT OBSERVATIONS SHALL BE MAINTAINED DURING THE TEST. PROCEDURE ST 50.61 "CONTAINMENT INTEGRATED LEAKRATE TEST," ALSO REQUIRES THAT A CONTINUOUS SEQUENTIAL LOG OF EVENTS OCCURRING DURING THE PERFORMANCE OF THE TEST BE MAINTAINED. CONTRARY TO THE ABOVE, A LOG OF EVENTS WAS NOT MAINTAINED FOR THE DURATION OF THE CONTAINMENT LEAKRATE TEST PERFORMED ON JUNE 9 THROUGH JUNE 13, 1980.
(8019 DEFICIENCY)

TECHNICAL SPECIFICATION 6.8.1 REQUIRES THAT WRITTEN PROCEDURES RECOMMENDED IN APPENDIX "A" OF REGULATORY GUIDE 1.33, NOVEMBER 1972 SHALL BE IMPLEMENTED. APPENDIX "A" OF REGULATORY GUIDE 1.33, NOVEMBER 1972, INCLUDES ADMINISTRATIVE PROCEDURES. ADMINISTRATIVE PROCEDURE AD1839.02 "OPERATION AND CONTROL OF LOCKED VALVES" REQUIRES THAT WHEN LOCKED VALVES ARE REPOSITIONED THE APPROPRIATE LOG ENTRIES ARE COMPLETED IN THE LOCKED VALVE LOG. AF599 AND AF608 ARE LOCKED VALVES. CONTRARY TO THE ABOVE, ON JUNE 17, 1980 AT APPROXIMATELY 7:00 A.M. THE INSPECTOR DETERMINED THAT VALVES AF599 AND AF608 WERE IN THE OPEN POSITION AND THE LOCKED VALVE LOG INDICATED THEY WERE CLOSED.
(8019 DEFICIENCY)

TECHNICAL SPECIFICATION 6.8.1 REQUIRES THAT PROCEDURES COVERING THE FIRE PROTECTION PROGRAM SHALL BE IMPLEMENTED. PROCEDURE ST 5016.07 REQUIRES THAT THE INSPECTOR OF FIRE EXTINGUISHERS SHALL SIGN THE INSPECTION TAG OF THE FIRE EXTINGUISHER. THE INITIALED INSPECTION TAG SIGNIFIES COMPLIANCE WITH THE MONTHLY INSPECTION PROCEDURE. CONTRARY TO THE ABOVE, ON JULY 6 AND 20, 1980, THE NRC INSPECTOR OBSERVED THAT SEVERAL FIRE EXTINGUISHERS DID NOT HAVE THEIR INSPECTION TAGS SIGNED FOR THE INSPECTION DURING THE MONTH OF JUNE. SEVERAL OTHER EXTINGUISHERS HAD THEIR INSPECTION TAGS MISSING.
(8019 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENTS

A total of 133 fuel assembly holddown springs were replaced. Of those replaced, 18 were broken. Forty-four new assemblies were loaded for cycle 2. (80-19)

PLANT STATUS

The refueling/maintenance outage continued during the month.

LAST IE SITE INSPECTION DATE: July 21-25, 1930

INSPECTION REPORT NO: 80-24

SUMMARY

INSPECTION SUMMARY

Inspection on June 16-20, 23-27, 30; July 1-3 and 7-11, (80-19): Routine, unannounced inspection of followup on previous Inspection Findings, Containment Integrated Leak Rate Test, TI2515/36, Monthly Surveillance Observation, Monthly Maintenance Observation, IE Bulletin Followup, Onsite Review Committee, Inspection During Long-Term Shutdown, Licensee Event Reports Followup, and Meeting with the Public and Local Officials. The inspection involved 84 inspector-hours during regular shift and 30 inspector-hours during offshifts by the Resident Inspector. Of the 10 areas inspected, no items of noncompliance or deviations were identified in eight areas; three apparent items of noncompliance were identified in the other two areas (failure to keep a log of events during CILRT; failure to document inspection of fire extinguishers; and failure to properly log the position of locked valves).

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-55/ 03L-0	07/09/80	08/08/80	Position indication for ECS room vent. exhaust damper lost.
80-56/ 03L-0	07/09/80	08/07/80	Loss of instrument bus Y-3.
80-57/ 03L-0	07/10/80	08/07/80	Decay heat flow rate less than 2800 gpm while in Mode 6.
80-58/ 03L-0	07/24/80	08/12/80	Loss of decay heat flow.

Inspection on July 22-24, 31; and August 1, (80-22): Inspection of pipe whip restraint modification at Hot Leg risers; licensee implementation of IEB 79-02, IEB 79-04, and IEB 79-14; snubber installations. The inspection involved 45 inspector-hours onsite, at the licensee's A-E, and corporate office by two NRC inspectors. No items of noncompliance or deviations were identified.

Inspection on July 21-25, (80-24): Routine, unannounced inspection of: Environmental Protection, including evaluation of reportable occurrences 78-072-04T-0, NP-39-78-03, NP-09-80-01, and NP-11-80-01; the licensee's program for quality control of analytical measurements; program management and implementation; review of program results; inspection of proper installation and operability of selected sampling stations; Emergency Planning - review of coordination with offsite support agencies; emergency tests and drills; and Confirmatory Measurements - program for quality assurance and quality control of analytical measurements. The inspection involved 74 inspector-hours onstie by three NRC inspectors. Of the seven areas inspected, no apparent items of noncompliance or deviations were identified in six areas; four apparent items of noncompliance were found in one area; (delta T in excess of Technical Specification limits; failure to report exceeding Technical Specification limiting condition of operation; failure to perform required sulfate monitoring at a required interval; and failure to perform required ichthyoplankton monitoring at a required interval).

OTHER ITEMS OF INTEREST

PLANT STATUS

+ Unit 1 shutdown on October 31, 1978 for an extended outage to upgrade ECCS, chemical cleaning and refueling. Outage expected to last through Mid-1986.

+LAST IE SITE INSPECTION DATE: July 7 through August 1, 1980

INSPECTION REPORT NO: 80-13

SUMMARY

INSPECTION SUMMARY

+ Inspection on July 7 through August 1, (80-13): Routine, unannounced inspection of monthly surveillance observation; licensee event reports followup; IE Bulletin followup; training; requalification training; onsite review committee; inspection during long-term shutdown. The inspection involved 238 inspector-hours onsite by 3 NRC inspectors including 112 inspector-hours onsite during off-shifts. Of the nine areas inspected, there were no items of noncompliance identified in eight areas. There was one apparent item of noncompliance (licensed operators failed to keep themselves cognizant of design changes, facility license changes, and procedure changes) identified in one area.

INSPECTION REPORT NO: 80-14

SUMMARY

INSPECTION SUMMARY

Inspection on July 7 through August 1, (80-14): Routine, unannounced inspection of operational safety verification; monthly surveillance observation; licensee event reports followup; IE Bulletin followup; training; requalification training; onsite review committee; inspection during long-term shutdown; and IE Bulletin 80-17 requirements. The inspection involved 238 inspector-hours onsite by 8 NRC inspectors including 112 inspector-hours onsite during off-shifts. Of the nine areas inspected, there were no items of noncompliance identified in eight areas. There was one apparent items of noncompliance (licensed operators failed to keep themselves cognizant of design changes, facility license changes, and procedure changes) identified in one area.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-24/ 03L-0	07/21/80	08/15/80	During normal operations, drywell oxygen concentration indication failed downscale.
80-25/ 03L-0	07/21/80	08/08/80	While performing isolation condenser condensate line hi-flow calibration, DPIS 2-1349 B tripped at 34 inches H20.
80-26/ 03L-0	07/25/80	08/15/80	While checking operating pressure of drywell high pressure ECCS switch 1629B, it was found that pressure switch had been valved out.
80-27/ 03L-0	07/25/80	08/20/80	During power operation water was found in lube oil in one of diesel generator unit and the diesel was declared inoperable.
80-28/ 03L-0	07/27/80	08/15/80	CRD C-11 was determined to be uncoupled and was declared to be inoperable.

INSPECTION REPORT NO: 80-12

SUMMARY

INSPECTION SUMMARY

Inspection on August 4-6, (80-12): Routine, unannounced inspection of previously identified items; control rod exercise and scram time tests; LPRM calibrations; reactivity anomaly determination; and core power distribution limits. The inspection involved 28 inspector-hours onsite by two NRC inspectors including zero inspector-hours onsite during off-shifts. The inspectors were accompanied by one NRC inspector-in-training. No items of noncompliance or deviations were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION II CONSUMABLES (GREASE, OIL AND GASKET MATERIAL) TO BE USED IN SAFETY RELATED SYSTEMS ARE NOT FULLY IDENTIFIED OR CONTROLLED. SINCE NO IMPROPER USAGE WAS IDENTIFIED, A LOWER LEVEL OF SEVERITY IS ASSIGNED.
(8014 DEFICIENCY)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION V AND THE LICENSEE'S PROCEDURE FNP-0-AP-12, THE CONTAINER THAT THE WELD RODS WERE STORED IN WAS NOT LABELED TO PREVENT THEIR USE IN CRITICAL SYSTEMS. SINCE NO IMPROPER USE OF WELD RODS WAS FOUND, A LOWER LEVEL OF SEVERITY IS ASSIGNED.
(8014 DEFICIENCY)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION XVI INADEQUACIES WERE IDENTIFIED IN APRIL 1978 DURING A BI-WEEKLY QA AUDIT. FNP-NC-18-79/7(18), HOWEVER THE ESTIMATED COMPLETION DATE OF THESE INADEQUACIES WAS GIVEN AS 5/18/82. THE QA DEPARTMENT ACCEPTED THIS CORRECTIVE ACTION. THIS IS AN EXAMPLE OF LACK OF PROMPT CORRECTIVE ACTION.
(8014 INFRACTION)

LAST IE SITE INSPECTION DATE: AUGUST 27-29, 1980

INSPECTION REPORT NO: 50-348/80-25

SUMMARY

INSPECTION SUMMARY

INSPECTION JUNE 9-13 AND 16-20 (80-14): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 83 INSPECTOR-HOURS ON SITE AND AT THE COMPANY OFFICES BY 4 REGION BASED INSPECTORS. OVERALL MANAGEMENT WAS REVIEWED BY INSPECTING 36 ASPECTS OF THE OVERALL QUALITY ASSURANCE PROGRAM WITHIN THE FOLLOWING 22 AREAS: RECEIPT, STORAGE AND HANDLING OF EQUIPMENT AND MATERIALS; QA/QC ADMINISTRATION; QA FOR STARTUP TESTING PROGRAM; QA PROGRAM ANNUAL REVIEW; MAINTENANCE; DESIGN CHANGES AND MODIFICATIONS; SURVEILLANCE TESTING; PROCUREMENT CONTROL; RECORDS; TEST AND EXPERIMENTS; TEST AND MEASURING EQUIPMENT; OFFSITE REVIEW; OPERATING STAFF TRAINING; TRAINING AND RETRAINING OF NON-LICENSED PERSONNEL; REQUALIFICATION TRAINING; AUDITS; DOCUMENT CONTROL; OPERATIONAL STAFFING; PREOPERATIONAL TEST RECORDS; OFFSITE SUPPORT STAFF; HOUSEKEEPING AND CLEANLINESS; AND, ORGANIZATION AND ADMINISTRATION. OF THE 22 AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN 20 AREAS; THREE ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (INFRACTION - FAILURE TO PROVIDE DEFINITIVE OR PROMPT CORRECTIVE ACTION FOR IDENTIFIED MATERIAL STORAGE INADEQUACIES; DEFICIENCY - FAILURE - TO FOLLOW PROCEDURE).

INSPECTION JULY 27-31 (80-21): THE INSPECTION INVOLVED 62 INSPECTOR-HOURS ON SITE BY TWO NRC INSPECTORS. THE INSPECTION WAS BEGUN DURING AN OFFSHIFT PERIOD; SIX INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. AREAS INSPECTED INCLUDED REVIEW OF SECURITY PLAN; SECURITY PROGRAM AUDIT; LIGHTING; ALARM STATIONS; DETECTION AIDS; COMMUNICATIONS; COMPENSATORY MEASURES AND FOLLOWUP ON PREVIOUS INSPECTION FINDINGS (UNRESOLVED ITEM). OF THE EIGHT AREAS EXAMINED DURING THE INSPECTION, ONE APPARENT ITEM OF NONCOMPLIANCE WAS IDENTIFIED IN ONE AREA. SECURITY ORGANIZATION - SOME MEMBERS OF THE SECURITY FORCE WERE NOT PROPERLY QUALIFIED TO PERFORM SECURITY FUNCTIONS.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TECHNICAL SPECIFICATION 2.3.B.2, REGARDING AIRBORNE EFFLUENTS ON MAY 12-13, 1980, THE RELEASE RATE FOR HALOGENS AND PARTICULATES WITH HALF-LIVES GREATER THAN EIGHT DAYS EXCEEDED THE LIMIT BY A FACTOR OF 1.3.
(8009 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS:

THE PLANT IS OPERATING AT ABOUT 75% POWER WITH AN OFFGAS RELEASE RATE OF 1630 MICROCURIES PER SECOND AT THE SJAE AND A STACK RELEASE RATE OF 835 MICROCURIES PER SECOND.

LAST IE SITE INSPECTION DATE: 8/28/80

INSPECTION REPORT NO: 50-333/80-12

SUMMARY

INSPECTION SUMMARY

50-333/80-06 - APR 14-18, 23-25: ROUTINE, UNANNOUNCED INSPECTION BY TWO REGION-BASED INSPECTORS (122 HRS) OF: SECURITY PLAN, SECURITY PROGRAM AUDIT, SECURITY ORGANIZATION, PHYSICAL BARRIERS, (PA), (VA), LIGHTING, ACCESS CONTROLS, ALARM SYSTEMS, DETECTION AIDS, ASSESSMENT AIDS, COMMUNICATIONS, TESTING AND MAINTENANCE, COMPENSATORY MEASURES, POWER SUPPLY, RESPONSE, LOCKS, KEYS AND COMBINATIONS, AND RECORDS AND REPORTS, FOLLOWUP ON PREVIOUS ITEMS OF NONCOMPLIANCE, IE BULLETINS NOS. 77-18 AND 79-16 AND IE CIRCULAR NO. 79-03/78-17. TWENTY ITEMS OF NONCOMPLIANCE WERE IDENTIFIED: (1) FAILURE TO FORWARD A CHANGE TO THE PHYSICAL SECURITY PLAN; (2) FAILURE TO SCREEN ALL INDIVIDUALS WHO HAD BEEN GRANTED UNESCORTED ACCESS TO THE PROTECTED AREA; (3) FAILURE TO PROPERLY TRAIN SECURITY FORCE PERSONNEL IN ACCORDANCE WITH THE PHYSICAL SECURITY PLAN; (4) FAILURE TO PROPERLY TRAIN CONTROL ROOM OPERATORS ON THE OPERATION OF THE SECONDARY ALARM AND TO DOCUMENT SUCH TRAINING; (5) FAILURE TO PROVIDE PROTECTION TO A PORTION OF THE PROTECTED AREA BARRIER THAT WAS ADJACENT TO THE SECURITY BUILDING; (6) FAILURE TO INSURE THAT THE EMERGENCY EXIT DOOR COULD ONLY BE OPENED FROM THE INSIDE; (7) FAILURE TO INSTALL STANDARD LOCKS AND ALARMS AND MAINTAIN THE DOUBLE BARRIER CONCEPT ON ONE VITAL AREA; (8) FAILURE TO HAVE AN INDIVIDUAL IN A BULLET RESISTANT STRUCTURE TO GRANT UNESCORTED ACCESS TO THE PROTECTED AREA; (9) FAILURE TO PURGE THE SECURITY PHOTO BADGES AFTER THEY HAD EXPIRED; (10) FAILURE TO CONDUCT "HANDS-ON" SEARCHES OF 5% SELECTED RANDOMLY); (11) FAILURE TO USE ARMED PERSONNEL FOR VEHICLE ESCORTS INTO THE PROTECTED AREA; (12) FAILURE TO INSURE THAT AN ALARM OCCURS EACH TIME AN UNAUTHORIZED KEY CARD IS USED; (13) FAILURE TO INSURE THAT THE CENTRAL ALARM STATION WAS NOT VISIBLE FROM OUTSIDE OF THE PROTECTED AREA; (14) FAILURE TO INSURE THAT THE RADIATION PATTERNS OF ADJACENT SENSOR ZONES OVERLAP; (15) FAILURE TO HAVE AN OPERABLE BACK UP COMMUNICATIONS SOURCE; (16) FAILURE TO MAINTAIN THE BULLET RESISTING PROPERTIES OF THE ACCESS CONTROL FUNCTION AT THE AUXILIARY ACCESS CONTROL POINT; (17) FAILURE TO MAINTAIN THE RADIATION DETECTORS IN OPERABLE CONDITION; (18) FAILURE TO MAINTAIN ADMINISTRATIVE CONTROLS ESTABLISHED FOR THE ISSUANCE OF SECURITY KEYS; (19) FAILURE TO ADEQUATELY MAINTAIN THE VISITOR REGISTRATION LOG; (20) FAILURE TO ADEQUATELY MAINTAIN VITAL AREA PATROL LOG.

50-333/80-09 - MAY 14-16: SPECIAL, UNANNOUNCED INSPECTION BY TWO REGION-BASED INSPECTORS (32 HRS) TO FOLLOWUP ON THE SITE RELEASE OF RADIOIODINE ABOVE THE TECHNICAL SPECIFICATION RELEASE RATE LIMIT. ONE ITEM OF NONCOMPLIANCE WAS IDENTIFIED: FAILURE TO ADHERE TO TECHNICAL SPECIFICATIONS REGARDING RELEASE RATES.

50-333/80-11 - JUN 23-27: ROUTINE, UNANNOUNCED INSPECTION BY ONE REGION-BASED INSPECTOR (41 HRS) OF INSERVICE INSPECTION ACTIVITIES, WALK THROUGH INSPECTION OF TORUS AND INSPECTION OF LICENSEE RESPONSE TO IE BULLETIN NO. 80-13. NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED.

NRC POWER RESTRICTIONS: NONE

LAST IE SITE INSPECTION DATE: July 28 - 31, 1980

INSPECTION REPORT NO: 50-285/80-12

SUMMARY

INSPECTION SUMMARY

Inspection on June 30 - July 29, 1980 (80-11): Routine resident inspection of (1) Operational Safety Verification; (2) Post-refueling Tests; and (3) Observation of Annual Emergency Drill. The inspection of on-site activities by the resident inspector included 176 inspector hours. In the three (3) areas examined, no deviations or items of noncompliance were identified.

Inspection on July 28-31, 1980 (80-12): Routine, unannounced inspection of the licensee's: (1) organizational structure and the qualifications/experience of personnel assigned to key management postions: and (2) the calibration program for safety-related instrument systems. The inspection consisted of forty (40) hours on-site and one (1) hour at the district office by two (2) inspectors. Of the two (2) areas inspected, no items of noncompliance or deviations were noted. No new enforcement actions were identified by the licensee performance evaluation. As a result of the SALP evaluation no increase in the scope of frequency of inspection effort is planned.

5. Design Electrical Rating (Net MWe): 330
6. Maximum Dependable Capacity (Gross MWe): 342
7. Maximum Dependable Capacity (Net MWe): 330
8. If Changes Occur in Capacity Ratings Above Since Last Report, Give Reasons:
NONE
9. Power Level To Which Restricted, If Any (Net MWe): 231
10. Reasons for Restrictions, If Any:
NRC RESTRIC. 70% PENDING RESOL OF TEMP FLUC

	MONTH	YEAR	CUMULATIVE
11. Hours in Reporting Period	744.0	5,855.0	10,272.0
12. Hours Reactor Was Critical	619.4	4,343.1	6,875.9
13. Reactor Reserve Shutdown Hours	.0	.0	.0
14. Hours Generator On-Line	517.7	2,974.9	3,957.1
15. Unit Reserve Shutdown Hours	.0	.0	.0
16. Gross Thermal Energy (MWH)	217,522	1,350,115	1,828,070
17. Gross Electrical Energy (MWH)	66,793	429,129	569,925
18. Net Electrical Energy (MWH)	60,272	393,379	516,963
19. Unit Service Factor	69.6	50.8	38.5
20. Unit Availability Factor	69.6	50.8	38.5
21. Unit Capacity Factor (MDC Net)	24.5	20.4	15.3
22. Unit Capacity Factor (DER Net)	24.5	20.4	15.3
23. Unit Forced Outage Rate	24.5	30.1	44.0

24. Shutdowns Scheduled Over Next 6 Months (Type, Date, and Duration of Each):
NONE
25. If Shut Down At End of Report Period, Estimated Date of Startup: 10/01/80

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
80-15	08/04/80	F	65.2	A	3				REACTOR SCRAM AND TURBINE TRIP OCCURRED DUE TO LOSS OF ALL FOUR CIRCULATORS.
80-16	08/16/80	F	102.7	A	2	80-45	AD	PIPEXX	TURBINE TRIPPED AND REACTOR MANUALLY SCRAMMED AS A CONSERVATIVE MEASURE DUE TO RUPTURE OF A HYDRAULIC OIL SUPPLY LINE.
80-17	08/29/80	S	58.4	B	1				FOLLOWING A TURBINE RUNBACK AS A RESULT OF PERSONNEL WORKING ON THE EHC SYSTEM, THE TURBINE WAS MANUALLY TRIPPED AND THE REACTOR SHUTDOWN. THIS BEGAN THE SCHEDULED SHUTDOWN FOR SURVEILLANCE TESTING.

SUMMARY

THE UNIT OPERATED AT 50% POWER DURING THE MONTH AND INCURRED THREE OUTAGES - TWO FOR TURBINE TRIPS AND ONE FOR SURVEILLANCE TESTING. THE UNIT CONCLUDED THE MONTH IN A MAINTENANCE SHUTDOWN.

GINNA

NRC POWER RESTRICTIONS: NONE

FACILITY DATA

Facility Description

1.	Location (state/countv) (nearest population center)	New York/Wayne 15 miles NE of Rochester
2.	Electric Reliability Council	Northeast Power Coordinating Council
3.	Type of Reactor	PWR
4.	Power Level (MWT)	1520
5.	Design Electrical Rating (MWE Net)	470
6.	Date of Initial Criticality	November 8, 1969
7.	Date of Commercial Operation	July 1970
8.	Condenser Cooling Method	Once Through
9.	Condenser Cooling Water Source	Lake Ontario

Utility & Contractor Information

10.	Licensee	Rochester Gas & Electric Corporation
11.	Corporate Address	89 East Avenue Rochester, New York
